1. The value of a pension to a Widow 30 and Two Children 11 and 17 is obtained as follows:

Table II—30 and 11 . . . . .	<b>\$462.339</b>
III—Addition for 17 . . . . .	9.818
Value for each \$100 of deceased's wages . . . . .	<b>\$472.157</b>

2. The value of a pension to a Widow 30 and Three Children 5, 11 and 17, is obtained as follows:

Table II—30 and 5 . . . . .	<b>\$504.006</b>
III—Addition for 11 . . . . .	61.719
III—Addition for 17 . . . . .	9.818
Value for each \$100 of deceased's wages . . . . .	<b>\$575.543</b>

*NOTE:—That Table III is used for both second and third Child.*

3. The value of a pension to a Widow 30 and Four Children 2, 4, 7 and 8 is obtained as follows:

Table II—30 and 2 . . . . .	<b>\$521.672</b>
III—Addition for 4 . . . . .	109.481
III—Addition for 7 . . . . .	90.495
IV—Addition for 8 . . . . .	64.352
Value for each \$100 of deceased's wages . . . . .	<b>\$786.000</b>

P R E F A C E .

Section 16 of Article 2 of the Workmen's Compensation Act of New York, (which went into effect in July 1914) provides that the surviving wife (or dependent husband) of a decedent killed by accident, is entitled until re-marriage, to a pension of 30% of the average annual wage of the deceased, together with an immediate payment of two years' compensation in one sum. If there be a surviving child or children under the age of 18 years there shall be paid to each such child, until the attainment of age 18, a pension of 15% of the annual wage of the deceased, except that during the lifetime of the surviving wife (or dependent husband) each child's pension shall be 10% only. The total annual amount paid shall in no case exceed 66⅔ per centum of said annual wage. If there be no surviving wife (or dependent husband) a pension of 15% of deceased's annual wage with the same limits as to age (18) and as to total amount (66⅔ per cent) is paid to children and other beneficiaries.

The values of the above benefits at any date may be found from the following Tables. The headings of the several Tables sufficiently indicate the information to be derived therefrom and the examples appended will make the matter clear. It must be specially noted that in order to find the value of benefits payable to a widow with three or more children the additional values on account of *both the second and third* children are derived from Table III.

Table IX gives the values of benefits payable to children alone, and such values may be found by the addition of the tabulated values for the particular ages in question.

As far as the present value of benefits payable to a widow and children is concerned we may ignore all children after the eighth, and in the case of benefits payable to children alone we may ignore all children after the ninth.

The calculations have been made on the basis of the Danish Female Survivorship Tables and the Dutch State Insurance Fund Remarriage Table.

Interest has been taken at 3½% and values are tabulated on the basis of an annual salary of \$100.

The commutation columns used in the construction of these Tables, as well as other values, are also given. They will be found useful in the valuation of death benefits payable under the varying provisions of workmen's compensation acts.

For further explanations concerning these Tables reference may be made to Page 83 of Vol. XVI of the Transaction of the Actuarial Society of America where the mathematical basis of the Tables is fully explained.

It will be noticed that there are certain slight discrepancies between the values given in the accompanying Tables and those given in the Transactions of the Actuarial Society. The differences are due to the

graduation of the Marriage Experience, the New York Insurance Department standard being used in the present Tables, while in the Transactions of the Actuarial Society a special graduation was made of this rate.

The Tables were calculated by a continuous process and reference to the Transactions of the Actuarial Society will show that the various terms which go to make up the values in one Table are contained in the following Table, the only change being in the factors by which the annuities are multiplied; by this means an efficient check was introduced into the work.

In this case of Tables IV to VII correct values were computed for ages 20, 22, 25, 27, 30 and every two following ages of the widow, the other values being found by interpolation. The interpolated values are slightly greater than the correct values, but the difference may be neglected for all practical purposes.

The calculated values of Table VIII showed variation which it would not be desirable to keep in a Table of this nature, and certain modifications were made by graduation so as to give safe values. The values were calculated for every three ages of the child, other values being obtained by interpolation.

It will be observed that certain of the values tabulated are without practical significance. These have been calculated only for the sake of completing the tables.

The Author desires to express his thanks to Mr. Alex. T. Maclean, F. F. A., F. A. S. for valuable assistance in the publication of this book and to Mr. S. Milligan for many hours of his leisure time.

**E. OLIFIERS.**

Rio de Janeiro,  
23rd August, 1915.
