Herbert R. Gordy, Physical Science Aid

ABSTRACT

Water temperature data obtained during nine cruises of the M/V *Theodore N. Gill* off the south Atlantic coast of the United States are further processed and organized in a much more usable and readily available form. Surface water temperatures by season are presented graphically.

INTRODUCTION

A general survey of those waters adjacent to our coast in the region from Cape Hatteras on the north to the Florida Straits on the south was begun in 1953 by the U. S. Fish and Wildlife Service in cooperation with two other Federal agencies and two State agencies. Nine cruises over a basic station plan (fig. 1) were completed with the vessel *Theodore N. Gill* from February 1953 to December 1954.

All of the basic physical oceanographic, biological, and chemical data, together with procedures and methods, have been published by individual cruise; (Anderson, Gehringer, and Cohen, 1956a and 1956b; and Anderson

and Gehringer, 1957a, 1957b, 1958a, 1958b, 1959a, 1959b, and 1960).

This is the first in a series of reports to further process the physical oceanographic and chemical data preparatory to a summarization of conditions along the south Atlantic coast of the United States, as revealed from the nine *Gill* cruises. The data will also be organized in a much more usable and readily available form for fisher biologists in their studies of the fishes, shrimps, and other organisms of the region.

Acknowledgments

We appreciate the assistance of several members of the staff of the Bureau of Commercial Fisheries Biological Laboratory, Brunswick, Georgia, who aided in various ways: Jack W. Gehringer, Mary E. Cobb, Eleanor Y. Waters, Mabel Jo Knight, and E. Reid Poe.

Note.--W. W. Anderson, J. E. Moore, H. R. Gordy, Bureau of Commercial Fisheries Biological Laboratory, Brunswick, Georgia.

PROCEDURES

Sections

There are 16 sections as established from the pattern of east-west lines of stations (fig. 1). These are named and composed of stations as established in the individual cruise reports and shown in tables 2 to 14.

www.ifbof.com.cn

Areas

The region is divided into three areas--southern, central, and northern. Each area is split into three sub-areas: inner shelf, which extends generally from the beaches seaward to about 15 fathoms; outer shelf, from about 15 fathoms seaward to about 100 fathoms; and offshore, mostly in the Gulf Stream. This is illustrated in figure 2, together with the stations comprising each sub-area.

Data from the special stations and standard station are excluded from this division and are presented separately.

Seasons

Four general seasons are applied--winter (Cruises 1 and 5), spring (Cruises 2 and 6), summer (Cruises 3, 7, and 8), and fall (Cruises 4 and 9).

General

Temperature data used in compilation of the various tables were the interpolated and calculated data from the nine *Gill* cruise reports.

Basic temperatures are given to the hundredth of a degree, and averages to the nearest tenth of a degree.

No data below 1,000 meters standard depth are included--such were available on only a few stations.

Profiles of the sections, by cruise, were published in the individual cruise reports.

Average surface water temperatures for the four seasons, and for

areas near the special stations and standard station, are shown in figures 3 to 6.
