TRUSTEES' REPORT.

To His Excellency, JOHN P. ALTGELD, *Governor:*

SIR:—The Board of Trustees of the Illinois Eastern Hospital for the Insane, herewith transmit to your Excellency the report of Dr. Clarke Gapen, the Superintendent of said Institution, showing its present condition and the condition of its inmates, and describing in part the many improvements made and reforms instituted during their administration.

We have reason to feel an honest pride in the results of our stewardship during the past biennial period, and to hope that your Excellency will find that commendable work has been done of both administrative and philanthropic character. We especially invite your attention to the results of the operation of the bid system of purchase (which you yourself inaugurated); to the change in the character of the Institution from the asylum to the hospital basis; to the much improved physical condition of the institution; to the better food and laundry service; to the introduction of supplemental irrigation, by which enormous crops of fresh vegetables are assured; to the almost perfect methods of production and handling of milk introduced. We are also proud to be able to state that during the past biennial period a strictly non-partisan service has been maintained in the institution, fitness and the quality of the service alone determining the selection and retention of an officer or employé. This we have recognized as in accordance with your wishes expressed at the Conference of Charities, October, 1893. We also transmit herewith the report of Secretary and Treasurer Mr. A. L. Granger, showing in detail the receipts and disbursements during the biennial period. We would also recommend that the following appropriations be asked of the Fortieth General Assembly:

Chapel, gymnasium and school building	$25,000 00
For filtering system	20,000 00
For remodeling central heating and power plant	10,000 00
For improving plumbing system	5,000 00
For repairs of slate roofs	5,000 00
For live stock, farm implements and farm improvements, per annum	3,000 00
For additional farm lands	15,000 00
For improvement and extension of electric plant, per annum	5,000 00
For removal and reconstruction of rendering and soap house	2,000 00
For maintenance and equipment of pathological department, per annum	2,500 00
For library and reading room, per annum	1,000 00
For horticultural building, including green house and conservatory	10,000 00
For furniture fund, per annum	10,000 00
Cement walks	5,000 00
Painting, per annum	10,000 00
Improvement of grounds, per annum	3,000 00
For drainage and sewerage, per annum	2,000 00
For the extension of park system, per annum	2,000 00
For Surgical building and equipment	10,000 00
For Nurses' Home for Women	20,000 00
For general improvements and repairs, per annum	25,000 00
Ordinary fund, per annum	308,000 00

In conclusion, your Board would respectfully report that from one to two meetings per month have been held for the purpose of inspecting the Institution, the condition of its inmates, and the auditing of its accounts. We have found a steady and marked improvement in the sanitary conditions and the appearances within and without the buildings. The same may be said with regard to the condition of the grounds, which have been much improved and extended.

Finding that through economies effected mainly by the bid system of purchase we were enabled to effect a steady and continuous saving of the ordinary fund, the Superintendent was authorized to use therefrom for the betterment of the conditions of the Institution itself; in other words, to employ labor, etc., in making improvements and repairs badly needed, and which could not have been otherwise effected. The improved condition of the Institution within and without we feel fully justifies the expenditures.

We would express our hearty appreciation of the services rendered by the officers of the institution in the cause of humanity and good institutional administration; and we believe it within the bounds of truth to say, that in no hospital of its class or size can be found a corps of more worthy or efficient employés.

Commending the enclosed reports to your consideration, and trusting that we have rendered a satisfactory stewardship, we remain,

Yours, very respectfully,

EDMUND SILL, *President.*
J. W. ORR.

SUPERINTENDENT'S REPORT.

DR. CLARKE GAPEN, SUPT.

To the Honorable Board of Trustees:

GENTLEMEN:—My duties under the law being of the two-fold character of financial agent and executive officer of the institution, it becomes my duty to report to you for the biennial period beginning July 1, 1894, and ending June 30, 1896, in both these capacities. In discharge of my duties as your financial agent I have to report the expenditure for the year ending June 30, 1895, of $322,702.86 from the ordinary fund of $331,487.52, appropriated and collected, leaving a balance in your treasury to the credit of said ordinary or maintenance fund of $8,784.66. Also to report the aggregate expenditures from the various special funds of $28,372.60, leaving aggregate unexpended balances of $4,863.52 in these funds. Also to report the expenditure for the year ending June 30, 1896, from the ordinary or maintenance fund of $361,417.33, appropriated and collected, the sum of $333,810.94, leaving a balance or surplus in your treasury to the credit of said ordinary fund at the end of the biennial period of $27,606.39. Also to report the expenditure from the special funds of $59,274.21, leaving unexpended special funds aggregating $6,590.31.

As your treasurer's report, and the statement which accompanies this report, fully explains these expenditures, I will not enter into further detail in regard to them here, except to explain a feature of these reports as made under the present law, which, if unexplained, might leave a wholly wrong impression. Under the present method of accounting all expenditures made out of the ordinary fund are charged up as per capita expense. This ordinary fund is appropriated to be expended at the discretion of your honorable Board for the maintenance and betterment of the conditions of the Institution and its inmates. The law is wisely silent as to the details of this expenditure.

By reason of economies, the result largely of the introduction of the competitive bid system of purchase, you have been enabled to save a considerable percentage of this fund after all expenditures for maintenance have been met. A portion of this you have wisely, I think, authorized me to expend in betterments and repairs badly needed, the institution having been found in a very badly run down condition when it came into your hands. These repairs and betterments being largely in the nature of permanent improvements, it is not fair that they should be charged up to the per capita expenditure for the year or even of the biennial period. But you are confronted with the necessity of either not making these badly needed repairs and improvements or having to show increased per capita expense. In fact, the present method of reporting expenditures places a premium upon inactivity, lack of enterprise, and poor stewardship.

The facts in our own case are as follows: Special appropriations for improvement and repairs have always been inadequate to maintain even the repairs in this mammoth institution, consisting, as it does, of nearly seventy scattered buildings, covering an area of about eighty acres, many of them being wholly of wood, and nearly all in large part of that material. Moreover, the system of reports I mention having been in vogue for many years and presenting the constant temptation of lower per capita expense to be gained by the neglect of these improvements and repairs, the dilapidation had been cumula-

tive. Floors and porches were found in a state of partial decay; roofs were leaking, plastering falling; the exterior wood and tin work falling into decay through rot and rust; the interiors everywhere dingy, dark and cheerless for want of paint and furniture. Lawns, where they existed at all (less than half the present area) were in poor condition for want of attention and water. The fence, if such it might be called, enclosing the front of the grounds, consisted in about equal parts of dilapidated boards, hedge and barb wire. One cement walk alone existed. The visitor who could not afford a carriage, plodded his way from the end of the street-car line to the administration building along the common drive.

It is pleasant to note that during the three years of your administration all this has been changed. The present conditions, both exterior and interior speak for themselves. The visitor steps from the street-car upon a cement platform, and finds a wide cement walk leading him to the administration building. More than a hundred thousand square feet of cement surface having been laid for walks and other purposes. A steel fence 2,700 feet in length, of neatly ornamental design, encloses the front of the grounds, and stone gate posts with iron gates mark the entrance. Flowers abound in a hundred beds; finer and more extensive lawns, consisting as they do of over a hundred acres, are not to be found in the State, if even in the United States. A hundred lawn-mowers in the hands of patients and their attendants not only keep these lawns smooth and even, but furnish the patients with light, pleasant and healthful exercise. An abundant water supply makes it possible, even in periods of severest drouth, to keep them fresh and green by the aid of hundreds of sprays kept in operation night and day. Much pleasure is derived by our patients from the almost unlimited enjoyment of these lawns and flowers, it not being unusual to find 2,000 patients and their attendants out upon them at one time.

The entire wood and tin work of the nearly seventy buildings has been painted once and a part twice in the present biennial period. The interiors have been painted or water-colored in bright, warm and cheerful colors; cheerful carpets put upon the floors, pictures upon the walls, and much substantial and comfortable furniture added. The importance of these last mentioned improvements can only be appreciated by those compelled to spend much time in confinement or semi-confinement, and especially when it is remembered that those who must spend many weary days and months, possibly even years, are often sufferers from forms of brain disease, which make them peculiarly susceptible to gloomy or unpleasant surroundings.

Many of these very desirable improvements and others not enumerated could never have been effected except as a result of the expenditures of moneys saved from the maintenance fund, and added to the sums specially appropriated. Some idea of the magnitude of the work done in these directions may be had from the fact that during the biennial period in addition to special funds $95,738.83 has been expended from the ordinary funds for improvements, repairs, painting, furniture, machinery. tools, etc. These may seem like large sums, but will not appear so to one who is familiar with the magnitude of the place.

In all fairness, therefore, we think the sums expended from the ordinary funds for these betterments, which are in the nature of permanent improvements, should be deducted. This would leave the cost of maintenance for the biennial report $484,116.37 or $116.10 per capita per annum.

The net per capita expense even as calculated under the method in vogue is, however, only $138.71 for 1894-5, and $138.62 for 1895-6. This compared with cost per capita in other states and in all the northern states for the same period gives the following result:

Cost of Maintenance in Hospitals for the Insane.

("Net" means deducting cost of clothing and incidentals.)

COMPETITIVE BID SYSTEM OF PURCHASE.

The saving above noted and the betterments made possible by the expenditure of the moneys thus saved, has been the direct consequence of the competitive bid system of purchase, inaugurated by Governor Altgeld.

To this system has been due such great economies in the administration of the public institutions of this State, and this Institution has been so greatly its beneficiary, that I feel it my duty to dwell somewhat at length upon it.

It is conceded by all, I believe, that no chief executive has ever devoted so much personal attention to the affairs of the institutions of the State of Illinois, as His Excellency Governor Altgeld. In April, 1894, he called a meeting of the members of boards and superintendents of all State institutions at the executive office, for the purpose of stating his policy in reference to these, and for the further purpose of eliciting discussion of various subjects of importance connected therewith. At that meeting the Governor made the announcement that the "Purchasing Agent must go;" substituting therefor the competitive bid system of purchase, and outlining a simple method of instituting it.

This institution having been the largest purchaser under the new system, and having adhered strictly to it in all other than emergency purchases, it now becomes interesting to ascertain what have been the resulting benefits.

A library of directories and catalogues, now numbering 3,000, indexed both by names and articles, furnishes us complete information with regard to all manufacturers in the United States, and of the wholesalers and jobbers in every line.

A numbered bidding sheet contains on its face the following:

No.....

Proposal for.....

ILLINOIS EASTERN HOSPITAL FOR INSANE.

HOSPITAL, ILLINOIS.

.....

.....

Proposals for furnishing the attached schedule of supplies, subject to the conditions printed on the back of this sheet, will be received at the office of the Superintendent until six p. m., ...189 .

Please Attach Prices and Sign and Return this Sheet.

Quantity.	Articles.	Net Price.	Per.
	(Discounts for cash should be distinctly stated.)		
	.....propose to furnish the above named articles, delivered F. O. B., Kankakee, Illinois, at the prices affixed.		
	Signature.....		
	Address.....		
	Dated.....		

with as clear a detailed specification as possible of just what is desired, and on its back the general specifications, which, it will be observed, are in explicit terms, made a part of the contract:

SPECIFICATIONS.

All articles furnished must be delivered F. O. B., Kankakee, Ill., (unless otherwise agreed) and in case the same amounts to a carload, F. O. B., Hospital switch, at the Illinois Eastern Hospital for the Insane.

2—SAMPLES. Bidders are requested to furnish samples of the articles bid upon in all cases. Sample may be billed to the Institution, and if kept will be

paid for at price quoted in bid, otherwise will be returned to the bidder at his expense. When samples are necessary to judge of an article, bids unaccompanied by sample will not be considered. Bidders must attach to each sample a plain card or tag on which must be marked with black ink the name of the sender and the number and price of the sample. Samples of the articles bid for must be delivered at the office of the Hospital on or before the date named for closing bids. They must be of ample size to enable a correct opinion to be formed of the article offered and admit of thoroughly testing them. Samples of inferior goods will not be considered.

3—Bids. Bids must not be enclosed in packages containing samples.

4—All articles will be subjected to a rigid inspection and the bidders are cautioned that full compliance with specifications in schedule will be insisted upon.

5—No articles will be received not in accordance with the standard fixed in specifications.

6—All articles received under any award must, in all cases, be like the standards or samples submitted. If any are delivered differing from these, they will be, whenever such discovery is made, returned at the expense of the seller. *This refers to all supplies purchased at this office.*

7—In making the awards the right will be reserved to increase or diminish the quantity of any of the articles embraced in the attached schedule.

8—All articles will be subject to the customary *Trade Tare* which falls within the said rule in the general market.

9—The right to reject any or all bids is reserved, and to accept any article at price quoted without the acceptance of the entire bid.

10—When no specification as to grade or quality is made the standards of the U. S. Government are to be understood.

Clarke Gapen,
Superintendent.

The bidder is left free either to bid upon the exact thing specified, or if he knows of, or deals in what he deems a better thing for the purpose, he may substitute it therefor.

When this bidding sheet is filled out and signed it becomes a contract which the Institution may close by a proper acceptance. In practice, the bid sheets, upon being returned, are accompanied by letters, catalogues, etc., which, in themselves, are a source of much valuable information, as these letters are from experts in these lines, and point out merits in respect to articles offered by them, and demerits of articles offered in competition therewith, enough to constitute a liberal education in trade. Not a word of it all is overlooked. Every letter relating to any bid is filed therewith and all information carefully collated. The time of closing the bid having arrived, a tabulation sheet is prefixed and a tabulation made of the whole by means of which one may, at a glance, compare the various bids. The following determination sheet is then affixed:

Illinois Eastern Hospital for the Insane.

Kankakee, Ill.,.....189 .

Report on Bid No..... On.....

This bid is respectfully referred to..... and ..... and.....for examination of samples and consideration. Examination and consideration to be based upon the following: The samples submitted by the firm or party offering the lowest price is to receive first consideration. If satisfactory, (that is, meets the requirements of the request for proposal) that proposal is to be recommended for acceptance. If not satisfactory, the reason for disapproval to be noted in the blank below, and the next lowest priced sample taken up for consideration, and so on until a satisfactory sample is reached, which is then to be recommended for acceptance, in each case stating in writing the reason for acceptance or rejection.

Clarke Gapen.

Lowest bid of.....satisfactory and
.....for the following reasons:.....
(Approved or disapproved.)
.....

Second lowest bid of.....satisfactory and

Sixth lowest bid of.....satisfactory and
.....for the following reasons:.....
(Approved or disapproved.)
.....

.....
.....
.....

The whole matter is now ready for consideration and recommendation as to purchase. It will be noted that all samples must be considered in the inverse order of prices; that is to say, the lowest priced sample must first receive consideration. If the quality of this, as determined by samples, is satisfactory, or if the guarantee offered is sufficient, assuming it an article of which a sample cannot be submitted, the whole matter ends there, so far as the matter of purchase is concerned, the sample being put aside to be used in comparison with the supply when received. In case the lowest priced article offered is not satisfactory, this fact, together with the reason therefor, is stated in writing, and the second lowest priced article taken up for consideration, and so on till a satisfactory sample is found. The system, we believe, commends itself not only by its simplicity but by its elasticity.

The following tabulation of purchases made during the quarter ending June 30, 1896, will give some idea of the economies effected through it.

The following tabulation is not offered as fully illustrating or proving the merits of the system, but as a suggestion of its workings as a method of purchase. While it must be admitted that in many instances the parties bid upon different grades of the same article, it is yet true that the specifications stated as nearly exactly as possible what grade was wanted, and in fact quotations were made intelligently, and prices given related very closely to the same class of goods. Where the bid has shown a wide range in price on account of qualities, the same has been omitted from this tabulation. The article purchased in every case was satisfactory and of good quality or it was rejected. The highest price has been assumed to be the ordinary wholesale market price. In fact (as would naturally be the case, where the bidder enters into competition at all) the highest price in this tabulation is below the ordinary wholesale market price, as has been ascertained by investigation.

But this is not all. Purchases are made quietly and through correspondence. The hours spent each day with the salesmen of innumerable establishments are saved, and the confusions resulting inevitably from such encounters wholly avoided. Representatives of commercial houses are always welcomed and afforded an opportunity to freely examine purchases made to

ascertain the class and character of goods desired, but the fact that no immediate sale can be effected, deters visitation by those who come merely in the hope of effecting such.

www.libtool.com.cn

The fact that we rarely see a representative of the firm of which a purchase is made, or know anything about the house, except as we learn from the trade directories and through the correspondence and samples offered, reduces the whole matter to the simplest kind of business proposition, the only elements of which are quality and price. These examples, together with a study of the following tabulation, will, I think, convince any man in trade that the competitive bid sheet is a better buyer than any purchasing agent.

TABULATION OF PURCHASES—QUARTER ENDING JUNE 30, 1896.

Wire cloth	62 rolls	2 68	1 15	6 90	133	9 18	
				$50,932 97		$15,299 51	

Total cost of articles tabulated, $50,932.97. Total cash gain on above purchases, $15,299.51. Per cent. gain, 30 3-10.

As illustrating further the merits of the bid system, I cite the following experience: I recently requested our steward to make some purchases, and to make a special effort to get the very lowest wholesale prices he could obtain. I am satisfied that he did so. I then took those bills and made them into bids and sent them out. A purchase of $52.22 I found, could have been made for $34.68; and a purchase of $94 for $81. A purchase of $180.80 could have been made for $139.50.

MEDICAL, SCIENTIFIC AND EDUCATIONAL.

The medical and scientific work of the Hospital has been the study, both clinically and pathologically, and the care and treatment of an average of 2,095.05 patients in the year 1894–5, and of an average of 2,084.05 during the years 1895–6; of an average of 2,089.77 in the biennial period.

In this work we have endeavored to make a distinct advance, and to make it along lines somewhat new. I am convinced that we are at the opening of a era in the study of that group of neuroses which has heretofore been classified under the general term insanity. Insane ideation being a fact of so much importance from the legal standpoint, so necessary in determining questions of responsibility and accountability, it has also been allowed to thrust itself forward into the field of medical science, and has there assumed an importance not justified by its value as a fact. It is much to the discredit of medical science that we have received not only most of our ideas, but the very terms we use regarding insanity, so called, from the law. The word "insanity" (unsound) itself comes from that source, the same idea being there used in relation to opinions and reasonings, as well as mental conditions. As for example, the terms "unsound conclusions," "unsound evidences," "unsound reasoning," "unsound opinions," etc., of most frequent use in the law. Insanity is at best but a symptom, a mere manifestation of disease which has been raised to the status of disease itself. When we shall turn our eyes away from these heretofore all-engrossing phenomena and look long and patiently and intelligently for the physical signs of disease, we shall be surprised at the number and importance of these which will become manifest.

A case of so-called delusional mania or paranoia, to-day presents to the observer mainly certain subjective phenomena. In many instances only such. Ten years hence, I am sure these subjective phenomena will be relegated to much lower places as symptoms, and certain objective manifestations will have become so plain that we shall be surprised, perhaps even mortified, at our lack of discernment. Along the pathway of progress it has ever been that the simplest facts and laws of nature passed along unobserved until some discerning mind fixed its attention upon it and looked and looked until it became so plain that thereafter the most ordinary mind could perceive it.

Our point of view has therefore been definitely chosen as dealing not merely with insanity, but with a neurosis, adding to motor, sensory and vaso-motor neuroses, a fourth variety, which we call psycho-neurosis, a form of disease affecting those portions of the brain concerned in the production and regulation of thought and conduct. We have endeavored to clearly recognize in all of our cases not merely varieties of so-called insane ideation or conduct, but (to us more and more evident) fact that these are simply the sick men and women—not sick of disease of the liver or lungs, but of disease of the brain.

We have, in a kind of way, tried to forget such terms as "insanity," "mental derangement," "mental disease," etc., as in a large measure concealing, rather than stating, facts of any great importance. In other words, the fact that the individual placed in our care is *sick*, has taken distinct precedence over the fact that he is the victim of so-called insane ideation or conduct; both the latter being, in our minds, but resultant phenomena, not at all of primary and at best of but secondary importance, either to the understanding or the treatment of the case.

This we do not, of course, claim, as in any sense, a new understanding of the subject. On the contrary, we know it to be as old as Pythagoras, but it has been almost totally ignored. We claim only to have accepted it in its greatest simplicity, and to have carried on our work in the light of this fact and along the lines of the new practical psychology rather than under the domination of the old, and, as we believe, wholly misleading metaphysical theories. A persistent diffusion and inculcation of this idea throughout the institution has done much to change its tone and the character of its work from that of the asylum to that of the hospital.

The bed treatment of nearly all new cases has also served to impress, not only upon the patients themselves, but upon nurses and attendants the fact that we are dealing with sick, and not merely with insane persons. Some

idea of the extent to which we have carried the hospital idea may be gained from the fact that not only in our male hospital cottage, with its one hundred patients, but our male maniacal hospital ward, containing our most violent maniacal, and our most determined suicidal cases, are both in the care of trained women nurses, assisted in both by male orderlies who perform other duties than those of nursing. These innovations, the first made nearly two years ago, the second nearly one year ago—each regarded at the time as an experiment—we now regard as fixtures.

EXAMINATION.

The acquisition of the knowledge of all important facts regarding the case, is our first endeavor. To this end nearly two years ago, with the assistance of Dr. A. L. Warner, chief of the medical staff; Dr. Adolph Meyer, then pathologist of the institution, and the other members of the medical staff, I prepared a blank form to be filled out by the friends and physician, coöperating. This form is modeled somewhat upon the form of blank used by life insurance companies. That is to say, the information desired is asked for in specific terms and not by general requests. This blank, elaborated with much pains, and entitled "A history of the patient prior to admission to the Hospital," is believed to completely cover all facts of importance in this connection, including general description, family history; history of periods of both mental and physical development and of adult life; all facts in relation to the nervous system; to the occupation and life habits of the individual; and all facts pertaining to the development of the present disease, its onset, progress, etc., and also all facts relating to the general physical condition of the individual. These are asked for in such a way that an intelligent answer may easily be given, liittle being left to be answered in a general way. We are thus enabled to begin the study of our case with a full knowledge of his life history.

This is followed by an examination, conceded by all who have examined our forms, to be the most complete ever attempted in this country, and probably the most complete ever attempted anywhere. These examinations are guided by an outline prepared by myself and the gentleman before mentioned, two years ago, and recently elaborated under my direction in a set of printed forms and charts by Dr. W. G. Stearns, and other members of the medical staff. Medical gentlemen interested in this subject will be supplied with copies of either of the above-mentioned blanks upon request.

Charts and blanks for tabulations, amounting in all to about thirty pages, are provided. Of course this has meant a great increase in the work of the medical staff, and it has therefore been increased by the addition of two members and three graduate internes and a photographer.

The history obtained and the examination made, the patient then passes into the medical and surgical care of the institution. As before stated, nearly every new case is given bed-treatment under nursing care for a month, more or less, according to circumstances. We have come to regard this as very important, for several reasons. First, it impresses the patient that he is looked upon as a sick man and that he has not been committed to a prison, but has been sent to a hospital. Secondly, the opportunity to examine and study the case is much better. Third, the patient usually becomes quieter and gains in health and flesh. This treatment is followed by a gradual return to outdoor life, aided if possible by some light occupation, as ball-tossing, mowing or raking lawns, weeding and pruning in flower beds, or if sufficiently strong, working for a few hours each day in the gardens or fields. In winter, these valuabie aids are much restricted, and we are much in need of a Gymnasium or exercise building.

NEW METHODS OF CARE AND TREATMENT.

It is, however, in the care of our most violent maniacal and suicidal cases that we think our most important advance has been made. Our present maniacal Hospital Ward was fitted up, as an experiment, a little less than one year

ago. A ward containing a large sitting-room, twelve bed-rooms, a bath-room and a small dining-room, was taken for the purpose. The rooms were each provided with solid iron beds of our own make, and similar to those in use in the John Hopkins' Hospital, each without a joint or bolt, being welded wherever a union was made; Electric lights were placed over the transoms, so that the rooms could be illuminated from without; the dining-room was converted into a kitchen and provided with a gas-stove, and an ice-box containing everything necessary for the preparation of diets for the sick. The bath-room was fitted up with apparatus for hot air and steam baths, with marble table for shampoo and massage. A theromometer-regulated shower-bath apparatus was also installed. After considerable experimentation, we find that we have fallen into a routine of treatment, which, as it may prove interesting to the medical profession, will be described in some detail.

Four women nurses and three orderlies have charge of never more than eleven cases. It wili be remembered that the cases treated here are either "disturbed cases" or cases of violent, destructive, homicidal or suicidal mania. A "disturbed patient", as such are usually called, no matter if his "disturbance" merely takes on the character of quarrelsomeness or irritabiiity, is never regarded as a case of ugliness of temper, but always as a sick individual. Whatever the condition, the sufferer—for such he truly is—passes first into the hands of the trained masseur and his assistants. He is placed upon the table and a colonic tube introduced and a thorough colonic flushing administered. This accomplishes two purposes—(1) it relieves the intestinal engorment found present in nearly every case of either mania or melancholia, and (2) makes it absolutely impossible for the patient to be "untidy." This effected, if the patient is strong enough, a steam or vapor bath is at once administered, concluding with a shampoo and massage, by which time, having perspired freely, the patient is both weary and thirsty. Having been throughly dried, a pajama suit is put upon him and he is put to bed, and placed in the care of a trained woman nurse who has an orderly constantly within call. While the aboved-mentioned treatment has been in progress, there has been in preparation a bowl of oyster or other soup, or it may be milk-punch, or whatever the physician deems suitable, and this the nurse now brings to the tired and thirsty sufferer when she first takes charge of him. The patient usually goes to sleep as soon as he has partaken of the food, and generally wakes quieter. Whatever be the explanation, we have found the fact to be that this class of patients are much more quiet in the hands of women nurses than of men. It seems almost instinctive for a sick man to submit quietly and gratefully to the care of women. Our experience with these would seem to prove that the influence of woman, being the first to be exerted over and obeyed, is the last to be forgotten by man. It has also been a surprising fact to us that in no single instance has any indignity been offered to a woman nurse by one of these patients. We fully expected that in some instances such a thing might happen and provided against it, but have been happily disappointed. The cases vary in degree of excitability from the merely irritable and quarrelsome epileptic to the violent maniacal excitement incident to general inflamation of the brain; but in all, the treatment has proved feasible. A return to the old isolation treatment would not be favorably considered by anyone familiar with our results.

Great credit for the success in this work is due to Miss Bender the Nurse in charge of this Ward, which she took in hand as a distinct experiment, but to which she now devotes herself as to a success in a new line of nursing, of which she is very proud.

Some months after the introduction of this method of managing our disturbed cases, the Chief Supervisor of the Male Wards said to me "Doctor, did you ever have an idea that this experiment would prove such a success?" In reply, I asked him to state in just what way he thought it had proved successful? "In two ways" was his reply. "First, by giving these cases the treatment they so much need; secondly, by taking all the troublesome cases off the other wards."

I have dwelt at some length upon this topic, hoping that our experience in this way may lead others to adopt it.

This is the place to mention another similar and important improvement made during the past year viz., the conversation of No. 3 South Cottage into a Male Hospital Ward, which also has been placed in charge of a corps of trained women nurses, under the leadership of Miss Mary McGrail. This, one of our oldest and most illy arranged cottages, has been made into a modern Hospital with a capacity of 100 patients. The formerly unfinished basement now contains a large dining-room and, scullery, together with a roomy and convenient kitchen in which the special diets for the male Department are prepared. The walls of the Dining-Room are of pressed brick. The ceilings are of cement plaster laid on steel lath, and the floors of Georgia marble, thus making thorough disinfection possible throughout without injury. Two elevators operated by water pressure, carry food and passengers, A system of fan-ventilation through flues connected with a conduit laid under the basement floor forces hot air into all parts of the building in the cold weather, and by reversed operation draws the air out during warm weather, thus providing constant circulation.

The first floor is devoted to convalescent patients more or less permanently enfeebled and consumptives. The latter have to themselves large, well-lighted, well-warmed, well-ventilated quarters, complete in all details of toilet and bath, and wholly disconnected with other portions. It is a fact perhaps of some significance and worth mentioning here that, since we have adopted isolation of our tubercular cases, the number has dropped in the male department from seven to two in the past two years. The second floor is devoted to bed-patients and is equipped with service and surgical operating and dressing-rooms. Commodius toilet and bath-rooms with marble stalls and floors and furnished with thermometer-regulated shampoo baths, are located on each floor, and the whole interior painted with white enamel paint.

A large enclosed porch on second story affords an opportunity for airing for bed patients when the weather is suitable. Altogether we feel that we have now not only one of the most convienient of Hospital Wards, but one of the sunniest and most cheerful in the country, although not by any means the most elaborate or costly. I can also speak for the work that has been done here by Dr. C. C. Buford and Dr. J. W. Walker as most deserving of praise.

Excepting in the fitting up of a manical Hospital ward on the same plan as that described heretofore, and the placing of both this and the Woman's Hospital Cottage in the care of trained nurses, no changes of importance have been made in the female department.

The work however, done by Dr. C. H. Bradley in the latter and Dr. Emily Wells in the former, has been done along the same lines and belongs to the same class of meritorious service as that heretofore described.

The daily half-hour meetings of the Medical Staff to report to the Superintendent and discuss matters of importance in relation to the Medical Department, have been continued throughout the biennial period with much profit to all. We feel that we have been enabled during the past biennial period to give more study and better study; more care and better care to our cases than ever before. We also feel that inattention, not to speak of impatience and unkindness, has been almost eradicated from the Institution, and that a spirit better and more symyathetic prevails. Those engaged in so-called Insane Hospital work alone know how hard it is to find, among those who will work the long hours for the small wages that Hospital employes receive, persons possessing the humanitarian spirit and unfailing kindness and consideration, which makeso f an Institution that haven of rest for the sick and weary brain which every Hospital of this kind should be; yet, we believe that we have, even in this in the past two years, succeeded better than before. One of our visitors, a Superintendent of an Eastern Hospital, paid us what we deem a high compliment by stating that "While this was the largest Institution he had ever visited, it was also the quietest."

EDUCATIONAL.

It may interest some to know that we are introducing an educational system into the Illinois Eastern Hospital. The objects are three-fold: First, to teach some useful thing; second to break the monotony of Hospital

life; third, to arouse interest in some work or study, thereby improving brain action and circulation. It is even hoped that we may so interest our delusional patients in something that they may, in some instances at least, be induced to gradually forget their delusions We have now in operation several classes in object-lesson teaching, of the character of Kindergarten instruction. These classes are made up of patients whom it has been found impossible to interest in work of any kind on the ward or elsewhere, and under the instruction of a Kindergartner. The amount of interest and pleasure these patients derive from this work is very considerable. We have also a large class in fancy-work. Two classes of men and one of women taking instruction in dancing once a week. We have also a choral class, and I am much pleased to be able to say that Prof. Tomlins of Chicago has become much interested in this and has consented to take charge of it hereafter. We shall have a choral Union of at least one thousand, and one of Prof. Tomlins' graduate pupils will reside in the Hospital and go from ward to ward, and cottage to cottage, practicing and giving instructions in singing. I have long been a believer in the good effect on the brain, not only of music which one listens to, but much more, of the music one makes—the effect of the musical effort, so to speak.

The enthusiastic interest felt in this from the outset by Prof. Tomlins is a great pleasure to me, and inspires me with a great hope.

CARE OF PATIENTS' TEETH.

The difficulty of keeping in an hygienic condition the mouths of the insane, especially in the case of the demented patients, is apparent to all who have had experience in this class of work. Reinforced by a diminished physiological resistance, the retention and decomposition of particles of food in the mouth plays sad havoc with the teeth, and the common sympton of druling of saliva favors this unsanitary state. It is the exception to find the teeth in a healthy condition in the patients newly admitted. Even when there is not an extensive caries, an accumulation of tartar about the roots is usually present. The re-action of these toxic influences on the general health and comfort of these unfortunates is not to be lightly estimated; and removal of all such deteriorating processes is of first importance in attempting to build up the physical forces of those whose mental infirmities we hope to benefit.

The remedy for this has been found in the appointment of a dentist as an adjunct to the medical staff. He will devote his attention entirely to dental work on the wards. The patients are being treated in systematic order. Carious roots and teeth are being extracted; accumulations of tartar removed, and some amalgam fillings inserted. A few violent patients it has been impossible to work with, but only a few. A record is kept on the patient's history sheet of the amount and nature of the work done. This dental work is being followed up by attention on the part of the nurses and attendants to the daily cleansing of the teeth and the improved appearance and freedom from odor is ample testimony to the value of this effort.

In addition to the above, a consulting dentist visits the Hospital weekly, and does the gold filling, bridge and plate work, for such patients as can pay for it.

AGRICULTURE.

We feel that our farm work is deserving of a somewat special mention, inasmuch as we are able to show advances and improvements in several agricultural lines worth the examination and consideration of the farmer. The Hospital farm had, prior to the past two years been managed after the usual methods and made to produce corn, hay, oats, and all the usual and ordinary farm preducts. On consideration of the matter it became quite evident that the problem of utilizing the soil to an advantage was to us a quite differenone to that presented to the average farmer. One of our ever pressing demands was for vegetables and other food stuffs for from 2,500 to 2,600 people. The first great need of the farmer is a market. This we therefore had. If we did not produce vegetables we must purchase them. The garden of the Institution had always been both inadequate and uncertain. Hundreds, and

perhaps thousands of carloads of vegetables had been purchased in the years gone by. We had moreover several hundred men to whom a few hours work each day was a blessing both in respect to physical and mental health. We had also land sufficient for the purpose. The only question therefore that remained was the question of certainty of crop.

www.library.uiuc.edu

IRRIGATION.

The idea of irrigating lands adjacent to the Hospital by connecting pipes to be run into them from the water supply of the Institution gradually took shape and was carried into effect in the spring of 1895; and our great irrigated truck gardens, capable of supplying in greatest abundance all the fresh vegetables that can be consumed by 2,600 persons, became a fact. These gardens have now been in operation two years, and we have never found it necessary to purchase any vegetables except potatoes. We think we may lay claim to more than the mere increased productiveness of our gardens, more than merely a better utilization of our farm to the needs of the Institution; viz.: To the demonstration of a new fact and one important to agriculture viz.: the fact that irrigation in humid countries, whose rainfall is usually sufficient to insure crops, will pay.

I will here quote from a lecture delivered before the Illinois State Horticultural Society on "Supplemental Irrigation" in which the important facts bearing upon this question and the results of our work here are stated.

"The years 1893 and 1894 were marked by an almost utter failure of the garden crops of the Illinois Eastern Hospital for the Insane. As something near ninety acres were planted to garden in each of those years, the loss not only deprived the inmates of the Institution of fresh vegetables to the degree desired, but was a great financial loss to the Institution. Having the year previous remodeled the water system of the Institution, and much increased its capacity, in the spring of 1895 I suggested to the Board of Trustees the extension of our water mains into the garden and into certain lands which it was proposed to use for garden purposes, consisting of about 150 acres. The Board after some deliberation, gave its consent, and we proceeded to lay about 4,000 feet of water mains out into the farm. As there was some delay in completing the work, our irrigation was not begun until sometime in June, 1895. We had in the meantime, however, planted a portion of the land in fruit trees and berries and the remainder was planted in vegetables. As soon as the pipe-laying was completed, the water was turned on and irrigation of the entire tract begun."

The following results show the profitableness of the undertaking:

Beets, 4 acres, 1,960 bushels at 30c	$588 00
Cabbage, 15 acres, 1,498 barrels at $1.00	1,498 00
Cauliflower, 3 acres, 81 barrels of heads at $1.50	121 00
Cucumber, ¾ acre, 184 bushels at 60c	110 00
Lettuce, ¾ acre, 101 barrels at $1.00	101 00
Water and musk melons, 7 acres, 16,000 at 3c	480 00
Onions, 3 acres, 245 barrels at 75c	183 75
Peas, 5 acres, 259 bushels at $1.25	323 75
Radishes, 3 acres, 304 barrels at $2.00	608 00
Tomatoes, 6 acres, 1,360 bushels at 30c	408 00
Turnips, 15 acres, 3,036 bushels at 30c	910 50
Potatoes, 25 acres, 3,000 bushels at 30c	900 00
Greens, 2½ acres, 500 barrels at 25c	125 00
Rhubarb, ½ acre, 261 barrels at 50c	130 50
Ninety and one-half acres	$6,478 40

Or a gross product of seventy-one dollars and fifty-seven cents ($71.57) per acre.

While it is conceded that this does not show an excessively large yield, it must be borne in mind that it is far greater than the average yield in the regions round about during this season, and that, as before stated, the irriga-

tion was begun very late in the season. Moreover, the ground was newly broken and had never before been used for vegetables. We think, therefore, we have demonstrated that irrigation in humid regions will pay.

www.hathitrust.org

The cost of laying the pipe was to the institution about $1,500 or about $10 per acre. The land, before these pipes were laid, would be regarded as high priced, for agricultural purposes, at $100 per acre; it now has a producing value to the institution of $500 per acre. During the years 1893–4, the institution purchased from 40 to 50 car loads of vegetables each year, but during the year 1895, it has not, so far, been necessary to purchase any vegetables whatever. Add to this the pleasure and satisfaction to be derived from having an abundance of fresh vegetable constantly for our tables, and I think we have demonstrated results that are in a high degree satisfactory.

Now let us stop right here and ask ourselves this question—which, among all the legitimate occupations of man, is so much the subject of chance as that of the farmer? He makes his investment in lands, teams, stock, implements, seed, labor, and the skies may be as brass and the earth as a furnace until all his hopes are blasted. It is said, moreover, that "there is scarcely an acre of ground, under cultivation in North America, that would not produce more and better crops if there was, at hand, an abundant water supply. There are seasons, now and then, when the rain comes just right and irrigation might not be needed once, but they are rare. Usually, there are several dry spells during each year that cause serious injury to crops. The seasons of drought and the seasons of too much rain constitute three out of every five, giving the farmer three bad crops to every two good ones." How much more certain and satisfactory would the farmer's life be if he could plant with the assurance that every crop would be an abundant one, not for five years, but for five times five years without a break. This is what may be accomplished by utilizing the surplus waters upon the earth or the hidden stores within it. How often it happens that even if the rains come they do not fall just at the right time. The long drought and heat have stunted the plant or procrastinated its growth until too late for it to develop into a perfect one. In this justly dreaded time, the farmer who can irrigate is master of the situation, for he can apply water just when it is wanted. It will doubtless be a surprise to many of you, as it was to me, when you realize the amount of water necessary to the production of a good crop. In a little book recently published by Professor King, entitled "The Soil," I find the following table with reference to the amount of water which is necessary for the production of dry product:

Dent corn, 309 pounds of water to each pound of dry product.

Flint corn, 233 pounds of water to each pound of dry product.

Red clover, 452 pounds of water to each pound of dry product.

Barley, 392 pounds of water to each pound of dry product.

Oats, 522 pounds of water to each pound of dry product.

Field peas, 477 pounds of water to each pound of dry product.

Potatoes, 422 pounds of water to each pound of dry product.

Rye, 363 pounds of water to each pound of dry product.

With reference to the increased productiveness of soil to which has been applied all the water which it can use, Professor King makes the following statement: "On a moderately fertile soil the writer has grown maize, supplying it with water just as rapidly as it could use it to the best advantage, and found as an average of two trials that it took during the growing season of one-third of the year the equivalent of 34 3-10 inches to produce a yield, when calculated for an acre, of more than four times a field crop grown under the best natural conditions of rainfall in Wisconsin." In other works, that a soil to which is given all the water it can use will produce four times an average product.

Among the most important of our improved methods in agriculture, and one well worth knowing by the farmer, is the practice, which we, on the suggestion of Trustee Orr, have adopted generally, of sowing rye on all corn ground and ground used for vegetables. We get not only an excellent fall

pasture, but the half-grown rye makes an excellent mulch, and fertilizer when plowed in the spring—and we note a marked improvement in the fertility of the soil.

www.libtool.com.cn

DAIRYING.

Another feature of our farm work which we deem of sufficient interest to be described at some length is our dairying. The prevalence of tuberculosis in dairy herds and in the milk of the same, is a fact of so much importance that no dairyman or consumer of milk can afford to close his eyes to it. There is probably not a herd of cows in the State of Illinois not tested by tuberculin which does not contain a notable percentage of cows afflicted with tuberculosis. Our herd, though purchased direct from farms, showed under the tuberculin test twenty-five per cent. of infected cattle. Others in Illinois and Wisconsin showed 50 per cent and above. The rapid spread of the disease among cattle that are stabled and fed together is fact sufficiently important if only from the point of view of the money loss sustained by the dairymen; but when the danger to the lives of human beings drinking the milk of these animals is considered, the matter becomes truly alarming. It is confidently believed that the cow does more to spread tuberculosis among human beings than all other sources of the disease combined. Having rid our herd of tuberculosis by killing off all that reacted to the test, some forty-three, we next undertook tne solution of the following problems: Feeding, stabling, and care of milk.

In relation to the first pasturage as convenient as we could arrange to the barns and affording ready access to the river was provided. The silo then offered itself as the readiest means of supplying food in the barns. Our experience with this food has been eminently satisfactory. Two years ago we built a silo with a capacity of three hundred tons, and last year another of six hundred tons. These furnish succulent and nutritious food for our nearly two hundred cows. To it is added a small amount of a meal made from a mixture of ground corn (with the cob) and oats. The silo, now quite extensively used in Europe, and Wisconsin, New York, Michigan and other states, is insufficiently utilized in Illinois.

In respect to the second problem, that of stabling, we have worked out a method of construction which is not only practical and cleanly, but inexpensive. Removing the floors and other wood-work of our barns, and excavating all loose and saturated soil, we built lengthwise through it 20-inch stone walls on which was laid as feeding troughs and excrement drains 15-inch sewer tile cut in half and cemented together end to end. The space between these walls was then filled in with cinders, and over this laid a floor of wood thoroughly saturated with an antiseptic filler. Over feeding troughs and drains was placed suspended iron tracks on which run conveyors either of manure or food. The drains were united in the middle of the barn with a main drain which connects outside the barn with a large cement-lined stone basin which receives all the urine and washings from the barns. Besides this tank and at the end of the suspended tracks for carrying manure, stands a large tank wagon into which is dumped solid manure as fast as it is cleaned out of the barn. When this wagon is filled with solid manure, soiled bedding, etc., there is then pumped from the tank into it all the fluid it will receive, and the whole is then hauled off to be deposited upon the fields. We have abolished the manure pile. The gain in the productiveness of our soil is evident even in one year, as we return to the soil the nitrogenous substances in which fresh urine and fresh dung are so rich, not waiting until the rains have dissolved these out and washed them into the streams. The character of our food troughs and drains moreover permits of their being thoroughly steamed and cleaned. These barns are provided with connections for cold water, hot water and steam; the latter is freely used for cleansing and disinfecting purposes, and hot water for mixing food in cold weather. We have under the same process of reconstruction another barn, and an open-air feeding shed is being built which will have the same equipment. The cow barns will then be provided with fan-ventilation. When these are completed, feeding on the ground or from exposed racks will end. I am satisfied that these improvements pay,

not only in the economies of food and fertilizer possible through them, but through the improved health of the animals, and the consequent improvement in both quality and quantity of the milk product, to the handling of which our third problem relates.

This we have solved by the erection of a special building 28x40 feet and equipped with steam boiler of sufficient capacity to supply steam to operate the machinery contained in the building and also to supply steam and hot water to all the barns and adjacent buildings. Besides the boiler-room, the building contains a sterilizing room in which all cans and other apparatus are cleaned and sterilized by the aid of boiling water and steam. This room also contains a small steam engine which supplies the necessary power. A third room is equipped with tanks, into one of which the milk is first strained, and then elevated by a pump into another from which it runs into a DeLavale separator running at a speed of 6,000 revolutions per minute through which it passes, not for the purpose of separation, as the two streams of milk and cream are allowed to immediately unite, but for the purpose of aerating and cleaning. This the separator effects in the most marvellous manner, even microscopical dirt remaining in the separator, only the fluid portions of the milk passing out. The stream of reunited milk and cream is allowed to run into pasteurizing vats, each of a capacity of 300 gallons, and equipped with agitating apparatus which is operated by the engine above described, and which keeps not only the milk in the vats but the water surrounding them in constant agitation. The water surrounding the milk vats is gradually raised to a temperature of from 155 to 160 degrees Fahrenheit (between which points the operator, by the aid of steam, hot water and cold water, all of which he has under his immediate control, holds the temperature for 30 minutes after which the agitation being continued, the water about the tanks, and as a consequence the milk is gradually cooled down to the temperature of the cold water supply, after which the milk is drawn off into cans and set into iced water, where it remains until it is taken to the place of consumption. No milk is kept in dining rooms or kitchens, but is received immediately before use directly from the pasteurizing house. Pasteurization destroys ferment germs, and milk thus treated will keep much longer than ordinary milk. Pasteurization also destroys all pathogenic or disease germs, especially germs of tuberculosis which are frequently in milk, and during the 30 minutes of maintenance of high temperature, most of the spores develop and are destroyed. By immediately cooling the milk, spores not destroyed are prevented from developing. Moreover, milk treated in this way is not cooked, that is to say the character of the dissolved albuminoids is not changed, its digestibility is not impaired. Pasteurized milk is also sweeter, and the cream is much less prone to separate therefrom than ordinary milk. One of the greatest gains, however, is cleanliness—no sediment ever being seen in a milk vessel. Our microscopists say they cannot find dirt of any kind in it with their microscopes. It is at least safe from spreading that dread disease of tuberculosis. Ours is probably the first plant of its kind in the world. It was a success in every way from the outset. Our product of pasteurized milk—400 to 600 gallons daily—is probably the largest in this country if not in the world. Here too we think we have broken ground for something new in agriculture.

IMPROVEMENTS AND REPAIRS.

A mere enumeration of these in detail would occupy several pages, and anything like a full account would make this report far too bulky. When it is realized that the institution comprises over seventy buildings, some idea of the magnitude of repairs necessary may be had. Yet this necessity has been cumulative for many years, and the burden of putting the institution in condition fell upon us. Hardly any part of it was found that did not require the attention of the carpenter, the mason, the engineer, the plumber, the plasterer and the painter. It has been fortunate that it has been possible to save enough from the ordinary fund to aid in putting the place to rights. It has also been fortunate that it could be done at a time when employment was very hard to get by mechanics of all kinds. Not only have hundreds of mechanics found employment here in the past two years,

but we have also found occupation for many of our patients in helping along this good work. It will be conceded, even by our enemies, if such we have, that never was so much work of this character done, and never was the institution in such good physical condition as at the present time.

The following tabulary statement, though not full or wholly accurate, will enable you to judge somewhat of the amount and character of the improvement and repair work done by the mechanical departments in the biennial period. Contract work, and work done by patients, of which there has been considerable in all departments, has not been included.

IMPROVEMENT AND REPAIR WORK, JULY 1, 1894, TO JUNE 30, 1896.

Department.	Days' Work.	Wages.	Materials.
Carpenter	5,619	$12,694 00	$13,379 76
Mason	3,957	8,966 90	9,351 55
Plastering	534	1,120 16	1,495 57
Engineering	12,678	15,770 44	16,000 00
Painting	3,507	6,406 50	3,987 46
Tinning	1,066	2,566 82	2,352 68
Electrical		1,704 84	2,170 67

This being the first attempt ever made to ascertain the actual cost of all repairs and improvements in this, or as far as known, any other institution, it is not claimed to be accurate, but only an approximation. As calculated by the head book-keeper, taking account of wages paid and bills for materials, the cost is $95,738.83. As calculated by the book-keeper of the mechanical department, the cost is $109,937.46. The difference is due no doubt to the fact that the mechanical department took account of much time spent in repair work by employés not thus taken account of by the head book-keeper.

Briefly mentioning a few of the more important repairs and improvements, I would call attention to the ice-making cold storage plant, erected and equipped at a cost of about $15,000. The erection of this was forced upon us by the utter failure of the ice crop in the winter of 1895–6. After careful deliberation it was decided that it would be in the end more economical to erect such a plant than to purchase the large amount of ice which would be necessary to carry us through. Proposals were received from thirteen companies manufacturing refrigerating machinery, and that of the Fred Wolf Company, ot Chicago, for two fifteen-ton Linde machines, operated from our line shaft, was accepted. This proposal included also the piping necessary for the refrigeration of about 80,000 cubic feet of space, and an equipment for ice-making with a capacity of about six tons per day. An extension of the storehouse building, 35x75 feet, three stories and basement, was erected to provide rooms for refrigeration and ice-making. Though the period of trial has not yet passed, the plant has so far given satisfaction both in reference to ice-making and refrigeration. Much time was spent investigating both the construction and operation of refrigerating plants, and it is believed that we have now one of the most complete in this country. The capacity of our meat rooms are one carload or more, and we now have storage for eggs, fruit, vegetables, etc., sufficient for all the needs of this great institution for many years to come. Our ice being made from condensed steam is absolutely pure. We regard such a plant as indispensable both from the points of view of convenience and economy. Second in importance at least is our Pasteurizing house, heretofore described. The remodeling of our horse and cow barns in the interests of better sanitation in respect to our dairy, we regard also as a very important step. An extension one hundred feet in length was also made to our green-house and conservatory, heretofore a meager affair. The general remodeling of No. 3 South cottage into a hospital ward for female patients, heretofore described, makes possible hospital treatment to a degree never attained before. An officer's dining-room added to the administration building increases somewhat the capacity of that much too-small building. The gas-works were also completely remodelled at a cost of $1,500 during the past year, increasing their capacity and efficiency,

and reducing the cost of gas. The pump-house was overhauled both by the carpenters and painters and put into neat condition, and a centrifugal pump installed to clean the 1,500 foot tunnel now used as a conduit and settling basin of mud, which it does effectually.

A mortuary was fitted up and equipped with inspecting, operating and cooling rooms in one of the basements, thus permitting the use of the former morgue as an addition to the reading-room and library, which it adjoined, an extension badly needed. Some fifty thousand additional feet of cement walks of a superior character has been laid. The engine-room of the central power plant was completely remodeled, a line shaft 90 feet in length, with pulleys, being installed, to either end of which is attached a 200 horse-power engine. This line shaft operates not only the laundry and shops, but electric generators and ice machines. Either engine may be used to operate it when the load is light—both when it is heavy. All belts, pulleys, etc., are so protected with wire guards as to minimize danger. A large exhaust fan was also installed in the power room, which ventilates not only this but the bakery, kitchens and the corridors of the administration buildings and of both the north and south wings, 1,200 feet in length. The chimney of the central heating and power plant was extended 70 feet in height, effecting the almost incredible saving in our fuel bill of 500 per cent. per annum on the cost of the extension, mainly, however, by our being able thereafter to use cheaper grades of coal. The laundry has been completely remodeled; new floors laid on concrete in the places of the old and rotting ones, which were laid on earth. Gas iron-heaters have been substituted for the old coal stoves; exhaust fan ventilation instituted in both washing and ironing rooms, much improving the health of employés in this department; and much machinery installed, vastly increasing its capacity. Three large filters, each with a capacity of 40,000 gallons per day are also being installed. We are now able to turn out easily the great amount of 30,000 to 40,000 pieces per week of laundried clothing and bedding, necessitated by the large number of patients and employés, many of the latter requiring numerous changes each day. Dining-rooms have been fitted up in the basements of Nos. 3 and 4 south cottages, and another is undergoing the same process under the B wards south. This will increase the capacity of the institution fully 200 without the construction of any new buildings, the rooms formerly used for dining rooms being used for dormitories.

When the administration building was erected, a clock tower was provided, but for twenty years it has remained unfilled by a clock. By the time this is in print, a Howard clock, with illuminated dials and a 2,000-pound bell, striking the hours, will be installed; the same having been contracted for at a cost of about $1,500. The sewerage has been improved by the construction of new and the deepening of old sewers, and much of the old and worn-out plumbing replaced by that which is new and modern. The efficiency of the carpenter shop has been increased by the construction of a steam drying-kiln, and the installation of much machinery of the newest and most approved types. Roofs have been quite generally repaired. A system of Yale electric locks has been installed in the woman's infirmary, by which all the doors may now be unlocked and thrown open in less than half a minute in case of fire. New and commodious quarters for the drug department have been fitted up in the basement of the administration building, thus freeing the room formerly occupied by the pharmacy, which has been fitted up as an examining and photographing room. New quarters for the paint shop and the electric department have been fitted up, so that the rooms occupied by the former might be converted into a patients' dining-room, and the latter into service rooms for the officers' kitchens.

Looking to the future, a large number of fruit trees and several thousand grape, blackberry, raspberry and strawberries have been planted, all within the reach of our irrigation plant. A park, a mile in length, and bordering the river, is being constructed mainly by the labor of patients and their attendants, almost the only cost being for the mason and carpenter work of eight bridges across ravines. The grading, leveling, tree-planting and trimming having all been done by the patients. This park is designed for the exclusive use of the patients in taking long walks. A spring discovered in the river's bank is

being neatly walled up, and rustic resting houses will be constructed. Hundreds of other improvements, large and small, all looking to the present and future comfort and welfare of the patients have been effected, but the foregoing is sufficient to show at least the character and trend of our work in this direction.

A LOOK TO THE FUTURE.

I am by no means one of those who believes that the last word has been said on the subject of the care and cure of the so-called insane. On the contrary, I believe that we are only just spelling out the words of a new chapter —opening up new and more hopeful fields already made ripe to the harvest by the histologist, the physiologist and the experimental psychologist. The new psychology now rapidly developing under the hands of hundreds of practical workers in the Universities of this country and Europe, ought to have been pre-empted to the domain of medicine, for it is in fact but a new department of physiology. But though a physician, Wundt, began the studies that have since developed such interesting and valuable additions to our knowledge of the operations of the senses and intellectual activities it was left to the scholastic world to advance it to its present interesting status. To this, and to the study of insanity (so-called) as a neurosis I look for the progress of the future.

The problem before us is two-fold in character:

First. The care and treatment of the various forms of brain disease marked by insane ideation and conduct in their acute stages.

Second. The after care and re-education and reformation of brain paths damaged by the effects of the disease.

To the solution of the first problem we must bring to our aid the same methods and equipment as obtain in the best general hospitals. We must clearly recognize that we are dealing with disease—disease of an organ which must be treated much on the same line as diseases of other organs. Rest, elimination, nutrition, are the great factors in this undertaking. These must be secured through nursing, baths, feeding, exercise, diversion surgical operations when necessary, medication, etc. In other words, so far as the care and treatment of the acute insane is concerned, the hospital with its modern methods and equipment must take the place of the asylum. A lady visitor eminent in good works of philanthropy and charity after visiting the Institution recently, asked me if I had to choose between all the various needs of the Institution and could have but one, what I would ask in addition to our present equipment. My reply was, fifty more trained nurses; and I did not mean nurses such as are trained in Institutions of the character of our own, but nurses with the training of the best general hospitals, and especially and deeply imbued with the nursing spirit which I regard as one of the best additions to modern civilization. This would mean a decided increase in the cost of attendance, though this could be reduced somewhat by employing a cheaper help for the manual labor of the ward. A higher class of better trained, better paid nurses and attendants and the infusion of the hospital idea, is therefore one of our greatest needs. This however, can never be obtained so long as the partisan system prevails, making positions in institutions of this class merely election spoils. An officer or employé who holds his position through political influence will never give as good service as under conditions when fitness and the quality of the service alone determines his selection and retention. Interest, training and kindliness are the most difficult qualities to find among those who can and will do the work required of them for the small pay received, and only appreciation and assurance of permanence will keep those possessing the requisite fitness and training. Another great need is for a better trained, better paid medical service. From time immemorial it has been the custom to select for training as assistants young men just graduated from medical colleges. Falling into a special line of work before they have had the trying but valuable experience of the practicioner in medicine, both they and the institution are cheated—they of the practical training which comes from contact with disease in general, and the institution of the benefit

of practical experience. It has been my effort to remedy this in part by selecting young men who have served as internes in good general hospitals. The physician no less than the nurse needs the actual contact with disease in general before he is ready to meet, recognize and treat as diseases, the neuroses that have so long been concealed under such vague and unmeaning terms as insanity, melancholia,mania, etc.

With regard to the second problem, viz: the care and reclamation of those who have passed through the acute stages of disease without recovery, the first great need is good custodial care. Disease having robbed these sufferers in whole or in part of the power or desire to take care of themselves, willing, kind and humane care should be provided. In this again, the idea of disease should be kept to the front. The custodian should be taught to look upon his charge not as a weak-minded or idiotic or perverse individual, but as one who is suffering from the after-effects of disease. Educational methods, now coming somewhat into vogue, promise something in the direction of re-educating damaged brains and diverting attention from delusions or fixed ideas. We therefore need, not only a building suitable for educational purposes in the broadest sense, including physical as well as intellectual training, but a corps of teachers capable both of instructing and directing. Indeed, what more diverting thing is there than some interest well aroused. We therefore need a gymnasium or school building and ask an appropriation for that purpose of $25,000.

Nutrition is the greatest factor in all cures. If the nutritive functions fail, disease immediately steps in and death ensues. Food of good quality and well prepared is therefore a prime necessity in an institution of this character. We have solved the problem of fresh vegetable food, and also the milk problem. So far as these are concerned, we believe extension along present lines is alone necessary. I would recommend the purchase of additional lands adjoining the present hospital farm to the extent of about 200 acres for these and another purpose about to be mentioned. Next to milk and vegetables, fruits in abundance are an important need of an institution such as this. What we have done in the way of assuring vegetables may be done in reference to fruits by the planting of orchards and the extension of water mains. Orchards, graperies and berry-fields sufficient in extent to supply the wants of this institution, and which can be largely taken care of by the patients themselves, are possibilities of the near future. Irrigation will make a certainty of these crops. Of all the foods, the two most important are *water* and *air*. Water this institution has in greatest abundance, but being the water of the Kankakee river, and several towns above this point discharging their sewerage into it, its quality is far from satisfatory. Typhoid fever prevailing in one of the towns above us the past summer, it soon broke out in the Institntion, and some thirty to forty cases, with two deaths, resulted. A pressing and very important need is therefore a water-purifying basin and reservoir. Better means of ventilation, viz., by exhaust fans, is also needed. The ordinary means of ventilation, viz., by flues, is entirely inefficient when any considerable number of persons are confined in the same building. One or more exhaust fans operated by electricity are needed in each building, and this will necessitate an enlargement of our electrical plant. The efficiency and economy of the central power and heating plant may still further be increased by improvements made possible by better machinery and methods. Only a portion of the amount asked to repair and improve the plumbing was granted. There remains yet in the institution much plumbing that is old, defective and expensive on account of the amount of water required by the hopper system which necessitates the constant running of water.

A home for women nurses is a pressing need. At present we are obliged either to have them room on the wards or cottages with their charges or scatter them about in various places. The former is bad, as when not on duty not only their bodily but their mental health requires absence from the environment of disease; the latter is undesirable, as many of them being young they are better for the regular habits and restraining and corrective influences which such a home presided over by a competen matron secures.

A very important element in successful administration is the "good manners" taught, the *esprit de corps* maintained by methods such as I have indicated.

www.libtool.com.cn

A considerable number of surgical cases is constantly found among so many patients. These cases require a different handling from the medical cases, and their mingling is always undesirable. If a suitable two-story building were erected, all these cases, male and female, could be grouped together and given surgical care. One operating room and one surgical equipment would also be sufficient.

REPORT OF TRUSTEES.

HON. JOHN R. TANNER, *Governor of Illinois.*

SIR:—The trustees of the Illinois Eastern Hospital for the Insane, in accordance with the provisions of the law, herewith submit their report of the transactions of the institution under their charge for the biennial period ending June 30, 1898, which report also includes the statements of the superintendent and of the treasurer, with the itemized accounts, showing in detail the receipts, disbursements and financial operations of the institution during the same period.

The present board of trustees assumed charge in March, 1897, and on the 27th of the same month appointed Dr. William G. Stearns as superintendent to supersede Dr. Clarke Gapen. It will be observed that of the eight quarter-annual periods included in this report the first three were during the former administration and the last five during the present administration.

It was represented to the present board of trustees in the report compiled under the direction of the late superintendent and submitted to them that there was then a surplus of $8,636.66. Subsequent to this report many bills were presented to the institution for supplies which had been bought and consumed from one month to a year previous, and which were not paid for, and which were properly chargeable to preceding quarters. An extended investigation as to the liability of the institution for these bills was entered upon and those which were found to be correct were allowed, aggregating $22,839.25. The investigation of this matter was rendered very difficult by reason of the fact that, owing to the system of bookkeeping then in vogue, there was no record kept of the outstanding indebtedness of the institution excepting the bills sent by the creditor, and so long as there were conniving employés in the department to hold back bills, the investigation was hampered.

However, the result of the investigation showed at the end of the March quarter, 1897, a deficit then existing of $12,285.64 instead of the reported surplus. This deficit has been decreased since that until at the end of the last biennial period it was $5,775.22 and the management hopes by the end of this year to have the institution out of debt.

The difficulties attendant upon decreasing this deficit have been very great, by reason of the fact that the prices of the necessities and staple articles which the institution is obliged to buy have ruled greatly higher during the biennial period just past than during the two preceding biennial periods, while the ordinary appropriation has remained the same. The operations at the hospital have also been somewhat hampered by the fact that, on account of an error made by the engrossing clerk of the last General Assembly, some $18,000, which had been allowed by both branches of the Legislature and approved by the Governor, was lost to the institution, so that the special funds really appropriated were greatly decreased. These were for absolute necessities of the institution and had to be taken out of the general fund.

www.library.com.cn

One of the pressing needs of the institution at the time the present board of trustees assumed the management was a complete and modern system of book-keeping and accounting. The system in vogue was antiquated and useless, and there was no proper check upon any of the transactions of the hospital. Illustrating this grave defect is the fact that in three months next preceding the taking charge by the present administration one clerk had succeeded in embezzling $250 without being detected, as there was no check whatever upon him. The indictment of this clerk was caused by the present board of trustees and he left in the night and is now in unknown parts. The amount of his defalcation, however, was subsequently made good by his relatives.

A complete and accurate system of book-keeping, and particularly of checking the issuing of supplies, was put in force and has resulted in a very great saving in the matter of supplies.

Some idea of the magnitude of the institution may be gathered from the summary of the inventory which was taken under the direction of the present management by appraisers appointed for that purpose at the beginning of the present administration. There are about 800 acres of land, upon which are situated more than seventy buildings devoted to the care of the approximately 2,200 patients and the housing of the considerable number of persons employed in their care. The real estate is valued at $105,000, the buildings $1,086,685 and the other property at $176,905.13; making a total of $1,368,590.13. This inventory, which is detailed and voluminous, and the first one taken for many years, has been bound and is now on file at the institution.

For several years there has been pending litigation between the city of Kankakee and the institution, relative to the sewer which carried the drainage and sewage of the institution and emptied the same into the Kankakee river at a considerable distance below the city. This sewer was built at a time when the institution had not attained its present considerable size and was then ample for the duties imposed upon it. Of late years it has come, by the greatly increased demands upon it, to be entirely inadequate to perform its required work, and in times of freshets was permitted through a trap to overflow into the river above the city, greatly to the detriment of all par-

ties concerned. There was also a claim presented by the city of Kankakee to the last Legislature asking an appropriation of $15,000 to build a new sewer adequate to the present needs. It was found upon investigation that the present system was sufficient to carry the surface drainage. The present management has therefore begun, and has nearly completed, a system of sewage disposal which it is believed will remedy the difficulty stated and will also save to the institution the immensely valuable fertilizer which has heretofore been emptied into the river. The sewage pipes have been disconnected from the drainage and run into a large vat, from whence the sewage is to be forced by compressed air through a sewage disposal system and emptied upon the farm and garden lands. The system is to be operated by compressed air, and the power is furnished from the pumping station without additional cost. This improvement has been made inside of the appropriation which has heretofore been used for repairs to the present system, and it is believed will produce most satisfactory results in fertilizing an almost exhausted garden and removing possible grounds of litigation.

The engineering department was found by the present management to be in a deplorable condition, and a very large amount of work has been necessarily done in that department, every boiler in the institution being condemned. It was found among other things that many of the heating plants in the various buildings were defective and obsolete, and that it was necessary immediately to replace them. Some of them generated more smoke than heat, and many of them were an immediate menace to the safety of the institution by reason of their defective condition and the consequent danger of burning the buildings. It was also found upon investigation that an immense quantity of coal was consumed in the separate buildings, and a large amount of labor was required to keep up the heating of the autonomous plants. It was therefore decided to effect the heating of all these buildings from the central plant, thus saving the immense amount of fuel and labor required to keep up the separate fires. Steam pipes have been run in suitable tunnels to and through the various streets in the institution and the heating will be furnished from the central plant. The cost of new heating plants required in the several cottages has by this means been saved, and it is believed that a very great saving of coal and labor will be thereby effected. Much yet remains to be done in this department.

It will be necessary during the coming biennial period to make a number of repairs and improvements, a list of which is herewith submitted, as well as a statement of the items and amounts of the different appropriations which are deemed necessary by the board of trustees and have been submitted to the state board of charities for their approval.

The report of the superintendent, which is herewith submitted and which shows the institutional work of the biennial period just past, is hereby approved by the board of trustees.

Appropriations asked for the Illinois Eastern Hospital for the Insane for the biennial period ending June 30, 1891.

The following are urgent:

www.libtool.com.cn

For ordinary expenses, per annum	$308,000 00
For general improvements and repairs, per annum	25,000 00
For furnace and boilers	10,000 00
For power plant	20,000 00
For electric wiring	15,000 00
For fire escapes and fire department	3,000 00
For chapel, gymnasium and amusement building	23,000 00
For drainage, sewerage and sewage disposal, per annum	2,000 00
For furniture, per annum	5,000 00
For improving and repairing plumbing system, per annum	3,000 00
For repairs to slate roof, per annum	3,000 00

The following are necessary, essential to the economical administration of the institution:

For live stock and farm implements, per annum	$3,000 00
For equipment and maintenance of pathological laboratory and scientific work per annum	5,000 00
For library and reading room, per annum	1,000 00
For painting, per annum	10,000 00
For tools and equipment for patients' work shop	1,500 00
For remodeling two cottages	2,300 00

The following are very desirable and economical:

For garden propagation building	$2,300 00
For cement walks	6,500 00
For improvement of grounds	2,000 00
For telephone system	2,000 00
For lawn irrigation plant	900 00
For improvement of garden	4,000 00
For improvement on farm	1,000 00
For additional farm lands	25,000 00
For dairy house and butter factory	1,800 00
For canning house and equipment	4,000 00
For poultry house and equipment	2,000 00

HOSPITAL, *Illinois*, August 31, 1898.

www.libtool.com.cn

SUPERINTENDENT'S REPORT.

To the Trustees:

GENTLEMEN:—Upon assuming charge of the Illinois Eastern Hospital for the Insane as superintendent and financial agent of your board, I was pleased to learn from the balance sheet for the quarter ending March 31, 1897, which was prepared four days after I became superintendent, that there was a surplus of $8,636.66 in the institutional treasury. A few days later the monthly statements of our creditor firms showed to me surprisingly large balances due for goods already consumed, of which no record could be found except that given by our receipts for freight paid and the storekeeper's record of "goods received." The book entitled "Bills Payable", which was kept in the superintendent's office, had failed to give any of these items, as well as many of the bills that had already been audited and paid.

I at once requested copies of the original invoices, and began a careful investigation of each bill. At the close of the first three months, I had true bills for supplies actually contracted for and used by the former administration, then remaining unrecorded and unpaid, which amounted to $20,922.30. These bills were examined by your board and by them ordered paid, thus making the purported surplus a deficit of $12,285.66. Since this period, bills contracted by the previous administration have been paid upon your order to the amount of $1,916.95, making an actual, but unreported debt upon this institution inherited from the former administration of $22,839.25.

ACCOUNTS.

Recognizing that a sound financial basis was the first essential to the successful administration of the affairs of this institution, I turned my attention to the business records and methods.

It was found that the storekeeper, through whose hands supplies, etc., to the amount of $230,000 passed annually, had no adequate record of the receiving and issuing of goods. A system of bookkeeping has been inaugurated for the storehouse, entirely independent of the institutional records kept in the clerical office, which provides for an accurate record of the receiving and issuing of supplies—a record that is a guide for future issuing and a check upon the possible and gradual growth of expenses so very liable to occur when no

provision has been made for comparing one year's expenses with another, item by item, and the expenses of one department with that of a similar department.

www.ldbook.com.cn

While there is charged up to counties and private patients about $35,000 annually for clothing, etc., there had been no systematic effort made in the collection of same, and there remained bills amounting to nearly $20,000 that were practically "dead" accounts. A system of collection has been inaugurated which will insure prompt adjustment of such accounts.

Formerly the head of each department made requisition for supplies *ad libitum* and was called to account for same by means of a so-called inventory taken annually by himself. The department kept no record of supplies received and used. I now require each of the ninety-five departments of the institution to keep a stockbook showing all supplies received and the disposition of same. A duplicate stockbook is also kept in the clerical office for each department. All supplies from the storehouse are issued on requisition, a copy of which goes to the chief clerk. The head of each department sends periodically reports of the disposition of supplies issued to him to the chief clerk. The clerical office in this way obtains data for the keeping of the duplicate stockbook, with which the quarterly inventory of each department is compared by the auditing clerk. An accurate record is thus kept of the supplies of the institution and the cost for maintenance for each of the departments—a knowledge of which is necessary to the economical administration of the institution.

The ten mechanical departments of the institution, doing repair and new work to the amount of $75,000 annually, kept no record of what they were doing or where they were doing it. A separate account is now kept of the work done by each mechanical department with each building and department of the institution, both for repair and new work. I submit herewith a report of such work for the year ending June 30, 1898, which shows that the repair work for this year amounts to $51,853.90, the new work to $23,858.38. This information I consider essential to the proper and economical superintendence of the physical condition of the institution.

PATIENTS' ACCOUNTS.

The former administration instituted a charge of one dollar per month for incidental expenses for each patient. This charge gave to the institution an annual income of $26,400. For the authority to make this charge for incidentals, section 15 of the lunacy law was quoted, which reads, "The cost of clothing, transportation and other incidental expenses, not constituting any part of the maintenance or treatment, shall be defrayed at their own expense, or that of the county from which they were admitted." There are legitimate "incidental expenses" connected with the care of patients, but bills for such "incidental expenses" had never been rendered prior to 1893. The amount thus collected, $26,400 annually, was practically a clear gain, and enabled the management to make many altera-

tions and improvements, some of which have proven to be useful and economical. I believe the charge to have been an unjust one, because the bills were not itemized; the fixed amount was charged, regardless of what the patient actually received. This practice, upon my recommendation, your honorable board ordered to be discontinued, and an itemized bill to be rendered for each item of expense. While the doing away of this charge has greatly decreased the income of the institution, we feel the satisfaction of knowing that we are dealing justly with our patients and their friends.

REPAIRS AND IMPROVEMENTS.

To all outward appearance, to the casual observer, this institution was in excellent repair, but in reality the most vital parts of the hospital were in a most dilapidated condition, and it was absolutely essential to the economical and best administration to make an outlay of $75,712.28 in new and repair work during the year ending June 30, 1898, as shown by the detailed report herewith submitted.

MECHANICAL DEPARTMENTS.

Statement of the Cost of Labor and Materials used in Repair and New Work for year ending June 30, 1898.

	Repair work.	New work.	Total cost of repair and new work.	Cost of material	Cost of labor.	Total cost of labor and material.
Engineer's department	$9,200 73	$15,367 25	$24,567 98	$15,744 79	$8,823 19	$24,567 98

Miscellaneous	355 91	.....	355 91	267 63	88 28	355 91
Totals	$51,853 90	$23,858 38	$75,712 28	$45,528 06	$30,184 22	$75,712 28

By far the greater part of this outlay was placed in the heating, power and electric and water-works plants, and in the plumbing and the disposal of sewage. The engineering department was found to be in a very bad condition. The greater part of the plant was of poor design, the entire plant was badly in need of repair, and great expense was daily being incurred on every hand by waste of every description. Some of these losses have already been completely or partially corrected, and work is being done toward further economies.

HEATING.

Undoubtedly the most wasteful of all departments was that of heating. The heating system for the various buildings embraced many varieties of heating plants in common use, and several that are

obsolete. The central building and wings are heated from the central boiler plant by live steam. The entire piping job is of an old and not very efficient design, but the principal fault is with the return mains in the basements. These returns are of all sizes and run by tortuous ways, so that they are at all times choked with water holding the steam back. The radiation is probably adequate, providing circulation is secured, and a thorough remodeling of the piping in the basement is the only means of attaining that result. There are also many indirect radiators in the basements, with fans and engines attached. The object of these was to furnish hot air by way of flues and registers to the wards, but as the radiators are always full of cold water, on account of the poor return system, they are of little value. The engines are never operated. The air to be furnished was in every case drawn from damp dark cellar passages. The other ward buildings, with two exceptions, were heated each by its own plant. All but three or four of these are highly unsatisfactory; those which were heated by hot air were the warmest, but in these the rooms contain more or less smoke and gases throughout the winter. The hot water heated buildings were nearly all cold, some of them so bad that the average temperature of the rooms ranged from 56 to 60 degrees in coldest weather.

We have now nearly completed the installation of a steam-heating plant which will heat the entire institution, excepting the farm buildings and the superintendent's residence. The steam is conducted through large, well insulated pipes under low pressure (from two to six pounds). A large portion of the steam used is the exhaust from out power plant, which formerly escaped without being fully utilized. By means of a central vacuum system all of the radiators are kept free from air, and the use of steam at low pressure is made practicable. Instead of hauling coal to each building and keeping several firemen attending seventy fires formerly in use, we will have fires only in central boilers, and a large proportion of the heating will be effected by steam that was formerly wasted, thus securing the most efficient service and economical results.

There has also been put in, at the same time as the heating pipes and at a very slight additional expense, a system of returns from the hot water supply. By connecting these with a small pump, which has not been in use, the water is drawn hot at the places distant from the boiler-house as readily as from those adjacent to it. An additional hot water heater has also been constructed from a tank already on the grounds, and an abundant supply of water obtained. By connecting the hot water mains going to the bath-house, an adequate supply of water is obtained there, releasing an exceedingly wasteful pump from the service of pumping water from the mains in the bath house. This pump is now installed as reserve boiler-feeding pump.

POWER PLANT.

The main boiler plant was also in bad condition. All of the boilers were fast being condemned. The piping was a network of leak-

ing joints and shreds of old pipe-covering; there was hardly a valve in the system that did not leak, and the whole system was so complicated that it was unmanageable. A new 250 high pressure water-tube boiler was at once installed. The entire piping of the boiler room has been taken down and replaced, without interfering with the service of the plant. The unnecessary pipes have been cut out, and all of the valves were repaired or replaced. A complete system of pipe-covering of the best quality has been put on, and steam is furnished to the engines and for heating with the minimum waste and condensation.

www.libtool.com.cn

The engines are now run at a higher pressure from the new water-tube boiler with greater efficiency; and a few of the old boilers have been repaired and are used for heating and as a reserve. Another water-tube boiler will be needed next season.

The power plant has two old Corliss engines. Neither of them is particularly efficient, and one of them is in very bad condition, and can not be depended on in the least. The amount of shafting in the power-house, shops and laundry is enormous and most expensive to operate. A complete renovating and renewing of the entire power plant is essential to the economical and most efficient management of the institution.

LIGHTING.

The electrical plant has four dynamos for the incandescent lamps and one for the arcs. The arc dynamo is old and badly worn. It is a constant source of trouble, and is unreliable. The low voltage machines are in good condition, but are operated by a system of belts and clutches that necessitates constant repairs and is unsatisfactory. The electric wiring for the entire plant is unutterably bad. There is not a building which is not in constant danger from electric fires. The cables are largely of a construction that has been abandoned for years, and the house wiring is in conformity with it.

A considerable part of the arc-lighting current is carried by a line in the trees, because the underground cables are so badly grounded that they are useless.

WATER SUPPLY.

The water for the hospital is supplied through direct acting steam pumps, which are acknowledged to be one of the most wasteful machines using steam, but these are at the further disadvantage of having boilers which furnish steam at 60 pounds to pumps designed to run with from 110 to 160 pounds pressure.

PLUMBING.

The amount of water used in the hospital is enormous. This is due to faulty plumbing. The entire system of closets on the north side is constructed so as to demand continuous streams of water, wasting thousands of gallons of water every day. The daily water consumption was, at the time you assumed control, 2,500,000 gallons,

whereas the consumption should be but 300,000 gallons for an institution of this population. A daily waste of 135,000 gallons has already been corrected.

www.libtool.com.cn

SEWAGE DISPOSAL.

Because of the enormous use of water, the sewer is at times inadequate, when a large amount of sewerage must be turned into the river above the dam and close to the source of the institutional and city water supply. To prevent this pollution of our water supply and obviate the necessity of constructing a larger sewer at an enormous expense, a plant has been constructed for forcing the sewage upon a large tract of farm land that will now be used for raising the coarser varieties of vegetables. Our sewage will then be used both as a fertilizer and for irrigation purposes. It will no longer contaminate the Kankakee river.

FINANCIAL MANAGEMENT.

Notwithstanding the giving up of $26,400 annually collected by the former administration for incidental expenses, and doing repair and new work to the amount of $75,712.28, and buying much of our coal at twice the usual price, on account of the strike, making our annual coal bill $40,482.86, together with the sharp and steady advance of all supplies. the institution has been maintained at as high or higher grade than ever before. and the deficit has been reduced to $5,775.22. This has been effected only by a most rigorous supervision of each of the departments of the institution with reference to its economical management.

THE MEDICAL DEPARTMENT.

In the direction of the professional work of the institution my aim has been threefold: the care of the chronic incurable patients (asylum treatment), the cure of acutely ill patients (hospital treatment), and the scientific study of insanity. To facilitate the work in each and all of these three lines, a proper classification of the patients in the several wards is of the greatest importance. This has been obtained, or rather more successfully completed, by extended individual study of cases. While for many practical reasons there can not well be a distinct line of demarcation between curable and incurable patients as regards their distribution in the wards, it has been closely approximated. and the favorable results thereof have been clearly demonstrated, both as regards the more effective treatment of the acute cases and the more efficient management of the chronic cases.

CARE OF THE CHRONIC INSANE.

In the care of the chronic insane, aside from the housing and diet, the most important problem is that of furnishing a sufficient amount of suitable employment. I have in every possible way endeavored to increase our facilities for furnishing occupation to our patients. Among my first efforts was the increasing of the acreage of small

fruits in our garden; later in nearly doubling the acreage of our garden, the fertilization of which was rendered practicable by a system of sewage irrigation just completed. A tract of one hundred and fifty acres of farm land has been leveled, graded and drained, so as to permit of surface irrigation, and a plant for the pumping of sewage by compressed air is now in operation; making three hundred acres of irrigated garden and fruit land that will be under cultivation next season. For further fertilization of this immense garden, I have made arrangements to clean the stock cars of the Illinois Central railroad system. This furnishes quite a large number of patients with employment, and enables us to secure a fair amount of fertilizers for our garden.

As a result of this policy, in order to store the increase of last fall's product, it was necessary to build a root-cellar at the expense of $500. Aside from the vegetables stored in root-cellars, many vegetables were buried in the garden, and enough green corn and tomatoes were canned to last throughout the winter season. This present year it is intended that a much larger amount of vegetables will be preserved and canned, and I am sure that, with an addition to our canning and preserving facilities, it will not be difficult to raise and preserve a sufficient amount of vegetables to maintain our family of 2,700 people the year round, and at the same time provide healthful and suitable employment to a large number of able-bodied patients.

For this garden we greatly need a suitable greenhouse or propagation house for the starting of vegetable plants, for which we will ask of the next Legislature an appropriation of $2,300.

Aside from the general garden, small beds are prepared, and one is allotted to each paroled woman patient, who is expected to till and care for same. The vegetables and flowers raised in this manner are to be disposed of upon the grounds as the patients raising them may desire.

Much employment has been given our patients, during the past year, in digging the tunnels in which to run the pipes of our new heating system, in the laying of the sewage disposal pipe-line, in the construction of walks and drives, and in tearing out seventy brick furnaces, which have been abandoned.

The acreage of our lawn has peen increased, and a still greater extension is now in progress. In the caring for our ninety acres of lawn, of which over fifty acres are irrigated by sprinkling and mowed by hand, the care and sprinkling of four miles of streets and three miles of walks, the planting-out and caring for three thousand five hundred bedding plants, thirty-five lawn vases, and the greenhouse for growing plants, most pleasant and suitable employment is furnished for the acute patients who have been used to performing manual labor.

By the placing of epileptics on wards together, and by paying careful attention to their diet, exercise, and habits of life, the number of epileptic seizures has been reduced sixty-six per cent during the last year, and the general character has been markedly benefited.

TREATMENT OF ACUTELY ILL PATIENTS.

In the care of the acutely insane, there has been a slight extension of "bed treatment" of patients, and we hope to increase our facilities still further for the better nursing for those of our patients of whose recovery we have hope. Our acute maniacal men patients who receive rest treatment, as well as those of diseased body, are placed under trained women nurses, who are able to secure much better results than are men nurses. Our women nurses have time and again demonstrated their superiority over the men nurses in tactfully controlling and diverting the attention of the excited and maniacal men patients.

For the women's hospital wards, one of the first cottages built is used. It is most inconveniently arranged for that purpose; the walls being comparatively low, and the ventilation wholly inadequate. It is desired to slightly remodel one of the newer cottages, converting it into hospital wards, and by a few changes in the cottage now used for the infirmary to make of it a ward for old and feeble women.

The basis for the treatment of our patients is formed by a careful, individual study of the family and personal history of each, and a thorough examination on admission followed by close observation. A special effort is made in every case to complete the family history by correspondence and private interviews with the friends of the patients. The examination upon admission is not only made by the ward physician, but by specialists, who examine the patient more exhaustively along their particular lines of research, embracing a neurologist, gynecologist, psychologist, and an oculist, who also examines the ears, throat and nose. In order to provide proper room for these special examinations, a high and well-lighted basement under one of our long wards has been fitted up and furnished.

THE STUDY OF INSANITY.

The state hospital which devotes its professional energy only to the care and treatment of its patients, does but half its duty to the commonwealth that supports it. Although it may alleviate much suffering, it is constantly adding to the burden of the State, without materially lightening it. The increase of insanity is in this country out of proportion to the increase of population. Our hospital systems are largely responsible for this increase, for, by the use of modern methods of treatment, we are sure of sending to their homes and families a much larger number of recovered patients than was possible under the asylum treatment of a few decades ago, and these recovered patients, renewing their former family relations, rear progeny that are almost sure to be more or less mentally unbalanced, and certainly inherit a predisposition to insanity. It is generally conceded that heredity is the most potent factor in the causation of insanity. Instead of strenuously endeavoring to stamp out the dread scourge, we are spending millions of money and mountains of energy in fostering it—in breeding victims for it. Our

state and private hospital managements have not been spending too much time upon the problem of curing the insane, but have given too little attention to the study of the prevention of insanity.

The amassing of carefully compiled data obtained from clinical and post mortem study of the insane is essential to an intelligent basis for efficient preventative treatment. In a small way, therefore, the medical staff is attempting to contribute to the data that is being gathered by studying our patients, recording the facts observed, and compiling them in such a way as to make comparisons easy and correct, and finally publishing such facts as seem to be of most interest to the medical profession.

Believing that no field of research, not excepting that of post mortem neuro-pathology bids fair to yield so much information that will add to our knowledge of insanity as will that of psycho-pathology, I have added to the professional armamentarium an outfit for clinical psychological investigation, such as is used in the universities of the old world, and have employed a competent psychologist to assist in the study of our patients. This, I believe, is the first attempt in this country to utilize the entire time of a psychologist in this special work.

The clinical study of the blood, the secretions and excretions, as now followed, yields results which are of much value in the treatment of patients. The compilation of anthropological data is made an important feature of our work, and while its value in the individual case is limited, in the aggregate the information properly classified will be of great statistical worth. One of the most important features of our work, and one which is reflected throughout the whole professional work of the institution is post mortem pathology. One pathologist and assistant are employed constantly in the operating room or laboratories. Over one hundred autopsies are thoroughly performed each year, of which microscopical, chemical and bacteriological studies are made. It is still recognized that in all branches of professional work there is no study of as great practical importance to the profession as that at the post mortem table, and no study arouses more intelligent scientific interest. The more advanced and mature studies will be given to the profession in the *Psychiater*, which is published four times a year by the medical staff, and consists of a report of the professional work done in this hospital.

I wish to thank your honorable board for your coöperation and the hearty support that you have invariably given me.

Respectfully submitted,

WM. G. STEARNS,
Superintendent.

KANKAKEE, *Illinois*, August 31, 1898.

REPORT OF THE TRUSTEES.

HOSPITAL, ILLINOIS, Dec. 3, 1900.

To the HONORABLE JOHN R. TANNER, *Governor State of Illinois.*

SIR:—We have the honor to submit herewith the 12th biennial report of the trustees, superintendent and treasurer of the Illinois Eastern Hospital for the Insane at Kankakee, Illinois.

Since our last report was made the Hon. John J. Magee, then trustee of this institution, resigned and the vacancy occasioned by his resignation was filled by the appointment of the Hon. Almet Powell of Iroquois county.

It has been the endeavor of this board, under your instructions, to render the service of this great institution as perfect and complete for the noble objects for which it is intended as possible. To that end the superintendent, the medical staff, the business staff and practically all of the employés of this institution have lent their aid. We are constrained therefore at the end of this biennial period to point with satisfaction to the record, institutional and financial, made during this period.

It has been the endeavor of this board also to appoint only such persons to positions therein as are qualified by previous experience, character and ability to fill the same to the best advantage. A high standard of physical, mental and moral qualification has been adopted by this board as requirement for applicants to the service of this institution and the consideration of merit has ever been the first.

We feel that in this endeavor we have been measurably successful and that the service rendered by this institution to the taxpayers of this State in the care of its unfortunate wards has never been better than now. This result we feel is largely due to the policy of the board in this respect which has secured to the State a higher grade of employés, physically, mentally and morally, than ever before. This fact is attested by the great number of applications which have come to the superintendent of this institution from the various institutions in Iowa, Indiana, New York, Massachusetts, and other states for employés trained in this hospital, all of whom are residents of the State of Illinois.

We have also adopted the policy suggested by you of purchasing all supplies of every kind and character from dealers and manufactures within the State of Illinois, because we have agreed with your

view often expressed to us, that the State of Illinois is large enough and good enough to furnish to every State institution all of its employés and all of its necessary supplies.

The detail of the various improvements which have been made under the direction and policy of the administration are fully set forth in the report of the superintendent herewith submitted, to which our endorsement is given and to which attention is particularly directed.

The appropriations recommended by us for the biennial period ending June 30, 1902, are as follows:

For ordinary expenses for two years	$690,000 00
Cement walks	3,500 00
For curbs, macadam and storm sewers on streets	2,500 00
Fencing—500 rods wire fencing	625 00
Cottage—farm ward	14,000 00
Farm buildings—miscellaneous	5,000 00
Farm teams, live stock and farm implements	4,000 00
Furnishing new chapel	5,000 00
Work shop, tools etc	1,000 00
Remodeling old amusement hall	6,000 00
Lawn and irrigation plant	500 00
Slate roof	2,000 00
Furniture—$5,000.00 per annum	10,000 00
Improvement of grounds—$2,500.00 per annum	5,000 00
Improvement of garden—$4,000.00 per annum	8,000 00
Pathological Laboratory—$2,000.00 per annum	4,000 00
Library and reading room—$1,500.00 per annum	3,000 00
Painting—$5,000.00 per annum	10,000 00
Repairs and improvements—$20,000.00 per annum	40,000 00
Fire escapes and fire department	5,000 00
Telephone system	3,000 00
Additional farm lands	25,000 00
New boiler	3,500 00
For completing filtering basin	5,000 00

In closing this report we especially desire to express to your Excellency our sincere thanks for the wise counsel and splendid support rendered by you, to every plan looking to the betterment of the service of this great institution to the taxpayers of Illinois.

Respectfully submitted,

LEN SMALL,
GEO. T. BUCKINGHAM,
ALMET POWELL,
Trustees.

SUPERINTENDENT'S REPORT.

To the Honorable Board of Trustees,

GENTLEMEN:—I have the honor to submit to you the twelfth biennial report as superintendent of this hospital. The duties resting upon me, as well as my responsibilities, have been rather more difficult to meet on account of the fact that I took charge of the hospital in the middle of an administration. It affords me great pleasure to say, however, that I have received excellent support from the board and our relations have always been exceedingly friendly, so that the work outlined by the board, and by my predecessor, has been, so far as lay in my power, carefully carried out.

The appropriations for various purposes, including "special fund" and "fund for improvement and repairs," have been judiciously dealt with and our accounts will bear the closest scrutiny in every particular.

Since I assumed charge of the institution there has taken place a steady advance in prices, especially in food supplies and building material. The advance in food supplies alone amounts to from 25 to 50 per cent. Notwithstanding this we have enlarged our diet list, being convinced that good, wholesome food is an absolute essential to the care of our unfortunate insane people; at the same time special care was exercised so that there was no unnecessary waste of food. For the future, considering the steady advance in prices still existing, our appropriation, $140 per capita, will be inadequate and we shall be obliged to ask the Legislature to increase the appropriation to at least $150 per capita.

The officers at the heads of different departments have been faithful in the discharge of their duties,and I sincerely thank them for their valuable assistance in the administration of the many details necessary to make running of the institution a success.

The work of the medical staff has been highly satisfactory, and both the capability and faithfulness of the members of the staff is recognized by all and fully appreciated.

The supervisors have shown great vigilance and looked with great care after the welfare of the patients so far as was in their sphere. The result of this is that fewer casualties have occurred than ever before for the same period in the history of the hospital.

The grade of attendants and nurses we were able to secure is, I think, above the average. Many of the young men and women seeking employment here are working their way through college and their stay in the hospital is of necessity temporary only, but our records show that they do better work, because intellectually they are better fitted to understand the many needs of our patients. This is particularly true of medical students employed here. They highly appreciate the many advantages offered in the hospital for the study of mental and nervous ailments as well as general diseases and surgery.

The training school has been under the special supervision of the chief of staff, Dr. Emmet F. Enos. The course of lectures and special training extends over two years. The senior class is selected from the junior class by competitive examination and by consideration of special fitness of the individual for the work. No one is admitted to the senior class without a preliminary education entitling him, at least, to a second class teacher's certificate. The fact that graduates from our school have been placed in charge of hospitals, and have done excellent work wherever employed, is a very creditable showing for the high grade of training received.

MEDICAL DEPARTMENT.

It has been my object to make the outline for the medical work as practical as possible and to bring about a close relation between the patients and myself. It is evident that with almost 2,300 patients such a plan at the best, can only partially succeed, but I am certainly pleased to note that much has been done in that direction.

The classification of patients into curable and incurable I consider inferior to the division of all patients in the large groups; useful, capable of self-support, helpless or dangerous. It appears cruel to me to forever lock up in wards a human being just because his mental faculties have suffered some harm by the severe storm of disease. Practical experience teaches us that many such patients can, and do, again become useful members of the community. It has been my policy, therefore, to favor, so far as prudence allowed me, trials of patients outside of the institution whenever I found some one that the patient could be trusted with. The results have been indeed encouraging.

ENTERTAINMENT OF PATIENTS.

The monotony of institutional life has always been a thorn in my eyes. While a considerable number of able-bodied patients enjoy almost constant employment out of doors, there is a large number of patients, especially women, that are unfortunately, too little employed and too closely confined, simply because there is so little they can do outdoors. To obviate, in a measure at least, this great difficulty our program of entertainments, especially musical, has been considerably enlarged and one new feature added that has proven a decided success. I refer now to patients' weekly excursions to a grove about two miles up the river. These we are able to safely make by means

of a large steamer from Kankakee. Two boat loads of patients, about 500 in all, enjoy this outing. The complete change of surroundings, the beautiful scenery along the river and the healthful exercise at the grove all contribute to make this the most popular of all entertainments and certainly the most helpful. During the summer outdoor games for unemployed patients are greatly favored and tennis as well as croquet sets are being used almost constantly.

www.libtool.com.cn

NEW DEPARTURES IN PATHOLOGICAL DEPARTMENT.

Our pathological department suffered rather seriously on account of a fire that took place in the laboratory about a year ago. Considerable portion of our scientific apparatus, as well as tissue embedded in paraffine so suffered by heat, smoke and water that much had to be thrown away.

The necessary repairs required a considerable length of time and the work naturally had to be interrupted. At present, however, the work in the laboratory continues with renewed energy and with true scientific spirit. Some departures were made in this line of work which I trust will prove beneficial. While we do not lose sight of the importance of special work in neuropathology, we can not help feeling that there is an urgent need of work also in other lines of medicine related to mental diseases.

The more we know of the metabolic and katabolic processes within the human body the more impressed we become with the fact that an extremely close relation exists between all organs of the body and that all organs suffer by the defective construction or function of one. Physiological chemistry taught us many a lesson we have greatly benefited by and that helped us in changing many of the old ideas. The study of the typhoid, suprarenal and other glandular activity opened our eyes to a large extent, but there still remains more to be discovered. There is little doubt that some of the forms of insanity are caused by physiologico-chemical changes, by disturbances of metabolism or katabolism. For these reasons more attention is now paid than ever before to the study of blood and other fluids of the body that are likely to reveal something of interest in this line.

Another important feature was added to the work in the pathological laboratory. I refer to the addition of apparatus and conveniences necessary for the performance of finer, clinical, diagnostic tests, such as many complicated, chemical tests for uncommon constituents of urine, also Widal's reaction in typhoid, cultivation of bacteria from fluids and tissues of the body, etc., so as to make this laboratory a valuable aid in diagnosis as well as in the treatment of disease.

NEW AMUSEMENT HALL.

The amusement hall and gymnasium combined, now in the process of construction, cause me to feel intense satisfaction and hearty thankfulness to the administration for the appropriation so earnestly sought for. It will help us wonderfully in providing helpful means,

not only for the diversion of mind, but for the physical culture of patients as well. Owing to the fact, however, that we were unable to erect the building last year, and the price of all building material advanced in value to the extent that it was impossible to erect the building and furnish it as we had hoped within the limit of the appropriation, it will be necessary to ask an appropriation of the Legislature of $5,000.00 for furnishing.

www.libnol.com.cn

THE OLD AMUSEMENT HALL.

The old amusement hall that was totally inadequate in size to meet the wants of the hospital we desire to convert into sleeping apartments for night watches who are now compelled to sleep in the basement of the main building. This basement is damp in spite of all precaution taken and much complaint has come to me from the injury to health resulting therefrom. I desire to raise the upper story and make other changes that may be required to accommodate some thirty-five attendants with comfortable lodging places during the day. We estimate the cost of making these changes at $6,000.00.

CHANGES IN OUR HOSPITAL WARDS.

The acutely maniacal, melancholy, confused or delirious patients enjoy to a full measure the special bed treatment and careful nursing instituted here by one of my predecessor. Graduated and experienced nurses are employed on such wards and everything is done in the way of diet, well regulated daily exercise, and careful medical treatment to favor improvement in such cases.

An exceedingly important step was taken and much good accomplished by the reconstruction of cottage No. 9 north, for a hospital ward for women. The old infirmary building was both too small and poorly constructed for such a purpose. Ventilation and other necessary hygienic features were sadly in need of improvement. We are justly proud now of a spacious, well ventilated, conviently arranged hospital building with special diet kitchen, large, airy halls with plenty of light, excellent ventilation, provided with a large operating room, constructed to answer modern requirements of surgical simplicity and cleanliness. There are also two rooms adjoining the operating room fitted out as dispensing and anasthesia rooms respectively.

The better, cleaner class of patients is given the lower floor, while the much demented, untidy patients are taken care of on the second floor of the new hospital building.

The former infirmary building answers now very well the requirements of a nice, quiet home for weak, old women.

The former "Nurse's Home," for male attendants, was again converted into a ward for feeble male patients. Practical experience taught us that the cottage was not suited for "Nurse's Home" and we received constant complaints from the nurses; another reason for the change was the great need of relieving the hospital ward proper of a large number of simply weak old men, requiring no special medical

care, but only a little additional attention to their comfort. Thes both aims, I am confident, were accomplished by the change mentioned.

www.libtool.com.cn

ACCOUNTS.

The excellent system of accounts inaugerated by my predecessor, and approved by your board, has been maintained throughout with some few changes suggested by a year's practical application of the system. The changes consist, chiefly, in the elimination of useless forms, which tended only to encumber the records of the institution without in any way adding to the efficiency of the service. I insist on a careful record of every minute detail, but a superfluity of forms is more liable to lose and confuse a transaction than to record the plain facts. I believe I am warranted in stating that these changes have saved the salary of at least one clerk and retained every efficient feature.

I have given much attention to old accounts and delinquent bonds which have been a source of annoyance to all State institutions for years. My efforts have been attended with a great degree of success, with a very flattering prospect for the future in the same line. The excellent system of patients' accounts adopted by your board about three years ago (consisting of a very accurate itemized account with each patient), has been a great aid to me in this matter. The itemized account plan has proven to be so far ahead of the old plan of "incidental expenses" that I would recommend it to all institutions not otherwise provided.

The system of bookkeeping at the storehouse, while it is entirely independent of the records of the institution, I recognize as a most valuable aid to an economical administration, in that the food supply is compared one month with another, even to the preceding year, item by item, and checks any increase so very liable to occur in handling large quantities of goods. I would recommend its continuance, with any improvements that a further test of the system may suggest.

REPAIRS AND IMPROVEMENTS—WATER WORKS.

During the past two years extensive and much needed improvements have been made in our water system; over five thousand feet. of water mains were placed and ten new fire hydrants.

The domestic water system, as now arranged, can be separated from the fire mains by means of valves, thus relieving the pipes, faucets, etc., of the high pressure necessary for fire protection.

HEATING PLANT.

The old system of "hot air" heating has been abolished, the entire institution being now heated by steam from one central plant. The installing of this plant has demonstrated a great saving in fuel per year and proves the expenditure to be wise and economical.

LIGHTING.

This system has been remodeled and improved. New dynamos, engines, switch-boards, etc., have been added until now the plant is in first-class condition and showing good results; but in increasing our power and lighting facilities and changing the system from 110 volts to 220 volts necessitates the placing in of an additional boiler. During extreme cold weather every available inch of grate surface is now used, all our heat coming from a central plant, and in case of accident to the present boilers our 2,300 patients would be at the mercy of the cold, without additional grate surface.

POWER PLANT.

Two new boilers have been placed in the power house and other valuable improvements made. The plant in its present condition is highly satisfactory and justifies the expenditures made.

PLUMBING.

The plumbing has been improved by the changing of the old hopper closets with 118 modern sanitary flushing rim tank closets in the wards, and in addition to this we found it necessary to change the old closets in the center building on account of their unsanitary condition, four in number, adding new bath tubs and lavatories.

Details of expenditure for the above improvements are as shown below.

Work.	Material	Labor.	Total.	Remarks.
Installing new boilers and remodeling furnaces	$8,423 40	$1,576 60	$10,000 00	Includes 2 water tube boilers, foundations, pipings, connections, etc.
Remodeling power plant	21,443 00	.....	21,443 00	Includes 1 150 K. W. generator engine, 1 100 K. W. generator engine, 23 motors, foundations, switchboard, shafting, etc
Remodeling plumbing system	7,600 00	26 83	7,626 83	Includes 188 closets and monolithic work
Remodeling electric plant, wiring cottages, etc	12,963 92	679 32	13,663 24	Wiring for cottages, heating irons, feeders, etc
New furniture and repairing old	4,875 98	1,626 01	6,501 99	Includes 3,651 yds. carpet, rugs, etc.
Cement walks	1,406 70	1,093 30	2,500 00	.....
Filter basin, boilers and pumps	8,880 23	1,119 77	10,000 00	.....
Propagation building	1,276 63	223 37	1,500 00	.....
Lawn irrigation	800 00	.....	800 00	.....
General repair work	15,428 20	3,134 65	18,562 85	.....
	$83,118 06	$9,479 85	$92,597 91	

IMPROVEMENT OF THE WATER SYSTEM AND FIRE PROTECTION.

At the time of the fire at the farm the supply of water available for fire protection was carried in a 4-inch pipe through a very circuitous route. For the future protection of the farm buildings I have caused to be laid a direct line of 1,600 feet of 6-inch pipe with direct pressure on eleven fire hydrants, giving excellent protection to all of the buildings in this group.

Our water system which has grown with the institution which it supplies, by the addition of more and larger pipes to meet the increased demand, is of not less than three distinct periods of construction, each cross connected with the other, and while most of the water was delivered from the pump station through a 10-inch main, nearly all of the fire hydrants still remaining on the old 4-inch pipes, being supplied by cross connections from the 10-inch main, thus reducing the pressure at the hydrants.

www.libtool.com.cn

By laying over 2,000 feet of 10-inch pipe, and the cutting out and re-connecting of the hydrants, we now have them nearly all connected directly on the 10-inch mains, and by cutting out some of the cross connections we have created a double system of water mains, the smaller pipes supplying the buildings with water, tower pressure, and by the closing of one valve at the pump station the fire hydrants can be supplied with 125 pounds fire pressure without subjecting the network of small pipes, faucets, closets and other plumbing to the strain of the high pressure given.

This remodeling of the water system necessitated the laying of 5,030 feet of cast iron pipe, four tons of fittings, three and one-half tons of lead, forty-five valves and ten new fire hydrants, at a cost of over $5,200.00.

GARDEN AND GROUNDS.

Connected with this institution is about 1,000 acres of land, divided into building and pleasure grounds 175 acres, vegetable and fruit gardens 175 acres, and the balance into farm land and pasture.

In the management of this large area I have in mind the accomplishment of three general results. First, the pleasure and health of our population of 2,700 people. Second, the providing of employment to a large class of patients who are much benefited by regular work in the open air. Third, the great economy effected by utilizing the help provided in producing most of the requirements of the institution in fruits, flowers, vegetables and farm products.

Much has been accomplished in improving our grounds in the past two years by providing fifty new hose connections for watering the lawns, and the enlargement of the greenhouses which has enabled us to use 30,000 bedding plants and to supply the wards with 40,000 cut blooms of asters, carnations and chrysanthemums.

On account of the system of detached cottages in use here, many streets and walks are needed to connect the forty-five or more buildings comprising the institution. Twenty-eight thousand square feet of cement walk has been laid in the past three years, but twelve cottages are still without connecting walks to complete the system of communication, and walks are also needed from the west entrance of the grounds to the cement walk at No. 5 north, and from the south wing to the farm house. This improvement will require 33,000 square feet of cement walk, for which we will ask of the next Legislature for an appropriation of $3,500.00. Besides the improved appearance of the grounds and the ease of communication afforded by

these walks, much dirt is saved from being tracked into the wards, and means are provided for exercising and airing the patients in weather that would otherwise be impractical. Fifty rods of street has been macadamized and furnished with cement curb and gutter during the past year, at an expense of $750.00. This has been a valuable improvement in both appearance and utility and should be extended on 100 rods of street much in need of this improvement. Five hundred rods of fencing is needed on our grounds and gardens. This should be woven steel wire with steel posts. With this fencing we would be enabled to pasture about 100 acres of groves and pleasure grounds with sheep, and thus save much expense in the maintenance of the grounds and add a source of revenue to the farm.

One of the important problems of a great institution is the supplying its population with a variety of wholesome, appetizing and economical food. Our vegetable and fruit gardens have greatly aided us in dealing with this question. By putting into practice the best market garden methods we are now being furnished from our own gardens with an annual supply of from 24,000 to 27,000 bushels of thirty-five varieties of vegetables, or between nine or ten bushels per capita of our population. This is an increase in the past ten years from an irregular supply of from 12,000 to 15,000 bushels of eighteen of the more common varieties of vegetables to a regular supply of the above amount, including radishes, lettuce and green onions during the winter months. This has been effected by a slight increase in garden expenses and has resulted in a large saving in the cost of other food stuffs.

The supply of small fruits has been increased from 300 bushels per year ten years ago to an average of 1,050 bushels per year for the past three years. Much more could be done in this direction and more plantings should be made during the next two years Considerable ornamental planting remains to be done on the north and west side of the grounds; the west side of the north cottages are especially exposed to the northwest winds, and could be both beautified and protected by judicious planting. Five huudred dollars should be appropriated for this purpose.

Some of the principal garden improvements of the past year is the bedding of five vegetable plant and forcing houses, each 16x20 feet. The enlargement of our hot bed yards; the providing of a suitable tool house for garden tools, the building of an onion house 20x60 feet for storing 1,500 to 2,000 bushels of onions and the laying of upwards of 3,000 feet of 15x18-inch sewer tubes, and thus doing away with an unsightly and unsanitary open ditch between the grounds and gardens.

Also, for the past three years we have been canning on an average 20,000 to 25,000 gallons of the products of our gardens—sweet corn, tomatoes, pumpkins, apples, crab apples, cherries, strawberries, grapes and blackberries. We use for tomatoes, corn, etc., a four gallon tin can with screw top and rubber band, for the fruits a two quart glass jar.

The canning is done with the regular help at the various kitchens. After canning it is placed immediately in the cold storage at a temperature of 30 degrees to 32 degrees thus insuring the keeping of products that would otherwise be a failure.

www.jbgoo.com.cn

We succeed in canning sufficient to last the entire year.

THE FARM WARD.

The building now used as a farm ward is an old frame structure, part of it an old farm house standing on the land when the hospital was located here, and constructed thirty or forty years ago, with some additions of a somewhat later date. The building is now getting old, is hard to heat in winter and needs many repairs to keep in tidy and sanitary condition. This building is located at the farm and accommodates thirty patients who are mostly employed about the barns, driving teams and doing other farm labor, all of them having practically a parole of the grounds. This building should be replaced with a suitable and substantial stone building for forty patients at an expense of $350.00 per patient or $14,000.

FIRE AT THE FARM.

On June 2, 1899, a fire occurred at the farm which destroyed two of the largest barns together with two silos, farm tools, engine, shafting and machinery, several thousand bushels of grain, etc., causing a loss of from twelve to fifteen thousand dollars. One of these barns with silo, engine, machinery, etc., has been replaced at an expense of $7,000. I do not think it advisable to replace the other barn on the old site on account of the danger of completing a chain of buildings that would, in the event of another fire, endanger them all. I therefore ask for $3,000, for miscellaneous farm buildings, which will enable me to dispense with the replacing of this barn.

FARM.

We have in farm land, proper, 650 acres; of this 226 acres are pasture, 80 acres meadow and the balance under cultivation.

During the past two years we have been favored with conditions favorable to the growth of crops, and with the careful painstaking and industry of our farmer, aided by some thirty of our patients who took great interest in farming work, we have been able to produce of various crops as follows:

1899.

Corn	2,500 bushels.
Oats	5,760 "
Hay	100 tons.
Ensilage	600 "
Oats, straw	120 "
Fodder, shredded	250 "

1900.

Corn	3,500 bushels.
Oats	4,943 "
Rye	520 "

Hay	160 tons.
Ensilage	500 "
Oats, straw	150 "
Rye, straw	30 "
Fodder, shredded	250 "

www.libtool.com.cn

which are, certainly, results reflecting credit upon our farmer, not only in the intelligence exhibited in growing the different crops, but in the careful handling of patient help, as no accident has occurred, and none have complained of overwork. The spirit of emulation seemed to pervade them all as to who could best work and best agree.

STOCK.

January 15, 1899, our herd of cattle were subjected to the Tuberculin test by the State Vetenarian, Mr. Lovejoy, and seventy-three of our herd were found diseased. This was a surprise to us as they were apparently healthy, in good flesh and giving abundance of milk. They were ordered taken to Wolf Packing House, Chicago, and were slaughtered in the presence of myself and others. Nearly all slaughtered in our presence gave evidence of the disease tuberculosis, in a marked degree.

We have on hand now, of healthy animals, 160 head; 96 milch cows, 62 heifers and 2 bulls. The milk produced from our herd for the past two years is as follows:

1898.	July 1st to December 31st	44,918 gallons.
1899.	January 1st to December 31st	68,345 "
1900.	January 1st to June 30th	24,336 "
	Total	137,599 gallons.

HORSES.

Our stock of horses used upon the farm and garden and for general work, consists of thirty-one head. A large proportion of them are old and decrepit, having been in service for many years; it will be necessary to have in another year six additional teams, which will require an appropriation of at least $1,500 for this purpose.

Respectfully submitted,

J. C. CORBUS,

Superintendent.

REPORT OF THE TRUSTEES.

HOSPITAL, ILL., Nov. 1, 1902.

TO THE HON. RICHARD YATES, *Governor of the State of Illinois.*

SIR—We have the honor to submit herewith the fourteenth biennial report of the Trustees of the Illinois Eastern Hospital for the Insane; also report of the Superintendent, showing the condition of the hospital and improvements inaugurated since our last biennial report; also detailed report of the Treasurer, showing all receipts and disbursements during said period.

Since our last report the Hon. George T. Buckingham of Vermilion county, then trustee of this hospital, resigned and the vacancy occasioned by said resignation was followed by the appointment of Hon. William E. Murphy, of Douglas county.

TREATMENT.

No effort has been spared within our power and means that would add to the mental as well as physical relief and comfort of the unfortunate people intrusted to our care. We believe the hospital should be conducted on a home-like plan, thereby encouraging our medical staff and nurses and enabling them to daily note the steady improvements resulting from kind treatment, careful study, and scientific medical treatment.

Six years ago, under the Democratic administration, the average monthly pay-roll amounted to $12,500; the number of patients 2,150. The present average monthly pay-roll amounts to $10,200; the number of patients 2,207. The average salary paid the nurses and attendants six years ago, was $20.46 per month, while the superintendent received a salary of $5,000 per annum and expenses for himself and family. The chief engineer received a salary of $2,000 per annum and expenses, and other officers in proportion. This board believing that the pay of nurses was not sufficient, while the pay of officers was too large in proportion to the appropriation, has followed the example of their immediate predecessors by gradually and equitably equalizing their salaries, until at present the average salary of nurses and attendants is $25.00. The superintendent's salary is now $3,500; chief engineer, $1,000. We realize that $25.00 per month is far from being just remuneration for the faithful services of our nurses.

We have been unable to retain many of our experienced nurses owing to private and public hospitals offering higher salaries than our appropriation enables us to pay. It is a well known fact that graduates of our training school have no trouble in securing positions in the leading hospitals of the country. Representatives from private hospitals have repeatedly visited Kankakee for the express purpose of securing our trained nurses, and have often succeeded in so doing.

During the administration of your Excellency, this board has endeavored, and succeeded to a fair degree, in establishing a merit system, whereby promotions are based on length of service, competency and morals of employés. By carefully watching and often inspecting all parts of the institution and keeping in close touch with officers and employés, and noting the careful management and efficient service rendered, we have reached a high standard of excellency and efficiency in all departments. We also feel we can point with pride to the high standard of our officials and employés and the valuable service they are rendering.

While the superintendent has never hesitated to discharge employés for neglect of duty, incompetency or cruelty, no employé has been discharged for political reasons.

Some unavoidable accidents to patients have occurred, but not more than at other hospitals, and even a less per cent than ordinarily occur outside of hospitals among sane people.

We recommend that the ordinary appropriation be increased sufficiently to enable the hospitals to retain their trained nurses, by allowing sufficient compensation, and also to increase the number of attendants, thereby lessening the possibility of accidents.

For the various needs of the hospital for the coming biennial period we refer you to the superintendent's report, and especially call attention to the condition of our water supply, which, on account of its roily and unsanitary condition, has been very unsatisfactory to the board and a source of much complaint from the public and friends of patients, as well as from the employés and patients of the institution. At times it is not only difficult to secure a supply of suitable water for laundry, cooking and boiler purposes, but the condition of the water interferes with a proper degree of cleanliness in washing and bathing.

INVESTIGATION.

Owing to sensational charges and damaging reports emanating from certain newspapers unfriendly to your administration, it was decided at a regular monthly meeting of this board, held at the hospital Monday, August 4, 1902, that we advise Acting Governor W. A. Northcott (your Excellency being absent from the State at that time), fully regarding alleged charges. Accordingly a detailed report was forwarded Acting Governor Northcott, with a request from this board that he submit same to the State Board of Public Charities and that they be requested to make a thorough investigation. In

accordance with said request the State Board of Public Charities convened at Hospital Monday, August 11, 1902, the following members being present: William Jayne, M. D., Springfield, president; John Gibbons, Chicago; Ensley Moore, Jacksonville; A. S. Wright, Woodstock; J. A. Glenn, M. D., Ashland, and Col. J. Mack Tanner, Springfield, secretary. The board was in session August 11, 12 and 13th. In order to ascertain the facts, they had before convening invited through the public press any and all persons who had complaints against the hospital or management, to be present or submit same in writing. The Protective Agency for Women and Children and Civil Service Reform Association were both represented by their attorneys during the entire session and were requested to assist in the investigation and file all information obtainable.

All allegations submitted by said attorneys, together with all newspaper charges, were fully investigated by the board. All persons suggested by attorneys or newspapers having knowledge of alleged misconduct were requested to appear and were closely questioned by the board, as well as by the various attorneys, and a more conscientious or searching investigation would have been impossible.

The findings of said board exonerated the management of the hospital of all charges made or published, and convinced all fair minded people that it was simply a case of malicious persecution instigated by the partisan press and their hired tools in a vain attempt to injure your administration, ruin the hospital discipline and tear down the high standing of the Illinois Eastern Hospital for the Insane.

The animosity of the attack is clearly demonstrated by the continuous guerilla warfare of certain newspapers, seizing upon every opportunity to magnify and misrepresent, even sending special correspondents to interview minor employés and insane parole patients in an attempt to secure reports derogatory to the hospital. The accidental escape of a harmless patient was sufficient cause for a prominent daily paper to send a staff correspondent to Kankakee, whose visit was followed by a distorted and sensational story, intended to lower the hospital in the eyes of the people and cause uncalled for anxiety to those who have friends in the hospital.

Respectfully submitted,

LEN. SMALL,
ALMET POWELL,
W. E. MURPHY,
Trustees.

SUPERINTENDENT'S REPORT.

To the Honorable Board of Trustees, Hospital, Illinois.

GENTLEMEN—In compliance with the law, I herewith submit for your consideration the 13th biennial report of this institution beginning July 1, 1900, and ending June 30, 1902. The number of patients in the Hospital, July 1, 1900—2,248. The following table shows the movement of population of the Hospital for the past two years:

NUMBER OF PATIENTS IN THE HOSPITAL.

	Men.	Women.	Total.
July 1, 1900	1,170	1,078	2,248
Admitted during the two years ending June 30, 1902	558	459	1,017
Whole number treated	1,728	1,537	3,265
Discharged	421	345	.....
Died	192	120	.....
Percentage of deaths for the two years, 7.1.	623	465	312
Remaining June 30, 1902	1,105	1,072	2,177
Daily average number present during the two years	1,105.89	1,026.69	2,132.58

Owing to the fact that we have more accommodations for the males on the south side—having 163 more beds on the male side than the female—we have during the past two years been crowded for space to properly classify our female patients. This was relieved temporarily by the transfer of 169 patients to Bartonville—117 males and 52 females. The mortality for the past two years is 7.1 per cent, which is extremely low and indicates plainly the excellent care taken of our unfortunate inmates. Many of them are sent to the Hospital in very feeble condition, requiring to be placed immediately in the infirmary, where they can receive special diet and special care.

THE MEDICAL DEPARTMENT.

As I stated in my previous report, I have endeavored to make as practical as possible, and do make the relation between myself and patients as close as possible. Take a large hospital like this—nearly 2,300 patients, this can only be partially successful, but I have been

highly pleased with the success of my efforts in this direction. The medical staff has been very efficient, discharging their duties faithfully, their efficiency increasing as the years go by. Our medical library has been added to until it contains most of the modern works pertaining to medical science. There is a daily meeting of the staff in the library room, and a report is made by each member of the staff on the condition of the wards to which they are assigned, and it is also used as a reading room, which is being availed of by the staff and highly appreciated.

www.biblio.com.au

PATHOLOGICAL DEPARTMENT.

For the past two years the pathological work has been directed by clinico-pathological methods; for it is from the so-called functional maladies that we expect our highest percentage of mental recoveries. The waste tissue products stored up in the body necessitate bacteriological and chemical examinations of the excretion, blood lymphs and other fluids. Much valuable work along this line has been done. The urine is examined in all admissions, blood examinations are made in all cases when required, as an aid to diagnosis. Over 1,200 urinalysis have been made within the past two years. By many of the blood examinations we have been able to select certain well established facts which bear upon disease of the brain, as well as other organs. It is very necessary in all cases of pulmonary trouble that a microscopical examination of the sputum be made, as tuberculosis is much more common among the insane than the sane. Such technical examinations are not only required in our modern asylums for hygienic protection, but as an assistance in the therapeutics and course of the disease. Tubercle bacilli have been found in the sputum of all the isolated patients in the tubercular department of the general hospital wards. Widals reaction for typhoid fever has been made in all the cases of enteric fever and found to be a valuable aid in early treatment of the disease. Chemical examinations of the gastric juice indicating inactivity, as well as diseased glandular secretions have accounted for some of the auto-intoxication insanities.

The facilities offered for neuropathology and morbid anatomy have been hampered somewhat by our being unable to get permission to hold autopsies on many of the desirable cases. Post mortems are held in all permissible cases, as we realize that cellular pathology is the ground work of all pathological science. Degenerations of the nerve cells as seen by the ordinary staining process requires extensive investigation of only the freshest material. Specimens of tissue embedding are being accumulated, as well as an interesting collection of museum material.

The work in the laboratory is being conducted with true scientific spirit. A considerable portion of our scientific apparatus was destroyed by a fire in the laboratory three years ago, much of which has been restored, but more apparatus of modern make is yet required. It is hoped that the department may receive generous support and encouragement in the future by a liberal appropriation.

NEW X-RAY AND STATIC ELECTRICAL MACHINE.

www.libtool.com.cn

It being now almost universally conceded a hospital not possessing an apparatus for making X-Ray examinations and the administration of static electricity as a therapeutic agency is regarded as being behind the times. A Holtz machine, with complete equipment, has been added to our hospital armentarium. The treatment of insomnia, hysteria, nurasthenia and debility by static electricity, is being more frequently employed by the medical profession. Examinations by the X-Ray, for the affections of the cranium, detection and localization of foreign bodies, investigating fractures and dislocations, make such an apparatus indispensable. There yet remains an extensive field for Roentgen ray work, which will doubtless be of assistance in the near future in the medical diagnosis of soft tissues. So far it has been of great practical benefit to us, and there is no doubt but we will avail ourselves of the use of electricity in the treatment of more cases in the future than we have in the past.

GRADE OF ATTENDANTS AND NURSES.

The grade of attendants and nurses we have been able to secure, I think, are still above the average. This I attribute in part to the privileges that they enjoy, which is freely given them as long as it does not interfere with their duties or discipline of the Hospital. Many of them are working their way through college, and while their stay here is but temporary, they are intelligent and are earnest in the performance of their duties. Our training school continues to be a source of pride to us. The high reputation attained by our training school during the past few years has been more than sustained during the past two years, as a number of our trained nurses who have left the Hospital and engaged in private nursing, have succeeded exceedingly well in demonstrating their ability, several of our graduates now being successfully engaged in private nursing, or in charge of the nursing in other hospitals. Our two Hospital wards, with a capacity of 72 and 90 beds, are conducted on strictly the same principals as in modern emergency hospitals and afford the finest opportunities for the education of nurses. The training school is under the special supervision of Dr. Samuel A. Graham, chief of staff, and his assistant chief of staff, Dr. C. F. Shronts. They require a preliminary education as a foundation for the special training; each applicant being required to have a teacher's certificate of the second grade or diploma from a recognized high school, or other satisfactory evidence of such attainments.

AMUSEMENTS.

Every effort has been made in the past two years to furnish all inmates of the Hospital as much recreation as possible. The trips up the river by steamboat have been continued when the weather would admit, and surpasses all other means of recreation that has been devised for them. Our weekly dances and concerts and other entertainments that we can now give, owing to the completion of our new

amusement hall, relieves the tedium of their confinement here and adds much in diverting their minds from self, contributing much to their recovery.

www.libtool.com.cn

FARM WARD.

The same reason that was so obvious two years ago as to the necessity of a farm ward for the admission of forty patients, is much more apparent at this time that this improvement can not much longer be delayed. It is an old building that was constructed 40 years ago as a farm house and converted into a farm ward. It is a veritable tinder box, and in case of fire there would undoubtedly be a great loss of life before the patients could be removed, and I think it is absolutely urgent that a building of stone be constructed similar to the other cottages. We estimate the cost of this building for 40 patients to be $350 per capita, which would be a very small sum compared to the expense of some of the other cottages in the Hospital, which would make an estimated cost of $15,000.

WATER SUPPLY.

One of the greatest needs of the Hospital at the present time is better water. Our pumping plant consists at present of two duplex and compound steam pumps of a nominal daily capacity of 2,000,000 gallons each, but capable of being increased to 2,500,000 without injury. The power is furnished by two water tube boilers, one of 200 and one of 250 horse power, with which we also heat the central building and the main wing wards, north and south. The Hospital is supplied with water by a circuit of 10-inch water main, with branches of 6-inch and 4-inch, with 74 fire hydrants attached, and a circuit of 6-inch and 4-inch mains, to which the domestic service pipes to all the buildings are attached. In general use both services are carried on the tower, which gives a pressure of 43 pounds, but in case of fire the engineer in charge at the pumping station can cut out the tower service by closing one valve and pump directly into the 10-inch mains, thus relieving the plumbing in the buildings from the extra strain of a fire pressure.

The source of our water supply is the Kankakee river, which, during several months of the year, and during the past rainy summer, nearly all the year becomes so roily that it is unfit for use, for laundry, bathing, cooking, drinking and boiler purposes. To overcome this difficulty, several methods have been resorted to in the past, among others an infilteration tunnel was constructed some 15 or 16 years ago, which proved a failure. About five or six years ago settling basins were built, which have not bettered the situation much, and the water is now worse than at any time in the past on account of the drainage ditches that have been dug in the Indiana marshes on the river above here.

About a year ago, the water company operating in the city of Kankakee, put in a mechanical filter with a capacity of 4,000,000 gallons per day of 24 hours, at a cost of about $35,000. This filter system, after a year's test, during a time when the Kankakee river water has been at its worst, has proven an entire success.

The nominal consumption of water at the Hospital is about 1,400,000 gallons per 24 hours. This is increased during lawn sprinkling and irrigating time to about 2,500,000 gallons. We have estimated that a mechanical filter of similar construction to the one in use for the city, could be built with sufficient capacity for the uses of the Hospital for about $25,000. We, therefore, ask for an appropriation of that sum for the construction of filters.

www.libtool.com.cn

STATE BOARD OF PUBLIC CHARITIES.

We had the honor of a visit from the Board of State Charities, who looked over the Hospital carefully and the list of special appropriations asked for. With their experience and a proper appreciation of our wants, we feel that any appropriation that they may recommend we will cheerfully abide by.

SUPPLY DEPARTMENT.

Generally speaking the supply department is under the same system as two years ago. At that time I found the system an excellent one—in accounting for clothing issued to patients and for itemizing incidentals issued. Since then, however, there has been an improvement in the form of itemizing charges for repairs, etc., which the clerical force appreciates, as the improved system tends to simplify the records, and my experience is, the simpler system the greater chances for accuracy. A complicated account can never be of much information to any one.

READJUSTMENT OF ACCOUNTING FOR PATIENTS' INCIDENTAL EXPENSES.

One of the perplexing items of expense connected with our institution of 2,300 patients is what may be known as the incidental expenses, or small articles required by the inmates. These are in many instances small, yet so numerous as to render them expensive to the institution, unless a system of charges could be instituted whereby an itemized bill could be rendered and collection made. This had been attempted by former administrations with various degrees of success, but not until the past year has a system been inaugurated which has proven an entire success. A set of special ledgers and journals have been put in use and so simplified this multitudinous task as to make the charges of all legitimate incidental expenses practicable, and is so satisfactory both to the institution and the friends of our patients that at the present time we never have a complaint.

Because of the advance in price of all hospital supplies, both food and household, since our last appropriation, we have found it necessary to guard our account to enjoy the pleasure of the smallest surplus. To do this all seeming luxuries have been denied. For instance, a comfort to the eye in house furnishings have been denied that a necessary food could be supplied without going beyond the

appropriation. This action was absolutely necessary in the face of the very marked advance in the price of all articles that contribute to the comfort and welfare of a large charitable institution.

And in the face of this fact the food supply has been excellent; but a very few complaints have reached me, either in regard to quantity or quality. I am sure our population is in possibly more than an average healthy condition, a condition that could not prevail had the food supply been inferior or insufficient.

HEATING PLANT.

Our heating plant, which has heretofore been insufficient, has been improved by adding two batteries of water tube boilers of 250 horse power each, the remodeling of the steam pipes and water heating apparatus in the boiler room and the remodeling of the heating system of five cottages. For this purpose we had an appropriation of $3,500 for a new boiler. These improvements cost about as follows: Two boilers, $3,500 each; new work in boiler room, $1,000; changing heating apparatus in five cottages, $3,500; putting larger returns in tunnel and replacing old pipe, $1,500; the balance of the expense being drawn from the improvement and repair fund.

During the past summer 400 feet of stone tunnels have been constructed, much of it being covered by cement walks, replacing old wooden box tunnels put in temporarily several years ago. This completes all but about 300 feet of our tunnel system. The balance will need attention during the next year.

Our main heating plant now consists of four batteries of water tube boilers and one battery of old style flue boilers at the boiler room, and two batteries of water tube boilers at the pumping station to furnish power for the pumps and the exhaust of which is used for heating purposes. Until within the past two years the farm buildings have been mostly heated with hard coal burners, but within the above period a battery of boilers has been placed at a central point among the farm buildings which now furnishes steam for heating the farm ward, farm residence and farm greenhouses, and furnishes power for the pasteurizing plant and farm machinery at the barn.

Up to the beginning of the present biennial period a complete plant for the production of coal gas had been in operation at this institution, with pipes leading to all the buildings, but with the improvements in electric lighting and steam heating, the use of gas has been dispensed with at all buildings except the laundry. To supply gas for laundry purposes a gasoline gas generating machine was installed at an expense of $500, which is giving excellent satisfaction and effecting a saving of $150 per month over the old and wasteful plant then in operation.

Sixteen thousand, four hundred and fifty square feet of cement walk has been laid, of which 2,550 feet covers tunnels for steam pipe, and 300 feet of cement curbing has been constructed. These walks are a great convenience and of much value in keeping the wards clean, and much more would have been constructed if appropriation had been sufficient.

www.ibtool.com.cn

The barns at the farm destroyed by fire three years ago have all been rebuilt with the appropriations made for the purpose, as well as several hog pens, poultry houses, etc.

The poultry department, under the charge of an experienced poultry man, has grown from a small flock to a plant with six incubators, with a capacity of 1,800 eggs per hatch, and that each year produces 1,500 chickens, 500 ducks and 100 geese. By this means we dispose of and turn to profit a large amount of table refuse.

The system of fire protection has been improved by the erection of two fire escapes of modern design, the purchase of new hose, fire appliances, etc.

The new amusement hall has been seated with 920 opera chairs and furnished with scenery and all the appliances of a theatre of 1,000 seating capacity.

A new sewer over one mile in length and 30 inches in diameter is now nearly completed with the $25,000 appropriated for that purpose, which will be sufficient for all future needs of the hospital as an outlet for sewerage, and a considerable amount will be left to expend in improving the sewerage within the grounds.

The old amusement hall, a good stone building which has been practically idle for the past three years, has been converted into night watch quarters with the money appropriated for that purpose. This was a much needed improvement, as it has heretofore been difficult to find suitable quarters for this class of employés where they could obtain quiet and rest during the day in a building sufficiently isolated from the daily activity.

Our work shops employing from 15 to 18 male patients are a source of great convenience and profit to the institution. In these shops we manufacture brooms, brushes, rag carpets, picture frames, harness, ward slippers, hair mattresses, re-cane chair bottoms, repair boots, shoes, harness, furniture and many other small articles for the institution. During the past two years we have also been doing a large part of the institution's printing. A considerable additional saving could be effected by adding a new printing press and the expenditure of several hundred dollars in new equipment for the shops.

The previous high standard of gardening maintained at this institution has been excelled during the past two years by an increased acreage, as well as by an increase of production on the ground previously in use. We believe we now have one of the largest gardens in the State of Illinois, consisting of 30 acres of fruit and about 135 acres of vegetables, producing about 30,000 bushels of fruit and vegetables each season. The principal improvements in this department have been the building of one new greenhouse, 28 by 100 feet, the grading and leveling of new ground, the laying of new pipes for irrigation, and the purchase and use of a large amount of manure and other fertilizers.

Some of the farm land lays at a distance of one and a half mile from the farm buildings. To furnish a route to haul farm products

over and to make the cemetery, which is situated in this part of the farm, accessible at all seasons of the year, a stone and cinder road over one mile in length has been constructed. Part of this land was too wet for the best results in cultivation; this has been improved by laying 400 rods of drain tile.

On account of the necessity of using all available stock manure on our extensive vegetable gardens a rotation of crops has been adopted, seeding to grass and clover to keep up the fertility of the farm lands. This has been supplemented during the past year by the purchase of considerable stock yards manure, which we have found to be profitable.

The results from the farm and garden operations have been particularly gratifying in the past two years, the details of which were gone into more at length in the last report. In these occupations nearly 100 patients have found healthful and profitable employment. Our grounds have been beautified on a scale never before attempted. The wards have been kept constantly supplied with plants and cut flowers, and flower shows have been held each fall, which have been of much interest to the patients, as well as to attract many visitors from the vicinity.

In conclusion, I would say I am under many obligations to the heads of the different departments, to my medical staff especially and supervisors, in regard to the care of patients. They have discharged their duties faithfully.

Your most obedient servant,

J. C. CORBUS.

REPORT OF THE TRUSTEES.

HOSPITAL, ILL., July 1, 1904.

To the HONORABLE RICHARD YATES, *Governor of the State of Illinois:*

SIR—We beg leave to submit herewith the fourteenth biennial report of the trustees of the Illinois Eastern Hospital for the Insane; also report of the superintendent showing the condition of the hospital, improvements inaugurated since the last biennial report, also detailed report of the treasurer showing total receipts and disbursements during same period.

Since our last report the Hon. William E. Murphy of Douglas county, resigned as trustee of this hospital and the vacancy occasioned thereby was filled by the appointment of Hon. P. Whalen of Ford county.

During the past two years a number of improvements in the care of the patients of the hospital have been inaugurated. On the north infirmary a large amount of screened porches have been added to aid in caring for the consumptive patients, and a number of other porches screened in to give out door air and exercise to the more violent wards, and much thought and attention has been given to the rearrangement of wards to insure the comfort and health of the patients. We believe the hospital staff have been conscientious in the discharge of their duties and have given all the aid and relief possible to the patients under their care which scientific treatment or medical research could suggest.

It has been our constant aim to insure kind and considerate treatment of the unfortunates entrusted to our care, insisting that no effort be spared on the part of our nurses and attendants for the attainment of this object.

The price of labor has gradually advanced during the last biennial period, and in order to meet this advance and retain competent help in the different departments of the institution, we have been compelled to advance the rate of monthly salaries of nearly all employés except the higher officials.

With attendants and nurses this raise has amounted to over 5½ per cent in the rate of wages, aggregating an increase of over $600.00 per month in wages paid. The hospital continues to lose many of its best graduated nurses from the training school to private hospitals and other public institutions and a still further advance will be necessary in the wages of graduated nurses, especially those in charge of wards and other responsible positions. The wages now paid male nurses and attendants average $29.30 per month with board, room and

laundry, beginning at $25.00 per month for inexperienced help, and female nurses and attendants receive an average of $21.45 per month with board, room and laundry, beginning with $18.00 per month for inexperienced help. This leaves too narrow a margin for advance and is the cause of our losing many of the more progressive and ambitious nurses. Most of the employés of the institution are from the farm and small towns of the district and are, as a rule, bright, intelligent and conscientious, and it would be difficult to find a class of employés from other sources equal in efficiency for the wages paid.

This board has, as far as practicable, endeavored to maintain a merit system among employés, advancing those who give efficient service and dispensing with those who prove themselves incapable or unwilling to render good service.

While we are in full sympathy with any measure calculated to secure better service for the institution we believe the most efficient service will be secured by retaining in the hands of the officials of an institution the hiring and discharge of help on the basis of the value of services rendered, and we point with pride to the standard of excellence and efficiency in all of the departments of the institution.

With a population of about 2,700 people at the present time, this institution is and has been from its beginning, without a regular chaplain. It has been the custom in the past to employ ministers of the different churches in Kankakee to hold services at the chapel of the institution, but your board of trustees are strongly of the opinion that the religious influence of a resident chaplain by being in closer touch and coming in daily contact with the employés and patients of the institution would result in much moral benefit to its inhabitants.

We believe the employment of a lady physician of wide practical experience and mature age would result in much benefit to the female wards of the institution, and while we realize the difficulty of finding one possessed with all these necessary qualifications, we believe that such a person should be secured as soon as possible.

We have made a special effort, and with considerable success, to introduce and adopt new systems of economy into some of the different departments where such would not interfere with or impair the treatment, services rendered, quality and quantity of food and necessaries furnished the inmates, and it is with special pride we point to the economical administration of the institution's affairs during the last biennial period, our surplus being on the date of this report $55,761.41.

For the various needs of the hospital for the coming biennial period we respectfully refer you to the superintendent's report, all of which we endorse, and more especially that part of it which bears on our present water supply. The quality of water furnished to meet the requirements of the institution continues very bad and has caused considerable complaint from the inmates and employés.

Respectfully submitted,

LEN SMALL,
ALMET POWELL,
P. WHALEN,
Trustees.

SUPERINTENDENT'S REPORT.

To the Honorable Board of Trustees, Hospital, Illinois.

GENTLEMEN—In compliance with the law, I herewith submit for your consideration the 14th biennial report of the institution beginning July 1, 1902, and ending July 1, 1904. The number of patients in the hospital, July 1, 1902, was 2,177. The following table shows the movement of the population of the hospital for the past two years:

NUMBER OF PATIENTS IN THE HOSPITAL.

	Men.	Women.	Total.
July 1, 1902	1,101	1,076	2,177
Admitted during the two years ending June 30, 1904	521	452	973
	1,622	1,528	3,150
Discharged	221	278	499
Died	186	115	301
	407	393	800
Percentage of deaths for the two years			7.1
Remaining June 30, 1904	1,140	1,096	2,235
Daily average number present during the two years	1,104	1,063.17	2,167.17

The mortality for the past two years is 7.1 per cent, the same that it was the previous two years. This is extremely low and indicates plainly the excellent care we are giving the unfortunate inmates under our care. We have had but few causalties during the past two years, and about seven cases of sudden death. In each instance the matter was thoroughly investigated and a coroner's inquest demanded. No blame has been attached to the management in any instance.

Many of the patients, possibly an increased number, that have been brought to the hospital have been in a feeble condition. They have been immediately placed in the hospital ward where they received special care and special diet.

The medical department continues to be very satisfactory. The same physicians that were here two years ago are with us at this time. They are faithful in the discharge of their duties and their efficiency cannot be excelled. The medical library is still increasing, having at this time 1213 volumes, and contains most of the modern works pertaining to medical science. The staff holds its daily meeting in the library room, where a report is made by each member as to the con-

dition of the patients on the ward to which he is assigned. The medical library is used as a reading room by the staff and highly appreciated by them.

The pathological department has been in charge of Dr. C. F. Shronts as pathologist. His duties has been well discharged as the following report by Dr. Shronts will indicate:

THE PATHOLOGICAL DEPARTMENT.

The work in the pathological labratory has been continued, as in the previous two years, by clinical pathology for the instruction of the medical staff, for the nurses of the training school, as well as for the performances of autopses and clinical microscopy. Much valuable work in this department has been done, as it must be borne in mind that insanity is not merely an intellectual disorder but a disease affecting the whole being.

A study should be made of the morbid elements causing partial disturbances, as well as when the toxines acting directly upon the nerve cells are the exciting causes. In those cases having structural weaknesses of the nervous system temporary improvements have been observed as the result of the correction of the disordered products of the secretory glands or diminished elimination of the secretions, thereby lessening the acuteness of the symptoms, even though a permanent cure cannot be expected. The paroles of those having inherited predispositions to insanity may be established, thus allowing the patients to remain active and more or less useful members of society.

A demented patient suffering from exudative pulmonary tuberculosis may contaminate many other patients, in spite of ordinary cleanliness, if permitted to mingle with them. Expectorating on the floor, clothes, etc., and the sputum drying may be the source of the dreaded disease among others. In incipient tuberculosis the physical signs may be so meager as not to warrant one in carrying out isolation, and yet all this time others may be exposed to the tubercular excretions. The collection of the sputum of many patients, having few physical signs of the disease, having been carried to the laboratory, properly stained and examined with the microscope, has revealed the fact that danger lurks in the vicinity of such patients. In 100 specimens of sputum examined in suspected cases, it was found that 20 of these contained tubercle bacilli, and isolation was at once required. Then again from these sputum analyses micro-organisms of pneumonia, influenza, and diphtheria were detected which enlightened us as to the proper treatment of these diseases.

Non-excreted toxines give rise to a number of nervous phenomenae referable to the brain, such as uraemic convulsions and coma; these may, at times, be difficult to distinguish from epilepsy and apoplexy, a urinalysis is some times the only means of differentiating between them. The chief pathological elements to be sought for in the urine are sugar and albumen. In the examination of 500 consecutive specimens of urine, voided from patients admitted to the infirmary, as well as those admitted to the asylum, there were found 159 cases of

albumen and nine cases of sugar in varying quantities; aside from these chemical tests the microscopical findings were not without interest; and other facts of scientific import, such as disordered digestion, deficient oxidation, etc., would be superfluous to publish.

Widal's test has assisted us in deciding several cases of typhoid from auto-intoxication fever. Blood examinations for the malarial germ have given positive evidence of intermittent fever, in a few instances, before the characteristical clinical symptoms had developed. Many blood counts have been conducted, but owing to the time they take and the careful technique required, have been of little value except for diagnostic purposes.

During the past two years there has been about 40 autopsies performed. Since we have been unable to gain permission to make post-mortems from many of the friends and relatives, our number has been thus restricted and some of the most interesting and obscure cases have gone unposted.

In Germany post-mortems are held on the bodies of all persons dying in public institutions; it would be well if such an understanding existed among the charitable institutions of this country. Knowledge gained from autopsies is valuable in many ways, not only to confirm the cause of death, to instruct the physicians and nurses, but to further the study of cellular elements; small sections of tissue, carried through the process of dehydration and staining, may be of inestimable value in the study of diseases. A fairly complete record of 30 cases has been put on file; ten of these were female patients, the oldest of which was 80 years and the youngest 48 years; of the 20 males the oldest was 70 and the youngest 24 years. In four of these cases it was shown that tuberculosis was one of the principal causes of death; six other patients dying from other diseases were found to have had tubercular infection. Many other interesting facts were derived from the records, but from these few data it was demonstrated that women survive longer than men, and are less prone to degenerate troubles, and the tubercular processes become more frequent as life advances.

In 1893 the laboratory department was equipped with enough instruments "for a start." Since then no instruments of any value have been procured except a small microtome and a Fleischl's Haemoglobinometer, which have taken the places of worn out ones. We have with us, a portion of the time, as assistant, Mr. O. B. Edmonson, a two-third year medical student, who is thoroughly competent for the position. Previous to this our assistants have not had sufficient training for the work required. What the department needs is a larger and better supply of instruments, more time allowed to the pathologist and a permanent assistant. It is hoped that from now on the department will receive liberal appropriations.

ATTENDANTS AND NURSES.

The Training School for Nurses, under the supervision of Dr. S. A. Graham, chief of medical staff, has done excellent work. The graduates have been sought after by the hospitals throughout the

country and have been commended for their efficiency. So great is the desire of young ladies throughout the country to become members of our class, we have had to restrict the number and raise the grade of admittance. Our nurses and attendants generally have given efficient service under the special supervision of our supervisors and their capable assistants. There has been but little friction and the general deportment of all under their supervision has been good.

www.libtool.com.cn

AMUSEMENTS.

Every effort is made to provide amusement for the inmates of the hospital. Our commodious amusement hall and chapel have enabled us to give entertainments that are heartily enjoyed by our patients and employés. Our orchestra and band furnishes music of high order, surpassed by few in our State. We have chapel services each Sunday, the ministers of the city of Kankakee alternating in their services here. Tuesday and Friday evenings of each week are set apart for amusements, which consist of dances or entertainments. This in connection with occasional boat excursions on the river go far to break the monotony and contribute largely to the improvement of the mental condition of the patients.

During the past two years many substantial improvements have been added:

FARM WARD

A farm ward has been built with a capacity of about sixty beds, providing a suitable home for a class of male patients who labor regularly as teamsters and farm and garden help. This is a beautiful two-story cottage, done in Bedford stone, laid Random Ashler style and finished in oak throughout, and located, as it is, in a setting of green lawn and surrounded by trees, shrubbery and flower beds, with a back ground of gardens, green houses, poultry yards and farm buildings, giving it an inviting and home-like appearance.

CEMENT WALKS AND MACADAMIZED STREETS.

The policy previously inaugurated of adding cement walks each year has been continued and many pieces of much needed walks have been added to the system. About five blocks of street have been macadamized and drained with cement curbs, but there are several streets that still need improving. Over four hundred feet of stone tunnels for steam pipes have been rebuilt and covered with cement walks.

ENGINEER'S DEPARTMENT.

Two 200 horse power water tube boilers have been added to our main battery of boilers for heat and power. The steam mains, steam returns and hot water pipes in over 800 feet of tunnels have been replaced by new pipe. Five buildings have been repiped and changed from hot water to steam, leaving only one building still heated by the old hot water system formerly in use here. A new hot water service

tank has been added to the boiler room and all steam pipes in boiler room renewed. In the laundry three of the centrifugal wringers have been replaced by new modern machines. Much of the plumbing, soil pipes, etc., have been in use for many years and require much attention. A large amount of this work will have to be replaced within the next two years.

Our light and power plant consists of two engines, one of 175 H. P. and the other of 230 H. P., direct connected to dynamos of 100 K. W. and 150 K. W. The smaller of these engines and dynamos is usually used in the day time to generate power for machinery and the larger for lighting at night. These machines are now somewhat overtaxed for power, especially the largest one for night lighting. It was the original intention to have both machines large enough so they could take the place of each other in case of repairs, but we now find that our smaller machine is very inadequate for night lighting and we have found ourselves in a very serious position on several occasions when repairs were obliged to be made on the large engine and dynamo.

There are about 2500 16 C. P. incandescent lights and 19 1000 C. P. arc lights used in the hospital, in addition to 70 H. P. necessary for the ice machines, which are run at night. And to insure safety to the institution we will need an additional engine of 350 H. P. directly connected with dynamo of 250 K. W. power. This engine and dynamo will cost about $7,500.00.

CHIMNEYS AND FLUES.

When the buildings of this institution were constructed each cottage and the different wards had a separate heating system necessitating numerous chimneys, also each building was provided with from eight to 25 stacks for the purpose of ventilation, making a total of 500 brick stacks and chimneys on the buildings of the institution. This brick has now been exposed to the weather from 12 to 24 years and many of the stacks are showing the effect of the weather and demand immediate attention. Ten or more of these chimneys have been recently removed or replaced and many more will need attention the coming summer.

GARDENING

A distinctive advance has been made in the gardens of the institution during the past two years, bringing the production of vegetables up to over 40,000 bushels per annum, and of small fruits 2,500 bushels per annum. We are now selling an amount of garden products nearly equal to the amount of the products purchased by the hospital, thus making the hospital produce equivalent to all of fruit and vegetables consumed by the institution.

SUPPLY DEPARTMENT.

The food supply is an important item of the hospital's existence and it has had a careful and painstaking supervision. There has

been, and ever will be, to contend with the elasticity in markets and a vexatious variation in the standard of quality on the market at different seasons of the year, and crop conditions are also to contend with. Quality has always been considered in purchasing, and I am prepared to say that our food supply has surpassed that of any like institution in the State, and yet the expense of the food supply is much less than one-third of the ordinary expense of the hospital.

In the item of bedding the quality has been improved in that stronger and better grades of sheeting, etc., have been purchased with a view to economy, as the cheaper grades will not withstand the wear of the laundry. I think on the whole, in the matter of household supplies in general, the wards have been generously and judiciously furnished with everything needed for comfort and cleanliness.

The system of accounting for clothing is the same as was in force two years ago, with the possible exception of a few minor corrections in charging incidentals. This incidental expense is, and always will be perhaps, the greatest source of annoying correspondence. Every effort is made to reduce the friction, all correspondence is given courteous attention, yet time and again the most trivial item will become a vexing problem for adjustment. All in all, the supplies and the system of handling them are giving good satisfaction.

I would recommend, however, the building of a vermin-proof flour room immediately adjoining the bakery, with a capacity of from eight to ten car loads. Our present flour room is on the third floor of the store building, making it necessary to handle the flour five times for delivery to the bakery, causing an appreciable shrinkage. Besides, the present room has a capacity of but five weeks' supply at most. This congested condition has many times compelled the hospital to buy on the rising market—a most unsatisfactory result. In the face of such spasmodic advances in flour as we have experienced during the past year, the cost of the building could be saved in one eight car lot.

Owing to the lack of room in what was intended as the administration building, the business offices of the institution are more than a block and a half apart, making it very inconvenient, especially in winter time, to transact the business of the institution. The archives of the institution which have been accumulating ever since it was established are stored in the tower of the administration building, which is packed full, with no order for want of space, and in a dangerous locality in case of fire. Many of these are of great value as the settlement of estates would be involved I want to destroy the useless material and tabulate what should be preserved. I would combine this building with the offices, and it should be absolutely fireproof. The estimated cost would be about $25,000.00.

We have deemed it advisable, owing to the increased number of cases of tuberculosis, to recommend the erection of a tubercular ward to accommodate 100 patients. By the erection of this ward all suspected cases and those known to be infected could be isolated, making the freedom from infection more secure. This cannot be done under the existing conditions, although on our infirmary we have provided rooms and screened large porches for the tubercular

cases, but the provision is inadequate. I am satisfied that in a large hospital like this one a building should be erected for the special care of this class of patients. The cost of such a building would not be less than $50,000.00.

www.hanwei.com.cn

The male quarters of the hospital, providing room for employés, is not sufficiently large and we have to resort to every expedient to find room. This should be increased to accommodate at least 25 more people than we have room for now. The estimated cost would be about $6,000.00. We had the honor of a visit from the State Board of Charities who conceded to this recommendation.

The coach barn is a frame structure and has been in service for many years. It is filled with combustible matter and we are in constant danger of fire. We need a new barn made of stone and every precaution taken in the construction to guard against accidents. The cost of such a structure would be about $4,000.00.

WATER SUPPLY.

One of the greatest needs of the hospital at the present time is better water. Our pumping plant consists at present of two duplex and compound steam pumps of a nominal daily capacity of 2,000,000 gallons each, but capable of being increased to 2,500,000 without injury. The power is furnished by two water tube boilers, one of 200 and one of 250 horse power, with which we also heat the central building and the main wing wards, north and south. The hospital is supplied with water by a circuit of ten inch water mains, with branches of six inch and four inch, with 74 fire hydrants attached, and a circuit of six inch and four inch mains, to which the domestic service pipes to all the buildings are attached. In general use both services are carried on the tower, which gives a pressure of 43 pounds, but in case of fire the engineer in charge at the pumping station can cut out the tower service by closing one valve and pumping directly into the ten inch mains, thus relieving the plumbing in the buildings from the extra strain of a fire pressure.

The source of our water supply is the Kankakee river, which, during several months of the year becomes so roily that it is unfit for use for laundry, bathing, cooking, drinking and boiler purposes. To overcome this difficulty, several methods have been resorted to in the past. Among others an infilteration tunnel was constructed some 17 or 18 years ago, which proved a failure. About seven years ago settling basins were built, which have not bettered the situation much, and the water is now worse than at any time in the past on account of the drainage ditches that have been dug in the Indiana marshes on the river above here. A short time ago, the water company operating in the city of Kankakee, put in a mechanical filter with a capacity of 4,000,000 gallons per day of 24 hours, at a cost of about $35,000.00. This filter system, after a test, during a time when the Kankakee river water has been at its worst, has proven an entire success. The nominal consumption of water at the hospital is about 1,400,000 gallons per 24 hours. This is increased during the lawn sprinkling and irrigating time to about 2,500,000 gallons. We have

estimated that a mechanical filter of similar construction to the one in use for the city, could be built with sufficient capacity for the uses of the hospital for about $25,000.00. We, therefore, ask for an appropriation of that sum for the construction of filters. We asked for this two years ago and find the necessity of the filter system just as essential now as it was at that time.

In conclusion, I would say I am under many obligations to the heads of the different departments, to my medical staff especially and supervisors, who have been faithful in the discharge of their duties

Your most obedient servant,

J C. CORBUS,

TREASURER'S REPORT.

C. R. Miller, treasurer, in account with the Illinois Eastern Hospital, for the year ending June 30, 1903.

ORDINARY EXPENSE FUND.

Dr.

1902				
July	1	To balance on hand	$18,899 57	
July	31	amount from State Treasurer	80,500 00	
Nov.	1	amount from State Treasurer	80,500 00	
1903				
Jan.	20	amount from State Treasurer	80,500 00	
April	21	amount from State Treasurer	80,500 00	
June	30	sundry deposits by superintendent	2,726 26	
June	30	sundry deposits by counties and individuals	12,550 74	
June	30	sundry deposits by others	402 11	

Cr.

1903				
June	30	By superintendent's checks paid		$328,194 77
June	30	balance		28,383 91
			$356,578 68	$356,578 68
July	1	To balance	$28,383 91	

FIRE ESCAPE AND FIRE DEPARTMENT FUND.

Dr.

1902				
July	17	To amount from State Treasurer	$104 00	
Aug.	14	amount from State Treasurer	100 00	
Nov.	1	amount from State Treasurer	205 40	
Dec.	4	amount from State Treasurer	119 00	
Dec.	30	amount from State Treasurer	140 00	
1903				
Jan.	19	amount from State Treasurer	685 00	
Mar.	17	amount from State Treasurer	140 00	
Apr.	21	amount from State Treasurer	796 00	
Jan.	6	amount from State Treasurer	252 50	

Cr.

1903				
June	30	By superintendent's checks paid		$2,529 40
June	30	balance		12 50
			$2,541 90	$2,541 90
July	1	To balance	$12 50	

Treasurer's Report—Continued.

FURNISHING NEW CHAPEL FUND.

Dr.

1902				
July	17	To amount from State Treasurer	$ 9 09	
Aug.	14	amount from State Treasurer	9 12	
Dec.	4	amount from State Treasurer	8 64	
1903				
Mar.	17	amount from State Treasurer	188 17	
Apr.	21	amount from State Treasurer	32 40	
		Cr.		
1903				
June	30	By superintendent's checks paid		$247 42
July	1	To balance	$247 42	$247 42

FURNITURE FUND.

Dr.

1902				
Aug.	14	To amount from State Treasurer	705 26	
Nov.	1	amount from State Treasurer	265 44	
Dec.	4	amount from State Treasurer	214 94	
Dec.	30	amount from State Treasurer	978 95	
1903				
Jan.	19	amount from State Treasurer	335 41	
		Cr.		
1903				
June	30	By superintendent's checks paid		2,500 00
			$2,500 00	$2,500 00

GARDENING FUND.

Dr.

1902				
Aug.	14	To amount from State Treasurer	$399 30	
Nov.	1	amount from State Treasurer	535 05	
Dec.	4	amount from State Treasurer	237 60	
Dec.	30	amount from State Treasurer	243 35	
1903				
Jan.	19	amount from State Treasurer	248 75	
Mar.	17	amount from State Treasurer	285 95	
		Cr.		
1903				
June	30	By superintendent's checks paid		$2,000 00
			$2,000 00	$2,000 00

Treasurer's Report—Continued.

Dr. J. C. Corbus, Superintendent I. E. H. I.

DEAR SIR—I beg leave to submit to you a report of the supply department.

That frugality does contribute to generosity is surely evidenced by the conditions prevailing during the two years ended June 30, 1904; such conditions being that tended to advanced prices of all supplies used in the institution, on the one hand; and the comparatively improved condition in which the Illinois Eastern Hospital is found today, on the other, together with the improved quality of the food supply in the face of the advanced prices. Only a knowledge of institutional work gained by practical experience has enabled the management to bring about these results—a constant and direct association with every condition of hospital life is the process by which one is fitted for frugality in hospital work, and generosity to the wards of the State follows as a natural consequence.

I am unable to comply with the annual report forms furnished by the State Board of Charities, in that their system of institutional bookkeeping has not been adopted by the Illinois Eastern Hospital. Their system would lend to the position of storekeeper an importance out of proportion to the clerical force at present at his command, and out of proportion to his source of information. As for instance (see blank attached). receipts from farm and garden are not within his province; he receives no cash from any source; accounts due and unpaid are of the chief clerk's record, as are also the quarterly receipts of supplies a record of the chief clerk's quarterly report. The requisitions turned over by me each month to the stock clerk show the disposition of supplies, and these requisitions are held by the stock clerk as his check against the storekeeper.

This system was inaugurated here when you assumed the superintendency, to simplify the complicated and confusing system in practice at that time. It has been, and is, accurate and practical, arriving at facts by the shortest route, and saves to the institution the expense of at least two clerks.

With the information at my command, however, I submit an itemized inventory of supplies on hand in this department July 1, 1904.

Very respectfully.

GEO. R. DEATRICH,
Storekeeper.

www.libtool.com.cn

INVENTORY TAKEN AT STORE HOUSE JUNE 30, 1904.

1000 pounds Neutral soap at 4½ cents	$ 45 00

REPORT OF TRUSTEES.

HOSPITAL, ILL., Dec. 4, 1906.

Hon. Charles S. Deneen, Governor State of Illinois, Springfield, Ill.:

SIR—While this report is of date as indicated, the statements and statistics furnished herewith are of date July 1, 1906, and they cover a period of two years.

In furnishing the statements and statistics, we are following what appears to be the established practice, but with no confidence that they will be of any general interest because of the immensity of the detail, and the obvious impossibility of drawing any valuable conclusion therefrom.

The lack of uniformity in statistical reports of the kind by insane hospitals defeats any attempt at any intelligent comparison in results. A form of report common to all insane hospitals would be of greatest value.

The present Board of Trustees was organized in February last, when Messrs. A. M. Jones and B. E. Sunny were appointed by you to succeed Messrs. Almet Powell and Patrick Whalen, whose terms had expired. Mr. C. E. Robinson, who had served on the board for several years, continued with the new members.

Besides the regular monthly meetings, the board has given much time to the affairs of the hospital, and it fully realizes that the problem of organization and operation will demand all of the time that the trustees can devote.

There are few hospitals for the insane so large as the Eastern Hospital. There are three larger hospitals in the east, but there are none in the west approaching the Eastern Hospital with reference to the number of patients.

The Eastern Hospital occupies some 1200 acres; has 56 buildings; cares for about 2,400 patients; has 450 employés; spends about $450,000.00 per annum; and represents an investment by the State of over $2,000,000.00.

Because of its immense proportions, its large organization, the number of patients, representing, as they do, all the variations and types of the malady which the hospital was designed to treat, the Eastern Hospital should occupy and maintain an advanced position in the care and treatment of the insane. It is not enough that it shall average in results with hospitals having smaller plants and fewer patients. It

must do much more than this. It must, in its organization and operation, represent the very highest attainable in the work of caring for the afflicted people entrusted to its care, and it must, from the perfection and thoroughness of its work, be the repository of the most complete knowledge on the treatment of the insane. Anything short of this cannot be satisfactory to yourself, to the citizens of your State, or to your trustees.

The objects of the State in providing hospitals for the insane is obviously to cure insanity, and to return the patient to his usual avocation as quickly as it can be done.

It is well understood, of course, that there are a large number of patients in all of the hospitals who are incurably insane and beyond all human help. All that any hospital can offer these people is comfortable shelter, wholesome food, and humane care. It is the patients that are susceptible of cure who call for our immediate and painstaking attention.

The statistics supplied by the hospitals located in various parts of the country indicate that the number of patients that are cured is quite uniformly 5 per cent, nor has the percentage increased with the rapidity that might be hoped for. Over a long period of years the gain seems to have been silght. Indeed, so many patients are taken into the State hospitals, and so few are sent away cured that they might be more properly called State *Homes* for the Insane, rather than State *hospitals.*

One defense of the hospital officials generally to the poor showing in the number of cures effected is that the patients are withheld from the hospitals until the malady has become fixed and it is not until the family is no longer able to control the afflicted member, that he is sent to the hospital. This is a perfectly natural condition, and the reluctance in consigning anyone to an insane hospital is universal, but it is the greatest possible injury to a patient not to send him to a modern, well equipped hospital at the inception of a mental disorder. It is not over stating the case to say that twenty per cent of the patients who are now chronic insane and who will spend the balance of their lives in the State hospitals might have been cured in from three to six months if they had been sent to the hospital when their trouble first manifested itself.

An examination of the figures in the biennial reports of the Eastern Hospital covering a period from 1899 to 1906 inclusive, indicates that it has not only not shown as large per cent of patients cured as in the other State hospitals, but on the other hand, the last four years of its operation does not show as well as the previous four years. The number of patients who "recovered" in 1899, 1900, 1901 and 1902, was 295, while for 1903, 1904, 1905 and 1906, there were only 97. The table giving the number of patients, recoveries and improvements is submitted herewith:

www.libtool.com.cn

	No. Patients.	Recovered.	Much Improved.	Improved.
1899	2,134	82	56	112
1900	2,152	76	32	128
1901	2,143	80	8	122
1902	2,122	57	13	135
1903	2,143	31	27	144
1904	2,122	16	20	133
1905	2,346	21	6	140
1906	2,392	29	5	170

Your Trustees have given this vital phase of the situation thorough and continuous investigation and study, and find that among the things that have contributed to the poor showing at the Eastern Hospital in the matter of recoveries, are the lack of modern appliance for the treatment of the insane; over-crowding; bad ventilation; indifferent food and bad water.

Perhaps nothing has aided in the cure of insane patients in other hospitals so much as the hydrotherapeutic rooms which have been added in practically all hospitals during the past five years. These rooms are equipped with baths of various kinds. This method of treatment is highly advantageous in all cases, but is especially beneficial with the noisy and disturbed classes of patients, who are often rendered quiet and enabled to sleep after the treatment.

All of the first class hospitals throughout the country are equipped with facilities of the kind, but the Eastern Hospital is lamentably deficient in this respect. Aside from a few crude appliances, it has nothing and must depend on drugs to quiet the patients, the result of which treatment usually is to aggravate their condition.

The addition of the hydrotherapeutic room for both men and women is so imperatively necessary that your trustees have decided to go as far as their limited means will permit in making this addition without waiting for a special appropriation. They have contracted for a hydrotherapeutic equipment for the women's department at an expense of $2,500.00, and the installation will be made forthwith.

A similar equipment for the men's side should be added without delay.

The present buildings were erected between the years of 1878 and 1885; many of them are lacking in proper plumbing and ventilation, and some of them are actually unsanitary.

None of them have less than their quota of patients, while more than half of them are crowded to an extent that is almost inhuman.

The practice in insane hospitals is to allow 30 square feet to each patient in day rooms, 60 square feet in sleeping rooms, and 90 square feet in infirmaries.

On this basis, we have in the Eastern Hospital, room for 964 men in the sleeping rooms, while we are actually caring for 1,201.

On the women's side, we have sleeping room for 896, while we are caring for 1,188. The worst condition is in the infirmaries, where we have room for 27 men, and are caring for 95, and room for 52 women and are caring for 78. These conditions are, of course, more difficult to contend against in the winter than in the summer.

In addition to keeping the buildings closed in the winter, so that the ventilation is seriously impaired, there has been the greatest difficulty in keeping anything like uniform temperature because of the condition of the window framing and sash, after some thirty years of exposure to the weather.

In some of the buildings, in severe weather, the temperature on the west and north sides is from 30 to 40 degrees below the temperature on the east and south sides, and in many cases patients have had to be removed entirely from the north and west sides of the buildings until the weather moderated.

Double windows have been asked for on several occasions before now, but the necessary appropriation to supply them has not been forthcoming. Because the situation is so urgent, the trustees have bought 800 double windows out of the ordinary fund and are equipping the cottages which are most exposed, and are farthest away from the steam plant. There are 1,200 additional required to equip the remaining buildings.

With every building not only constantly in use, but in use beyond its capacity, for the last twenty or more years, there has been little or no opportunity to renovate or reconstruct.

The annual housecleaning, in many of the cottages at least, has consisted of hastily putting a fresh coat of calcimine on the walls and ceilings without having first removed either the dirt or the old calcimine, so that in some of the buildings, the walls and ceilings have numerous layers of dirt, the accumulation of years.

From daily scrubbings, the floors, and the timbers beneath have become soaked with soapy water, and in many cases give out a disagreeable odor.

The only remedy for this situation is to add two new buildings, each with a capacity of 200, one for the men's side and one for the women's side. These buildings, fire proof and equipped with all modern appliances for the care of the insane, should be erected forthwith, and as soon as they are ready for occupancy two of the old cottages should be vacated and should be turned over to a reconstruction force to be thoroughly renovated and equipped with modern plumbing, ventilation, etc., etc. This process should be continued over a series of years until all of the buildings are made sanitary and brought up to date.

The cost of these buildings ready for occupancy will be approximately $140,000.

The problem of feeding so many people has received very careful attention. The difficulties will be more fully appreciated when it is explained that because of the fact that there are so many buildings and they are so far apart, there are eight kitchens and that food is served to patients in twenty-nine different places, and twenty-six different places where nurses have dining rooms, and three places where other employés take their meals.

Notwithstanding most of the buildings are connected by underground passages, through which the food is transmitted, the impossibility of keeping food hot in the winter time is obvious.

In addition to this, the present arrangement leads to great waste. The plans which are now under way will lead to great improvement in that the number of dining rooms will be materially reduced, which will permit of the food being served in better condition than heretofore.

The water supply has been referred to in almost every biennial report during the past twenty years. The water comes from the Kankakee river, and it is generally very muddy, and it is never clean. It is used in the hospital for all purposes except for drinking. The drinking water is made from artificial ice manufactured in the hospital. Notwithstanding the greatest care, patients have frequently used the Kankakee river water for drinking purposes, and there have been quite a few cases of typhoid fever each season.

The city of Kankakee, also using the Kankakee river water, some years ago installed a filter, which makes the water clean, safe and palatable. We urgently require a filtering system for the hospital, which will cost about $15,000.

There are 1,400 wooden beds which have been in service for more than fifteen years and which no amount of cleaning with strong preparations will make clean and free from vermin. These beds are provided with straw mattresses—long since abandoned by the hospitals. New iron beds with their mattresses will cost approximately $19,500.

All of the above has immediate and direct bearing on the care and treatment of patients. With the defects in the present situation remedied in the manner indicated, there is no reason why the showing of the Eastern Hospital should not rank with that of any similar institution.

Besides the above changes and additions, there are many others that are required in the interests of higher efficiency and economic management.

The hospital has three steam plants, the main power house having eight boilers, the pumping plant having two boilers and the plant at the dairy having two boilers.

The bill for coal amounts to about $52,000 per annum, and is greater per capita than any other institution in the State.

The whole plant is in bad condition and requires reorganization. The pumping plant should be done away with and the pumps should be operated from the main plant by electric motors. The hand-fed boilers in the main plant should give way to automatic stokers, in the interest of higher efficiency and economy. The equipment of automatic stokers will cost about $9,000.00 and will make a saving in fuel that will pay for itself in two years.

There are two engines and dynamos, one or the other of which has been broken down a considerable portion of the time during the past seven or eight months. We have been at a point many times where we had to rely on one dynamo and when it looked as though the entire group of buildings would be in darkness. The situation in this regard is unsafe and an additional engine and dynamo, costing approximately $10,000, should be supplied.

The hospital owns something more than 100 cows and produces milk to the value of about $10,000 per annum. In addition, it buys milk from the neighboring farmers costing about $9,000.00 per annum. It has the necessary barn capacity, pasture land and other facilities, including help, to take care of from thirty to fifty additional cows, which would enable the hospital to produce all of the milk it requires. The cost of the additional cows will be about $4,000.00, and an appropriation in that sum is required.

The hospital has a warehouse in which is kept meat, flour, clothing, and the other necessary items of merchandise in general consumption. This warehouse is entirely too small for the purpose, so that the merchandise stock cannot be kept in any kind of order, and because of the lack of storage capacity, it is found that merchandise is scattered through many of the buildings outside of the warehouse. The value of the merchandise handled through the year is $150,000 and there is a severe loss each year through waste, petty thefts, etc., growing out of the lack of proper warehouse accommodations. An addition to the present building, costing $10,000, is urgently necessary.

Arrangements for the establishment of a State Psychopathic Institute under the suprvision of a competent psycho-pathologist have practically been completed. This institute, while it will be located at Kankakee, is the result of a joint effort on the part of the State Board of Charities and the superintendents of all of the Hospitals for the Insane and of the Institution for Feeble Minded Youth of the State. Its function will be to outline and give special instruction to the physicians connected with all of the State institutions as to methods of examination, the analysis and criticism of deductions, the preparation of uniform case histories, the making of diagnoses and the conducting of autopsies.

It will provide a special training in mental diseases for the medical staffs of the State institutions which is not obtainable in medical colleges or in general hospital training.

It is hoped to have this institute organized and in effective operation out of funds provided by this hospital before Feb. 1, 1907. Its perpetuity will depend upon an appropriation by the coming session of the Legislature.

The institution of this work in Illinois will put the State abreast of the most modern conceptions of institution management.

It is thought that $30,000 will be required to provide room, instruments, salaries and other maintenance expenses for this institute for the coming biennium.

Soon after the present board was organized, Dr. J. C. Corbus, who for eight years had been superintendent of the hospital, and who had reached the age of 75 years, indicated his willingness to retire, and the board set about finding a successor. It was not until July, however, that the services of the present superintendent, Dr. J. L. Greene, were secured.

Dr. Greene for many years had been superintendent of the State Hospital at Lincoln, Neb. He is a skilled alienist and a man of large administrative experience and ability. Dr. Greene has taken up the

important work before him with a vigor and a keen interest which is full of promise of successful results.

www.tiptool.com.cn

The trustees have secured the services of a skilled dietetian, in whose hands has been placed the matter of food for the entire hospital.

A new chief engineer has been secured and has been put in charge of the large steam plant required to serve the hospital.

While the personnel of the hospital employés has received almost continuous attention and many changes have been made, the trustees are glad to testify to the efficiency, faithfulness and interest in their work of so many men and women employés of the hospital, who have done all in their power for the welfare of the afflicted people entrusted to them.

While we have retained many of the old and experienced employés, the changes through resignations, discharges, etc., have been very great, over 190 new employés having been taken on through the Civil Service during the six months to Sept. 1, to fill vacancies. The changes are at the rate of 380 a year, while there are only 450 employés in all. The greatest number of changes is in the list of attendants—men and women—because of the low compensation, which averages $30.00 per month and board for the men, and $20.00 per month and board for the women.

The State Civil Service Commission has given the Eastern Hospital every possible assistance and the trustees are indebted to it for many employés who are giving satisfaction.

The Eastern Hospital suffered from a heavy fire of criticism in May, when one of its young women patients gave birth to a child. The trustees were not notified by the then superintendent until four days after the occurrence. They immediately met at Kankakee and held an investigation lasting through one evening and all the next day. They took the testimony of every one who could throw any possible light on the subject. As a result of their investigations and deliberations, they dismissed from the service of the hospital the physician and head nurse responsible for the welfare and keeping of this young woman.

These dismissals were made, not because the physician or nurse appeared to be to blame for the original happening, but because of their failure to discover the young woman's condition very much earlier than they did. It seemed to the trustees that they were guilty of negligence of a character which possibly led to the original offense.

Later, the case was investigated by the State Board of Charities and the grand jury of Kankakee county without anything additional having been brought out. These investigations led to many suggestions, since adopted, which are intended to prevent any repetition of the offense.

In the summary of the appropriations requested for 1907-1908, and which is given below, all of the items touched upon in the above are included, and besides the special items, we will require the usual appropriation for the ordinary expenses, and our estimate is at $155.00 per annum each (as compared with $150.00 per annum for the year 1905-6) for 2,450 patients. The actual cost per capita for five years, 1901-1906, has been as follows:

1901	$164 90
1902	174 22
1903	151 91
1904	171 90
1905	184 26
1906	163 94

www.libtool.com.cn

The hospital has an income from counties of from $33,000 to $48,000 per annum, which serves to make up the deficit between the appropriation asked for and the actual cost.

Exclusive of outside revenue, referred to, the per capita cost for 1906 was $149.38, while for 1905 it was $164.33.

As is well known there has been a general increase in the cost of all kinds of merchandise and all kinds of food products.. In addition to this we must pay our nurses and attendants more salary. In round numbers there are 225 of them, receiving on an average $25.00 per month (plus their board and lodging, of course), which is not sufficient in these times of high prices for everything. Upon these men and women, after all, falls the direct care of the patients and they must be competent, gentle, humane, patient and untiring. The increase of $5.00 per capita in the appropriation for ordinary expenses will enable us to make a satisfactory readjustment in the salaries of these employés.

The trustees have been able to contract for coal at $1.75 per ton for the year's supply, the lowest price that the institution has ever paid for coal and representing a saving of some $15,000 per annum. This will help to meet the increased expenses in other directions.

While the appropriation for repairs and improvements has been $25,000 per annum, we are in this case asking $30,000 per annum for the reason that $5,000.00 additional per annum is required for the renovation of the cottages as explained in the above.

The appropriation for the improvement of grounds, for live stock and for farm improvements, is the same as during previous years.

Special Appropriations.

Two new buildings to accommodate 200 each	$140,000 00
System for filtering water	15,000 00
Automatic Stokers	9,000 00
Engine and dynamo	10,000 00
1200 double windows	3,000 00
Psychopathic institute and maintenance for two years	30,000 00
Live stock	4,000 00
Hydro-therapeutic equipment	4,000 00
1400 iron beds and mattresses	19,500 00
Warehouse addition	10,000 00
	$244,500 00

PER ANNUM FOR TWO YEARS.

Ordinary expenses	$379,750 00
Repairs and improvements	30,000 00
Improvement of grounds	2,000 00
Live stock and farm implements	3,000 00
	$414,750 00
