Barr's "Gold Medal" Daffodils

AWARDED

Twenty-eight Gold Medals and a Ten Guinea Challenge Cup, Also many First-class Certificates and other high awards.

NEW CLASSIFICATION OF THE DAFFODIL.

For some years past a general want has been felt by Daffodil exhibitors for a wider classification of the Daffodil than the existing one, which has not been found sufficiently elastic to take in several new forms of the Narcissus family raised by hybridists since the great Daffodil Conference of 1884. The Narcissus Committee of the Royal Horticultural Society was approached on the subject, and to meet the case appointed in 1909 a subcommittee to carefully go into the matter, and see how far the existing classification could be modified or altered so as to facilitate the placing of the many new seedlings now being raised. A good deal of time and careful study was given by the members of the subcommittee to the subject, and the revised classification which they brought forward was almost unanimously accepted by the full Narcissus Committee of the Royal Horticultural Society. In the following pages we have adopted to a great extent this classification, which we hope will be of valuable assistance to exhibitors of Daffodils and to amateurs who desire to make a selection of distinct types. As will be seen, 10 distinct divisions have been made together with a section (Div. XI.) at the end to take in a few unclassed species and hybrids. With each division we have given the distinguishing character.

BARR & SONS.

11, 12 & 13 King Street, Covent Garden, London

CULTURE AND ADAPTATION OF THE DAFFODIL OUTDOORS.

Soil and its Treatment.—The Daffodil will thrive in any ordinary garden soil, but prefers a deep, rather moist loam. When the soil is of a dry and sandy nature, it should be deeply dug, if possible at least a season before planting the bulbs, well-deeayed cow manure being added, and a potato or other vegetable or annual crop grown on the ground. Before the bulbs are planted a sprinkling of quick-lime should be spread on the surface and then dug in. If it is not convenient to first take off a crop of Vegetables or Annuals, then, in digging, mix with the soil erushed bones at the rate of 13 oz. to the square yard. The ammoniacal properties of stable manure are injurious to the Daffodil; considerable risk is therefore incurred by using it. On good retentive loamy soils stable manure is not required and should not be used, but a dressing of lime once in every three years, with an annual dressing of Basic Slag, at the rate of 7½ oz. to the square yard, may prove beneficial.

Freshly dug Soil should be allowed to stand vacant two to three weeks before planting, to allow the ground to settle down, otherwise the freshly planted bulbs are sometimes drawn under considerably below their proper depth, and the bloom in consequence is apt to be weakened and retarded the first season.

The Best and Safest Manure to use is Crushed Bones or Basic Slag (for price see page 38). This should be applied at planting time, and may be mixed with the soil; the Crushed Bones may be applied at the rate of 4 ewt. to the acre, or $1\frac{1}{2}$ oz. to the square yard, and Basic Slag may be applied in same manner at the rate of 1 ton to the acre, or $7\frac{1}{2}$ oz. to the square yard. We recommend for light soils Crushed Bones (provided they are genuine) in preference to Basic Slag. On very poor and DRY SANDY SOILS we recommend in addition SULPHATE OF POTASH (for price see page 38), to be sprinkled annually in the autumn over the surface of the ground, after planting, at the rate of 2 ewt. to the acre, or about $\frac{3}{4}$ oz. to the square yard. The potash not only increases the depth of colour in the flowers, but also helps to hold moisture in the soil, a condition so essential to the perfect development of the Daffodil. We also recommend the use of Phytobroma in autumn and spring (see particulars, page 38).

IN EARLY SPRING, as soon as the Daffodils begin to show above ground, the surface soil should be well broken with a hoe, to sweeten it after the heavy winter rains; a handy tool for this purpose will be found offered on page 37. Where practicable it is advisable to cover the ground in November with some light covering material (the idea is to prevent the autumn rains from beating down the crust of the ground, and to break the severity of a sudden frost). We use for this purpose pulled heather; eut furze or gorse, however, answers the same purpose; eut fern or bracken is bad, as it lies too wet; old pea sticks laid across the ground are good, or on flower beds sprays or small branches of cut evergreens stuck into the ground answer the purpose and look decorative; these of course need renewing when they get shabby. Do not mulch the beds with manure.

Planting and Lifting.—The best time to plant, to obtain the finest flowers, is early Autumn (as early as possible), although bulbs may be put in as late as Christmas with fairly satisfactory results; we have planted some Daffodils as late as the second week in February, and had some very good blooms the third week in May. We recommend, however, early planting for best results. The bulbs may be left undisturbed for years in ordinary good loamy soils, but on poor and light soils they are better lifted every two years, as soon as the foliage has died down, and replanted if possible immediately or as early as is convenient. Never plant when the ground is wet and sticky. Do not put silver sand around the bulbs of Nareissi except in the case of N. corbularia.

DEPTH TO PLANT.—The average depth to plant is from 2 to 3 inches, that is to say, a covering of 2 to 3 inches of soil, but not more. As the bulbs vary considerably in size, according to the relative varieties, the best rule to go by is the bulb itself, which should be revered with soil once and a half its own depth, measuring the bulb from the collar of its neek to its actual base. On light sandy soils the bulbs may be planted a triffe deeper than on heavy stiff soils, and in the North of England and in cold localities they should be put in a little deeper than in the warmer southern districts.

Position and Grouping for Effect.—All Dassodils preser partial shade, although most of them will grow equally well in the open. The varieties which are best grown in partial shade are indicated in the following pages by an *. In the flower border, to obtain the best effect, Dassodil should be planted in large groups of irregular outline, each group or elump to contain one variety only; avoid straight lines, circles, and symmetrical designs. Masses of Dassodils should always appear in the Hardy Flower border, where irregular and effective sweeps can be planted between the clumps of herbaceous plants which in their turn grow up and hide as well as shelter the Dassodil foliage while it is going to rest. In grouping Dassodils the season of flowering should be horne in mind, as the varieties bloom in succession from the end of February to the end of May, during which period, by a judicious selection, a constant succession of flowers can be maintained. On page 14 we denote the rotation of blooming.

Naturalising Daffodils in Grass, Etc.—All Daffodils may be planted in grass with perfect success. To produce the best effect, the three groups should be kept separate: thus the Star Nareissi should not be mixed with the Great Trumpets, nor Poet's Narcissi with the Star Narcissi. In planting, make the breaks large and bold, scattering the bulbs over the ground broadcast with the hand, and planting them where they fall. Avoid symmetrical lines or formal circles as far as possible, as these are not found in nature. In planting under trees, avoid places where the drip from the branches is greatest, also where the main roots of the trees come close to the surface.

DAFFODILS never look more beautiful or are seen to greater advantage than when growing on grassy slopes or banks, and we strongly recommend our eustomers to avail themselves of such situations for naturalising Daffodils.

VARIETIES SPECIALLY SUITABLE FOR NATURALISING IN WOODLANDS, GRASSLANDS, GLADES, ETC., DELIGHTING IN PARTIAL SHADE.—The following are mostly free seeders, and will therefore spread naturally; they are mostly wild plants—Abscissus, Countess of Annesley, Excelsior, Golden Spur, Henry Irving, Obvallaris, Spurius, English Lent Lily, Princeps, Seotieus, Albicans, Pallidus Præeox, Mosehatus of Haworth

Naturalising Daffodils in Grass, Etc.—continued.

(very pretty in grass), Johnstoni Queen of Spain (in our opinion the most beautiful of all for this purpose), and all varieties of Poëticus, including the old Double White. The Varieties underlined we do not recommend for the cultivated border, as they deteriorate the second year, while in woodlands, grass, or meadowland they flourish.

Varieties for Naturalising in Grasslands, Parks, Meadows, on Lawns, etc.—The following fine trumpet varieties are all good strong growers, as well as being distinct and effective—Emperor, Empress, P. R. Barr, Golden Spur, Queen of Spain, W. P. Milner, Horsfieldii, Madame Plemp, Mrs. Thompson; of the chalice-cupped varieties the following are best suited to the purpose—Incomparabilis Beauty, Frank Miles, Stella superba, Sir Watkin; Leedsh M. M. De Graaff, Duchess of Brabant, Minnie Hume, and Mrs. Langtry; Barrii conspicuus, Flora Wilson, Crown Prince, Ellen Barr, Falstaff, John Bain, Odorus and O. Rugulosus; of the Poets' Narcissi for planting in grass we recommend Poeticus ornatus, Almira, Grandiflorus, Herrick, and Poetarum and the late Pheasant's Eye (Poeticus recurvus); of the double-flowered daffodils, the Old Double Yellow (Telamonius plenus), Butter and Eggs, Eggs and Bacon, and Codlins and Cream may be used.

For Lawns and Tennis Courts which have to be mown early we recommend the dainty Minimus, Cyclamineus, Minor, Nanus, and Lobularis. Being very early varieties the grass may be safely mown in May.

Varieties for Planting by the Water Side.—Daffodils produce a charming effect when growing at the water's edge. The following varieties we can strongly recommend for this purpose—Odorus and Odorus rugulosus, with their rush-like foliage and graceful golden flowers; Duchess of Westminster, fohn Bain, and the old late Pheasant's Eye Narcissus (Poèticus recurvus), with their graceful starry flowers; Emperor, P. R. Barr, and Empress, three noble trumpeters; Sir Watkin, Barrii conspicuus, Stella superba, Beauty, Frank Miles, and the Deuble White Poeticus or Gardenia-flowered Narcissus, etc. In choice spots near the water's edge the charming little Cyclamineus should be planted, as also the sulphur-coloured Hoop Petticoat Narcissus (N. Bulbocodium citrinum), both of which luxuriate in moist grassland.

Method of Planting Daffodils in Grass.—We recommend for this work our Special Bulb Planter (see illustration, page 37). By the use of this implement the trouble of planting bulbs in grass is reduced to a minimum. It takes out a clean, circular piece of turf 2 to $2\frac{1}{2}$ inches in diameter, and of sufficient depth. On making the second hole this piece of turf is released from the planter and lies ready on the ground to cover the bulb with. The soil is not in any way tightly pressed and made hard, which is the case when an ordinary dibber is used, and the appearance of the grass is not spoilt; in fact, after planting 10,000 bulbs with this tool on a greensward, one could hardly detect that the grass had been touched. If the ground is very poor and thin, a compost of fresh soil with an abundance of Crushed Bones (7 lbs. to a bushel) should be made and dropped into each hole before placing in the bulb, a little more should be given as a covering, and then the sod of turf be replaced and pressed down. The bulbs will then be given a fair start in their new quarters. (For price of Barr's Special Bulb Planter, see page 37.)

The Best Time for Planting in Grass is with the advent of the autumn rains, when the ground is in a fairly moist condition, it being impossible to plant whilst the ground is hard and solid from the summer heat; moreover, nothing is gained by planting in hot dry ground, to say nothing of the cost and labour of planting.

CUTTING DAFFODILS FOR DECORATION.

To obtain very fine blooms Daffodils should be cut in a young state, just when the bud is bursting, placed in water and allowed to expand in a greenhouse or sitting-room. The blooms opened in this way are larger and finer in texture and purer in colour than those which develop out of doors.

CULTURE OF DAFFODILS IN POTS OR BOXES.

TIME OF POTTING.—Pot as early in autumn as possible to obtain the finest results and earliest blooms. THE BEST COMPOST to pot Daffodils in is a mixture of two-thirds good fibrous loam (which should be pulled to pieces by the hand and not passed through a sieve, so as to retain in the soil as much old root fibre as possible), and one-third old decayed leaf soil, with a sprinkling of sharp silver sand, adding 1½ lbs. of bone meal or 1 lb. Phytobroma (see page 38) to every bushel of soil, which mix well together before using. In all cases the soil used should be fresh and sweet; never pot in soil that is wet or sticky. Barr's Fertilised Fibre, Shell and Charcoal may also be used; it is light and cleanly to handle, and is a suitable medium for growing all kinds of spring-flowering bulbs in pots or vases, either for indoor decoration or for cutting. (See page 38.)

The Pots should be carefully washed or wiped clean before using. Never pot in dirty or wet pots.

GOOD DRAINAGE should be secured by placing three or more pieces of broken crocks over the hole, placing the crocks with bevelled sides uppermost, then cover crocks with a little rough fibre from the loam. When boxes are used, the slit at bottom of box should be covered with crocks, a good layer of rough fibrous loam placed at bottom of box, or a layer of leaf soil to ensure perfect drainage.

of rough fibrous loam placed at bottom of box, or a layer of leaf soil to ensure perfect drainage.

IN POTTING, the larger bulbs need not be quite covered with soil, the level of which should be half an inch below the rim of the pot so as to allow of watering when in growth. The small bulbs

of the miniature species should be covered with half an inch of soil.

AFTER POTTING, stand the pots or boxes outside in the open, on a firm hottom such as a bed of ashes or gravel path to prevent the entrance of worms. The pots should be plunged bodily in Cocoa Fibre, old decayed leaf soil, or very old ashes, free from sulphur, so as to be surrounded with the covering material and with their tops 2 inches below the surface. This will secure a natural and moist condition to the bulbs and encourage root action. So long as the pots remain buried they will require no watering.

Culture of Daffodils in Pots or Boxes-continued.

THE POTS OR BOXES SHOULD REMAIN PLUNGED for a period of not less than twelve weeks, after which first-early sorts (marked 1 in catalogue), such as GOLDEN SPUR, HENRY IRVING, OBVALLARIS, etc., may be transferred to a greenhouse or sitting-room where the night temperature does not exceed 55° and that of the day 60°. A higher temperature should not be given if well developed blooms are wished for. If the pots ate taken into a sitting room they should be kept during the day in a sunny window and at all times should be protected from draughts and gas heat. Later-flowering Daffodils (marked in catalogue 2, 3, and 4) should be brought into warmth later and in succession, thus sorts marked 4 should not be removed from the plunging bed until February or March. No Daffodils will bear hard forcing or bottom heat. After the bulbs are out of the plunging bed, give the plants as much light and air as possible,

and once a week a very little weak liquid manure water until they come into bloom.

Of the stronger growing sorts use three to six bulbs, according to size of hulb, for a pot measuring $4\frac{1}{2}$ to 6 inches in diameter; of the small miniature kinds, such as N. Minimus, Nanus, Minor, Cyclamincus, Triandrus, Juncifolius, and Corbularias, use twelve to eighteen bulbs for a $4\frac{1}{2}$ to 6-inch pot. These small-flowered dwarf-growing species are most charming in pots or little shallow pans. The following may be had in bloom in January:—Minimus, Minor, Nanus, and Cyclamineus, and these may be mingled with Scilla sibirica and Chionodoxas, as both bloom at the same period and produce a charming contrast. For pot-culture the largest bulbs only of Minimus, Cyclamineus, Triandrus, and Corbularias should be used, as being collected when in bloom there is an uncertainty in their flowering the first season. The White Hoop Petticoat Narcissus should be potted in almost pure sand kept well moist, and if placed at once in a cold frame after

potting may be had in bloom by Christmas. (See Rock Garden Collections of Miniature Daffodils, page 8.)

If Daffodils are wanted in quantity for cutting early in the season, plant thickly in boxes, giving same culture as recommended above for growing in pots. Of the best varieties to grow for carly forcing in boxes, the following command a first place: First early sorts—Queen of Spain, Henry Irving, Golden Spur, Sir Watkin, Old Double Yellow Daffodil; Second early sorts—Emperor, Empress, Horsfieldii,

P. R. Barri conspicuus, Incomparabilis Beauty, and Stella superba.

CULTURE OF DAFFODILS IN VASES AND BOWLS
In Barr's Special Fibre Mixture.

A charming effect can be obtained by growing Daffodils in fancy vases or bowls, with or without drainage holes, by simply using our specially prepared Fertilised Fibre, Shell and Charcoal Mixture (ready for use, 3s. 6d. per bushel, 1s. per peck); the mixture is light, clean, and nice to handle, and remains sweet; indeed, it is preferable to soil where Daffodils and other bulbs are grown in fancy bowls and vases.

Three bulbs of N. Queen of Spain growing in Barr's Fertilised Fibre in a 4-inch "Doulion-ware" Vase, without drainage hole.

Culture.—Fill the vasc or howl with the Fibre, Shell and Charcoal Mixture up to within a little below the rim, and plant the bulbs in the same manner as with ordinary potting soil, just covering them; the mixture may be shaken down into place after planting and lightly watered, but should not be pressed down tightly, or the bulbs will be forced upwards when root growth commences.

After planting, cither of the following plans may be

(a) The bowls or vases may be plunged outdoors on a bed of cocoa fibre or ashes, and covered entirely with cocoa fibre, leaving them thus for 8 to 12 weeks, when the bulbs will have made some top growth.

(b) Or the bowls may be plunged in a cold frame, airy cellar, or out-house instead of outdoors; with this treatment, however, it will be necessary to occasionally give water.

(c) A third plan is to place the bowls after potting in a dark or moderately dark airy place, cool but not too cold; they must not be placed in a close cupboard or the bulbs

will certainly suffer.

In the case of bowls plunged outdoors there will be no need to give any attention in the way of watering, etc., as they will, of course, have abundance of moisture from the autumn rains. Where, however, the bulbs are not exposed to the rain, the bowls should be examined once or twice a week, care being taken that the fibre mixture is kept uniformly damp; but for the first week or two after planting water should be given very sparingly, sufficient only to keep the fibre damp enough to encourage root action. As soon as the bulbs are well rooted, water should be given more freely, the fibre mixture being then kept quite moist; if the mixture is allowed

at any time to become dry, even for a day, the buds will go blind; should by any chance too much water have been given, the bowls may be drained by carefully tipping them on their side. If obtainable rain water is the best to use.

When the bulbs have made some top growth the bowls should be removed to the sunny window of a sitting room, where they will get the morning sun, or be kept in a cool greenhouse close to the glass, it being necessary that they should be given sufficient light and air to prevent the foliage from becoming drawn. Draughts and gas heat must be carefully avoided.

No bottom heat should be given, and a temperature of 55° to 60° hy day and 50° to 55° by night is

sufficient to obtain good blooms; the bulbs resent too warm a temperature.

For Bowls and Barr's Fertilised Fibre Mixture, see page 38.

per 100, 10/6; per doz. 1/6

Miniature Daffodils for the "Rock Garden."

The following are charming little subjects for rockwork, where their dainty flowers are seen to perfection. They should be left undisturbed for years, and, if happy, will soon establish themselves and afford a lovely picture in early spring. All the Corbularias (except Corbularia monophylla) and Cyclamineus like moisture, and should therefore be planted at the foot of the rockery. Corbularia monophylla flourishes in a warm dry sheltered situation, planted in almost pure sand; when coming into bloom give water freely. Triandrus albus (Angel's Tears) and Juncifolius delight in partial shade and a light gritty soil, and should be given a well-drained position. In the case of these Miniature Daffodils, the ground may be carpeted with close-growing surface-rooting plants, such as Arenaria caspitosa, Thymus serpyllum vars., T. lanuginosus, Herniaria glabra, Mossy Saxifragas, etc.; these plants provide a natural protection for these little bulbs, besides keeping their dainty blooms from being splashed and soiled in rainy weather. We prefer, however, seeing these little gems peeping ont of grass, and can supply seed of suitable fine dwarf grasses for sowing in September after planting the bulbs; this sowing will give a fine green carpet by the following spring when the Narcissi bloom.

Full descriptions of the following Miniature Daffodils will be found in body of Catalogue.

For Daffodil Seed for Autumn Sowing, see page 37.

Barr's New Seedling Daffodils for 1911.

The following Wist of Daffordis Comprises some of the finest novelties, and includes new seedlings of our own raising and those of the Rev. G. H. Engleheart, the Rev. G. P. Haydon, Mr. J. C. Williams, Mr. P. D. Williams, Mrs. Backhouse, and Mr. E. M. Crosfield, the most successful hybridiscrs of recent years. We would specially draw attention to the following grand exhibition kinds: Bedouin, Caesar, Charm, Cossack, Dresden, Empire, Eros, Furnace, Jasper, Lewis Carrol, Lord Kitchener, Marie Louise, Mermaid, Messina, Michael, Michael Angelo, Mrs. George H. Barr, Peter Barr, Red Beacon, Red Chief, Seraphine, Sirdar, Sir Galahad, Snow King, Socrates, St. George, Tennyson, Timon, and White Standardall of great beauty. We would mention that we purchased in 1910 from Mr. Charles Dawson (who has given up growing Daffodils) his "Rosemorran" Daffodil seedlings, containing many beautiful varieties, and at the same time took over his Daffodil garden for the rearing of our new seedling varieties. Visitors at the London and Birmingham Shows will well remember the high quality of Mr. Dawson's "Rosemorran" flowers. We have also now removed from our Surbiton Nurseries to Taplow, where in future a fine display of our Daffodils and Tulips may be seen in Spring.

Where we have a record, we give in inches the heights as registered at our Nurseries.

The relative qualities as we judge them are indicated by xx, xxx, xxxx, the highest quality flower being given the most marks. The figures after the names indicate the relative period of flowering, (1) being earliest, (5) being latest.

Adonia (Barrii) (4), new 1909, raised by Mr. E. M. Crossfield, perianth cream, hroad and elegantly formed, cup fiery orange-scarlet, prettily fluted; the colour is very lasting, ht. 12 in.	£	each s. 5	d
Ailsa (Trumpet Daffodil), xxxx, raised by Mr. E. M. Crosfield, a beautiful chaste flower, perianth pure white, trumpet white, large and bold with recurved margin. AWARD OF MERIT R. H. S., 1907.	5	0	0
Arctic Light (Leedsii), xxxx, new 1911, a loyely flower of a cool shade, having a snowy white pertanth and large flattish lemon crown with green centre, ht. 14 in	5	5	0
Bernardino (Incomparabilis) (3), xxxx, a grand flower, with very large creamy perianth and a very large pale cup, prettily fluted and heavily stained deep orange-apricot	3	3	0
Bloodstone (Barrii), xxxx, new 1911, raised by Mr. C. H. Cave, a very lovely flower, with ample round snowy white perianth, and a deeply flanged cup of fiery orange with greenish centre.	5	5	0
Buccaneer (Giant Incomparabilis) (4), xxx, new 1908, flower large with broad white imbricated perianth, crown large bright yellow, straight and fluted, handsome, ht. 16 in	0	10	6
Cæsar (Poetieus) (5), xxxx, new 1911, a remarkably fine flower of perfect form, measuring slightly over 3 inches across, with very broad rounded solid white perianth, of equal size and well imbricated, and a large lemon-yellow eye edged dark madder-red; flowers erect and borne on long stout stems, ht. 16 in	7	7	0
Capella (Giant Leedsii), xxx, a very pretty well-balanced flower with pure white perianth and long crown, primrose shading to white, elegantly frilled	ı	I	0
Cardinal Wolsley (Barrii), xxxx, <i>new</i> 1910, a very lovely flower with broad snowy white perianth, slightly reflexing and a very flat large fluted crown of a brilliant orange-apricot	3	3	0
Catriona (Trumpet Daffodil), xxxx, raised by Mr. E. M. Crosfield, perianth creamy white and slightly campanulate, trumpet cream-coloured, bold and very elegant with open mouth elegantly frilled at brim; beautiful	3	3	0
Challenger (Barrii), xxxx, new 1910, a magnificent flower measuring more than 3 in across, of fine form, with solid Poeticus-white perianth and a much expanded crown measuring about 1 in. across, soft canary with a striking broad margin of brilliant fiery red	32	10	0

NARCISSUS CLEOPATRA.

A magnificent variety in way of *Monarch*, but larger; very broad yellow imbricated perianth and long bold deep yellow trumpet. Raised at our own Nurscries. AWARD OF MERIT R.H.S. AND AT BIRMINGHAM. See page 15.

Barr's General List of Daffodils

For Alphabetical Index, see page 2 of Cover.

The following list of Daffodils embraces the highest class and most distinct varieties, surpassing in beauty land diversity lall other assortments offered to the public. It represents the cream of our Collection (over 500 kinds), and the best of the newest varieties in commerce up to 1911, several being offered to the public for the first time this season.

During the past few years we have rejected many of the older kinds which we considered had been superseded by better sorts at equally moderate prices. We can, however, generally supply such if required, as, although we do not catalogue them, we keep a small stock of them at our Nurseries.

Time of Flowering.—The relative period of flowering of the different varieties and species out of doors we have denoted by means of numbers after the names, thus:

(1) 1st early, flowering from February to early March.

(2) 2nd early, flowering in March.

(3) Varieties flowering in mid-season, or early in April.

(4) Late-flowering varieties, from middle to end of April.

(5) Very late-flowering varieties, opening in May.

The actual period of blooming depends upon the season and district; thus in early districts (1) would commence in January and early February, while in colder districts end of February or beginning of March; but the natural rotation would remain the same.

Height.—In most cases we give also the heights in inches as recorded at our Nurseries.

Quality of Flower.—Each season we go carefully over our Daffodil collection with a view to recording the quality of each variety.

This we indicate by x, xx, xxx, and xxxx, giving the most marks to those we judge to be the finest.

We trust this record may be found useful to amateurs in making their selections.

Cultural Marks.—* The varieties marked thus * thrive best under the shade of deciduous trees, naturalised in grass in shady nooks, or on grassy slopes facing north.

† indicates those kinds which should be selected where Daffodils are grown in pots or for exhibition; they are, however, also splendid border varieties.

§ indicates those Daffodils which, besides being fine border plants, make a pretty effect when naturalised in grass; they are all strong growers and free bloomers.

Any Daffodil not offered in this Catalogue we can generally supply, if required.

DIVISION I.—TRUMPET DAFFODILS.

DISTINGUISHING CHARACTER.—TRUMPET OR CROWN AS LONG AS OR LONGER THAN THE PERIANTH SEGMENTS.

(A) YELLOW AND SULPHUR-COLOURED TRUMPET DAFFODILS.

Yarieties with Yellow, Lemon or Sulphur-coloured Trumpet and Perianth of same shade or lighter (but not white).

*Abscissus (4), x, a native of the French per doz. each.

Pyrences, perianth sulphur-yellow, long straight s. d. s. d yellow trumpet; the latest flowering of all Trumpet Daffodils, and recommended for naturalising in grass, woodlands, etc., where, when established, it flowers freely, ht. 12 in.

†George Philip Haydon (3), xxxx, raised by Rev. G. P. Haydon, a very large refined Daffodil, perianth primrose, broad and of fine texture, trumpet very bold, canary-yellow with very large open mouth boldly fluted and flanged, a strong grower with very broad foliage, ht. 18 in		
†Glory of Leiden (3), xx, a very bold Giant Trumpet Daffodil, the flowers staring one full in the face, trumpet rich full yellow, perianth pale yellow, sometimes with deeper yellow markings, ht. 14 in	5	00 6
†Golden Beauty (1) xxx, new 1910, a remarkably handsome large trumpet Daffodil, almost a self-brilliant yellow, perianth broad with elegant twist, trumpet large and bold, with a very deeply flanged mouth, ht. 19 in	_	7 6
§†Golden Bell (3), xx, broad light yellow twisting perianth, large bold golden trumpet, with open finely frilled mouth, tall grower and free bloomer, ht. 14 in	7	6o 8
§†Golden Spur (1), xx, native of the Netherlands, perianth large and spreading, trumpet large and distinctly lobed, deep rich self-yellow; an early forcer and a hand-some Daffodil for borders and grass, free seeder, ht. 18 in Strong bulbs, per 100, 8/6	r	3 0 2
†Hamlet (2), xxx, a very handsome flower after the style of <i>Emperor</i> , and having a large broad flat primrose perianth and a well-formed bold yellow trumpet, ht. 18 in. See coloured plate in "The Garden," August 19th, 1911	50	04 6
§†Henry Irving (1), xxx, a native of the Netherlands, broad spreading yellow perianth, large yellow trumpet, very handsome, excellent for foreing, also for cultivation in grass or borders, ht. 18 in	1	o
§Hon. Mrs. Jocelyn (4), xx, raised by the Rev. G. P. Haydon, flower large and elegant, of a rich uniform golden-yellow, with very long wingy perianth and a straight crown, ht. 15 in.	21	02 0
†Isolde (5), xxx, raised by the Rev. G. P. Haydon, a very handsome large flower, measuring 5 inches across, with hold campanulate primrose perianth, and a long soft primrose trumpet, ht. 20 in. AWARD OF MERIT R.B.S., 1906		
Johnstoni Queen of Spain. See Triandrus Hybrids, Division V. page 31.		
†King Alfred (1), xxxx, a remarkably handsome Daffodil which we can strongly recommend; flowers of large size, great substance, and refined finish; colour a uniform		
intense rich golden; trumpet large and of elegant form, with open deeply frilled mouth; very tall vigorous grower and free bloomer; foliage of a handsome bluish shade, ht. 24 in. FIRST-CLASS CERTIFICATE R.H.S., AWARD OF MERIT R.B.S. At the MIDLAND DAFFODIL SOCIETY, April 18th, 1905, we were awarded for this Daffodil the PREMIER PRIZE. See Illustration, page 14	60	05 6
§Lady Sybil (1), xx, raised at our Nurseries, flower of medium size and a uniform primrose colour; trumpet short with open mouth, prettily flanged, and shaded silver on the inside, giving a very pretty effect, ht. 11 in.	5	6o 6
†Lord Roberts (3), xxxx, a grand Trumpet Daffodil, raised at our Nurseries; flowers of enormous size, golden-yellow, with broad massive perianth and noble trumpet; tall grower and free bloomer, with strong constitution, height 23 in. Awarded FIRST-CLASS CERTIFICATES by the R.H.S., MIDLAND DAFFODIL SOCIETY, CORNWALL DAFFODIL	0.5	0 9 6
Society, and Devon Daffodil Society	95	00

Yellow Trumpet Daffodils—continued.	ner	doz. ea	ch
†Lorna Doone, a fine bold flower of good substance, perianth yellow, trumpet deep	s.	d. s .	d
yellow; of fine form		2 3	
delights in a deep moist soil; a rather shy bloomer per 100, 7/6 Extra fine stock ,, 12/6	I	90	
†Michael. See New Seedling Daffodils, page 11each £25 §†Mikado (2), xx, flower of M. J. Berkeley form, but much finer; colour golden-yellow, with graceful twisted perianth, and very large trumpet with wide open mouth, deeply flanged at brim; very showy and free flowering, ht. 15 in per 100, 55/-	7	60	8
Minimus, true (1), the smallest and dwarfest Trumpet Daffodil, flowers rich full yellow; height about 3 inches, flowering outdoors in February; a dainty little gen for edgings, nooks on rock-work, or to naturalise in grass, and for pot culture. It likes a peaty soil. In 1887, during a tour in Spain, the late Mr. Peter Barr found this charming miniature Daffodil growing freely amongst gorse, with a south aspect. For our annual supply we have to depend upon collected bulbs which are taken up while the foliage is green: in consequence there is a possibility that all the bulbs may not bloom the first season,		6.0	2
but a proportion will	6	60	7
M. J. Berkeley, omitted, being so shy a bloomer. [Monarch (3), xxx, raised at our Nurseries, a noble flower, and one of the most refined			
of all the Giant Golden Trumpeters; perianth and trumpet rich full yellow and very large, of perfect form and fine substance, growth strong and sturdy, ht. 20 in	36	o3	6
*Nanus, true (1), rich full yellow, very dwarf and early, a gem for edgings and naturalising on grassy banks, etc., ht. 6 in.; now rather scarce. Lobularis is generally sold for it, but is quite a distinct variety and will be found offered on page 19	4	60	5
†*Obvallaris (Tenby Daffodil) (1), xx, this very distinct variety has all the fine qualities that delight a connoisseur, perianth and trumpet full yellow, very early; it is best grown in partial shade, and is a fine variety for naturalising in grass; it also	**		J
forces well; ht. 12 in		10	
§†Othello (4), xx, primrose perianth, broad and eampanulate, trumpet rich yellow, of	I		
good substance; dwarf sturdy grower, ht. 10 in	7	60	8
more refined in colour, good robust grower §Phil May (3), xx, large bold yellow straight trumpet, with paler yellow broad perianth,		03	
strong sturdy grower	_	- ···5	6
form, very handsome, a sturdy grower and free bloomer, ht. 16 in.; we strongly recommend it for cutting and to plant largely in flower-beds and borders, and in grass, etc. Extra strong selected bulbs, per 1000, 80/-; per 100, 8/6	I	30	2
†Ranger Johnson (4), xxx, a beautiful refined flower of uniform soft yellow, trumpet large and of good substance, elegantly flanged at mouth, ht. 15 in	25	02	3
§Ray Smith, xx, flowers a uniform rich yellow, distinct and elegant in form, perianth gracefully twisted and tapering to a point; a free bloomer and strong grower with			
broad deep glaucous blue foliage, ht. 16 in	4	30	5
handsome trumpet, a bold and noble flower		o3 8	
§Santa Maria (1), xxx, found by the late Mr. Peter Barr in Spain, rich deep golden- yellow, perianth elegantly twisted, a distinct and charming early flower, recommended for			
naturalising in grass, woodlands, etc., ht. 14 in	5	60	
†*Spurius (1), xx, self-yellow, with a broad imbricated hooded perianth and a large expanded trumpet; forces well	0	10 –	_
†The Rising Sun. See New Seedling Daffodils, page 12each £4 4s.			
§Van Dyck (1), xx, a bold handsome flower, rich golden-yellow, trumpet with broad open mouth	I	40	2
tVan Waveren's Giant (3), xxx, a giant Trumpet Daffodil, flowers of immense size, perianth primrose and of rather campanulate form, trumpet bright yellow with very large open mouth, flanged at brim, ht. 18 in.		- 16	6
§†Willie Barr, xx, perianth soft yellow of fine campanulate form and good substance, trumpet deep yellow with elegant brim; a fine bedder, ht. 15 inper 100, 42/-	5	60	6

(B) WHITE TRUMPET DAFFODILS.

Varieties with White Perianth and White or nearly White Trumpet. Most of the Daffodils in this section thrive best in fibrous virgin loam, mixed with well-decayed

leaf-soil; generally speaking they dislike manure; where, however, the soil is very poor, be basic slag may be used (for full directions, see page 2). The varieties marked thus * thrive shade of deciduous trees, naturalised in shady grassy nooks, or on grassy slopes facing north.	e best	t in t	he
†Ailsa. See New Seedling Daffodils, page 9	s, d	s. ea	d.
§†Albicans (2), xx, white perianth and long cream-coloured trumpet passing to white, elegantly recurved at brim, a strong grower and free bloomer, ht. 14 in per 100, 8/6			
†Alice Knights (1), xxx, raised at our Nurseries, the earliest of white Trumpet Daffodils and a beautiful flower; perianth white, trumpet creamy white of elegant form with prettily frilled open mouth; the whole flower is of great substance and lasts well, whether cut or on the plant; of good constitution and a free bloomer, ht. 14 in. AWARD OF MERIT R. H.S., 1905, and R.B.S., 1906.

DIVISION II.—INCOMPARABILIS.

INCOMPARABILIS GLORIA MUNDI. (Example of a Flower in Division II.)

Large Chalice-Cupped Daffodils or Star Narcissi.

DISTINGUISHING CHARACTER.—CUP OR CROWN MEASURING FROM ONE THIRD TO NEARLY EQUAL THE LENGTH OF THE PERIANTH SEGMENTS. (FOR VARIETIES HAVING THE CROWN EQUAL THE LENGTH OF PERIANTH SEGMENTS SEE DIVISION I.)

The varieties of Narcissus Bernardi and Nelsoni, also the larger-flowered varieties of Engleheartii, are now placed under this division.

The beautiful **Star Narcissi** commence flowering in March, and furnish a succession of bloom throughout April. All are of elegant beauty, and as cut flowers are extensively used for furnishing vases and table bouquets. For this purpose they should be grown in quantity in boxes and forced for early bloom (see page 3). They make charming pot plants, while in beds and borders they are very showy and naturalised in grass they produce a graceful effect.

§Autocrat (3), xx, large broad perianth full yellow, cup yellow, much expanded, ht. 20 in.

per 1000, 50/-; per 100, 5/6 o 10... —

perianth creamy, rather weak; a striking flower, ht. 12 in. FIRST-CLASS CERT. R.H.S. †Yellow Prince. See New Seedling Daffodils, page 12		5 7	

BARRII SIDDINGTON. (Example of a Flower in Division III.)

DIVISION III.—BARRII.

Short-Cupped Daffodils, or Star Narcissi. (Incorporating the varieties hitherto classed as Burbidgei.)

DISTINGUISHING CHARACTER.—Cup or crown measuring less than one-third the length of the perianth segments (not including Poeticus, which forms a class by itself).

For a long time trouble was being experienced in the placing of certain new seedlings under the **Barrii** and **Burbidgei** sections, as the two divisions ran so much into one another. The revising committee therefore decided to make only one section of them, retaining the name **Barrii**.

The chaste beauty of these shorter-cupped Narcissi is the more highly appreciated when the cut flowers are seen arranged in vases. The brilliancy of colouring in the cups of some, and the dainty elegance of others, render them all more or less valuable exhibition flowers. The cheaper kinds we can strongly recommend for beds and borders, and for naturalising in grass, woodlands, wild gardens, etc.

Per doz. each.

†Adonia. See New Seedling Daffodils, page 9 s. d s. d each £1 5s.

DIVISION IV.—LEEDSII.

The Eucharis-flowered or Silver-White Fragrant Star Narcissi.

Comprising all the Star Narcissi (large chalice-cupped and short-cupped) which have pure white or silvery white perianth segments and cup or crown white, cream or pale citron.

In the working out of the new classification, the revising committee felt that it would be unwise to break up this section and distribute it among the Incomparabilis and Barrii forms, seeing how distinct a "colour" section it was, and how well known to all Daffodil growers.

These chaste and beautiful Daffodils are highly prized for indoor decoration, while to cut for bouquets their fragrant flowers are greatly in demand. Plant 3 or 5 bulbs in a 5-inch pot. In flower beds and borders they are most charming, while naturalised in grass they produce a lovely effect.

§†White Lady (4), xxxx, an exquisite flower, with a broad white perianth of perfect form, and a dainty cup prettily crinkled of a beautiful pale canary shade; a very free bloomer. AWARD OF MERIT R.H.Sper 100, 35/- 5 00 6
†White Queen (3), xxxx, resembling a White Sir Watkin, large broad pure white perianth, bold straight cup, pale eitron passing to white, with an exquisitely frilled edge; a flower of the highest refinement, ht. 15 in. AWARDED FIRST-CLASS CERTIFICATE R.H.S. —9
§†White Slave (2), xxxx, a handsome well-balanced flower, measuring 3½ in. across, perianth snowy white, very broad and imbricated, cup spreading, pale citron shaded white, elegantly fluted and frilled, tall grower, ht. 18 in
DIV. V.—TRIANDRUS AND TRIANDRUS HYBRIDS. Triandrus and all hybrids obviously containing Triandrus blood, such as Queen of Spain (a wild Triandrus Hybrid), Agnes Harvey, Bennett-Pöe, Earl Grey, etc.
The introduction of Triandrus blood in hybridising has resulted in such a very distinct group of hybrids that the Classification Committee of the R.H.S. deemed it advisable to make one section of them. For grace and beauty they are unsurpassed. We recommend them being given a situation partly shaded by trees, and if a little very fine dwarf grass seed is sown amongst them, the beauty of their flowers is enhanced. Once planted they may remain undisturbed for years.
hybrids that the Classification Committee of the R.H.S. deemed it advisable to make one section of them. For grace and beauty they are unsurpassed. We recommend them being given a situation partly shaded by trees, and if a little very fine dwarf grass seed is sown amongst them, the beauty of their flowers is enhanced. Once planted they may remain undisturbed for years.
hybrids that the Classification Committee of the R.H.S. deemed it advisable to make one section of them. For grace and beauty they are unsurpassed. We recommend them being given a situation partly shaded by trees, and if a little very fine dwarf grass seed is sown amongst them, the beauty of their flowers is enhanced. Once planted they may remain undisturbed for years. TRIANDRUS, The Cyclamen-flowered Daffodils with reflexing perianth. THE DAINTY LITTLE "ANGEL'S TEARS" DAFFODIL (Triandrus albus) was found by the late Mr. Peter Barr on the mountains of Portugal and Spain, growing in very hard, firm, fine gritty soil, sometimes in the narrowest fissures of granite and slatestone rocks. All in this section make lovely little pot plants, and grown thus should be given cold frame culture. Established on rockwork they form a picture full of grace and beauty. They prefer shade, a gritty soil, and a well-drained position.

NARCISSUS TRIANDRUS HYBRIDS-continued.

(There are many other beautiful hybrids belonging to this section, but they are not yet in commerce.)

white throughout, crown cup-shaped and prettily fluted; of very graceful habit,

§†J. T. Bennett-Poe (3), xx, a pretty hybrid, with cream-coloured perianth and

†Zoë (3), xxx, perianth delicate primrose, straight lemon-coloured trumpet, very elegant, ht. 15 in.....each £1 1s.

Division VI.—Cyclamineus & Cyclamineus Hybrids. Seeing that Cyclamineus blood, like that of Triandrus, imparts such a distinct form to Daffodils, a

separate division has been made for its hybrids. It has been used by many hybridisers as a parent, but as a rule the progeny has not been long-lived. It is possible, however, that we may yet obtain hybrids with a stronger constitution to come under this division.

CYCLAMINEUS (Half natural size).

CYCLAMINEUS (1), the Yellow Cyclamen-flowered Daffodil.

This beautiful little Daffodil was re-introduced into cultivation in 1887 per doz. each by A. W. Tait, Esq., of Oporto, after being lost sight of for 200 to s. d. s. d 300 years. It is the earliest of all Daffodils and is a charming elegant little flower of very distinct form; the trumpet is rich yellow, straight and tube-like, clegantly serrated at mouth, while the perianth is reflexed as in a Cyclamen. A valuable little species for pot-culture, edgings, rockwork, and to naturalise in grass and shady nooks, or at the water's edge; it delights in a dampish sandy peat soil, ht. 6 in., FIRST-CLASS CERTIFICATE R.H.S. As we have to depend for our annual supply upon collected bulbs, and these have to be taken up while the foliage is still green, they are not all likely to bloom the first season. per 100, 21/-

DIV. VII.—JONQUILLA AND JONQUIL HYBRIDS. Under this division are placed the Single Jonquil and all Daffodil hybrids where the characteristics of the Jonquil parent dominate, such as Odorus, etc. †JONQUILLA (The Single Sweet Jonquil) (5), xxx, bearing in May graceful heads of s. d. s. d numerous small rich yellow flowers, prized for their delicious secnt, ht. 14 in. per 1000, 25/-; pcr 100. 2/9 0 35/-; Extra large bulbs ,, ,, 4/-0 7... -†Buttercup, xxxx, a cross between Emperor and Jonquilla, flower of very distinct handsome form, borne on a long stem; colour rich Buttercup-yellow, almost a self, with broad stiff perianth very slightly reflexing and of same length as the trumpet, which is straight and of great substance; the flower has a delicate Jonquil perfume. AWARD OF MERIT R.H.S., April 14th, 1908each £7 7s. §†Odorus Campanella (Campanelle Jonquil) (2), xx, native of France, having a rush-like foliage and several bright yellow fragrant flowers on a stem, ht. 18 in. Miniature Daffodiis, flowering soon from seed, all beautiful on rockwork :

Bulbocodium conspicuum and miniature early yellow; Triandrus albus, Triandrus calathinus and Juncifolius

USEFUL TOOLS FOR BULB PLANTING, Etc.

Barr's Special Bulb Planter (Regd. 548091), specially designed for planting Daffodils and other bulbs in grass. This tool cuts and lifts a clean circular piece of turf which is released from the cup when the second hole is made, and lies ready at hand to fill in the holes when the bulbs have been

put in, it being only necessary to remove a little of the soil from the bottom of the sod. A time must be chosen for planting when the ground has become softened after early autumn rains and not when in a hard and baked condition, as it is then impossible to use this or indeed any other tool with success. By the use of BARR's SPECIAL BULB PLANTER a large quantity of bulbs may

be planted in a very short time, and without the least disturbance of the sward. The length of the tool is 38 inches over all, weight about $3\frac{1}{2}$ lbs. The cup is manufactured from high-class hardened steel and always carries a keen cutting edge.

Supplied in 3 sizes of eup:—To cut out a circular hole 2, $2\frac{1}{4}$, or $2\frac{1}{2}$ inches diameter, each 10/6. We shall send the medium size ($2\frac{1}{4}$ in.) if no instructions to the contrary are given.

Special Bulb Barr's 468878), specially designed for dibbling bulbs into borders, etc.; steel shod, with strong iron tread and cross wooden handle; a good strong heavy tool, weight about 63 lbs, length 36 inches over all. 9/6 each.

Special Fancy Vases and Bowls for growing Daffodils, etc., in.

We have had special little fancy vases made for us by Messrs. Doulton for growing Daffodils and other spring bulbs in our Fertilised Fibre and Charcoal Mixture. The vases are of elegant shape, of neutral art green and drab shades, and without drainage holes, thus saving the use of saucers. They will be found most useful for growing not only Daffodils in, but also Tulips, Hyacinths, Crocuses, early Scillas, Snowdrops, Chionodoxas, and Lily of the Valley, also the charming winter-flowering Irises—reticulata, etc., either for table decoration or the greenhouse. During summer these bowls are very useful for holding cut flowers, etc. All Daffodils which may be grown in pots may also be grown in these fancy bowls, and in the foregoing pages we have indicated thus † those kinds most suitable for the purpose.

Barr's "Doulton-Ware" Bulb Vases, unglazed, neutral drab shade, $2\frac{1}{2}$ in. dia., -/9; 4 in. dia., 1/3; $5\frac{1}{2}$ in. dia., 2/-; 7 in. dia., 3/- cach. glazed dark green, $2\frac{1}{2}$ in. dia., -/9; 4 in. dia., 1/3; $5\frac{1}{2}$ in.

dia., 2/-; 7 in. dia., 3/- each.

Fancy Decorated Japanese Bowls:—5 in. dia., -/10; 6 in. dia., 1/3; 7 in. dia., 1/9; 8\frac{1}{2} in. dia., 3/-; 9½ in. dia., 4/-; 10¾ in. dia., 6/-; 12 in. dia., 8/6 each.

Illustrated List of Vases and Bowls for Bulb Culture sent on application,
