SEED BULB&PLANT WAREHOUSE

BARR & SON,

12 & 13, KING STREET, COVENT GARDEN, LONDON, W.C.

"A useful manual for the amateur in the selection of flowers for the adornment of the garden, and vegetables for the use of the table."

Immediate proceedings in Chancery will be taken against all infringement of the Copyright of this Work.

Presented to the L. H. Bailey Hortorium by the Missouri Botanical Garden, 1972.

#### SPECIAL NOTICES.

- Quality.—We prove, under glass, the growth of all Seeds, immediately they arrive from the growers, and afterwards test their purity at our Experimental Grounds.
- 11. Vegetable Seeds, pages 46 to 64.—We quote only the best varieties, and take every possible care to have the finest "stocks," and to attain this a constant series of comparative tests is maintained at our Vegetable Trial Grounds.
- III. Flower Seeds, pages 4 to 4500 or distlembraces a selection of the finest varieties, and the most advanced types in the respective families.
- IV. Gladioli, page 63.—These are, perhaps, of all bulbous plants, the most valuable for effect in the flower garden, and to cut for vases. For beautiful named sorts, see pink List enclosed.
- V. Iris, page 64.—Our collection is the finest in Europe, and to assist amateurs, it is arranged in natural V. Iris, page 64.—Our collection is the finest in Europe, and to assist annature, it is arranged in lactuar groups, to facilitate their making selections. The varieties of Iris Barbata are grand decorative plants for the margins of lakes, ponds, and such places, while for wild gardens, shrubberies, and woodland walks they are unrivalled, and as cut flowers for vases, unsurpassed. Of the Beardless Iris, a group from our grounds was figured in The Garden, 20th December, 1879.
   VI. Pæonias, New Double, page 62.—We grow at Tooting one of the finest collections of these in Europe. And of Pæony species we possess the only complete collection in Europe, see page 62.
- VII. Daffodils.—Our collection is the most complete ever brought together; it consists of all the older species and varieties with all the new sorts raised by Mr. WILLIAM BACKHOUSE, Mr. EDWARD LEEDS, HERR MAX LEICHTLIN, &c. The grounds at Lower Tooting are open to visitors from the 1st of March, on Tuesdays Thursdays, and Saturdays.
- VIII. Miscellaneous Bulbs.—Our collection of these is extensive, and a display of one sort or another is maintained throughout the year. The beautiful varieties of Meadow Saffron, and the many rare and beautiful sorts of Autumn Crocus, flowering from August, and these latter we especially call attention to, as our collection is exceedingly rich in rare sorts, and also for their importance in flower borders. On page 11 are a few bulbs and plants we recommend for spring-planting. The Plantain Lily, page 63, Christmas Roses and Lenten Roses, page 61, Lilies, page 62, Hyacinthus candicans, page 63, Tigridias, page 64, Tritomas, page 64, Tuerose, page 63.
  - IX. Carriage by Rail may be deducted at settlement of account, on orders for Seeds to any Railway Station in the United Kingdom, and to all ports on the Irish Coast.
  - X. Orders, paid in advance, if necessary to be sent by Rail, can either be forwarded carriage paid, or a liberal equivalent in goods added. This latter course will be adopted unless we are otherwise
  - XI. Packages.—A small charge is made for these, and if returned within a fortnight, allowance will be made for the same. In returning empties, the sender's name should invariably appear on the label for identification, with the date of dispatch and the name of the Railway Company notified by post.
  - XII. Fruit and Forest Trees, Shrubs, Plants, Soils, Watson's Lawn Sand, Barr's Cut Flower and Fruit Conveyance Boxes, Barr's Improved Indoor Frames, Barr's Improved Hydropult Garden Engines-on these we do not allow carriage.
- XIII. Five per cent. may be deducted from accounts if paid within one month from date of invoice.
- XIV. Post Office Orders to be made payable at Post Office, Covent Garden, W.C. All cheques to be crossed, adding the words "and Co." Small amounts may be paid in Postage Stamps, or coin may be sent in a registered letter.

#### PARCELS POST.

#### SEEDS POST PAID TO ALL PARTS OF THE UNITED KINGDOM.

The Parcels Post offers great facilities in forwarding small packages to families residing a considerable distance from London, or outside the radius of the Railway delivery. We shall in all cases use the Parcels Post when cheapest and the articles ordered weigh under eleven pounds, and admit of being packed for safe transmission by "Parcels Post." In the case of plants and heavy packages we shall send by Rail (see Pars. IX. and X.).

#### NOTICES TO OUR FOREIGN & COLONIAL CORRESPONDENTS.

- XV. To insure attention, orders should be accompanied by a remittance, a draft, or an "order to pay," on a London agent; the remittance being sufficient to cover expense of cases, and also of carriage when the freight is required to be paid in advance.
- XVI. Seeds and bulbs can now be despatched in cases to India at the rate of 1s. per 1b., through the Indian Parcels Post, or by "Eastern Express," through Messrs. Wheatley and Co., at the rate of 9d. per 1b. (up to 60 lbs.). Small quantities of seeds may also be sent by the ordinary mail, in packets of 8 ozs. for 6d.
- XVII. In shipping plants to India, great care is exercised by us in selecting, preparing, and properly packing the same. Still, there are so many contingencies, that we cannot, in any way, hold ourselves responsible for the condition in which plants or bulbs reach their destination.
- XVIII. Our experience in successfully preparing and shipping seeds and plants to India and the Colonies, extends over a long period.

#### DAFFODIL NOTICES.

- XIX. Rev Naming Daffodils.—It is not always possible for us to give the necessary attention to the numerous cut specimens of daffodils that reach us during our busy seed season. Our friends in future will do us a great kindness, if they will send the specimens they wish named to the Daffodil Committee of the Royal Horticultural Society. Information as to dates when the Committee sit, will be furnished by the Secretary of the R. H. S.
- XX. Cut Daffodii Flowers.—In Spring we have had numcrous applications for these, without being able to supply, but now that we have completed the naming and arranging of our splendid collection, we are prepared to send cut specimens correctly named.
  - 25 distinct varieties, 1 flower each, 6s. 12 distinct varieties, 1 flower each, 3s. 6d. 25 155. 9s. 6d. ,,

#### DIVISION I.-COLLECTIONS.

Stocks, Asters, Walldowers, Zinnias, Carnations, Picotees, Antirrhinums, Balsams, Cockscombs, Ipomœas, Convolvuli, Larkspurs, Hollyhocks, Petunias, Phloxes, Popples, Portulacas, Tropæolums, Everlasting Flowers, Gourds, and Grasses, as follows:—

#### DOUBLE STOCKS.

In our Experimental Grounds the following classes of Stocks have proved to be the most distinct and decorative. Being of different heights (the) are admirably adapted to various styles of Gardening. All the varieties are desirable pot-plants, and greatly prized as cut flowers, on account of their fragrance and diversity of colour. To have a continuous succession of bloom, sow at intervals from the beginning of March to the end of May; the first sowings should be made under glass, the later sowings where the plants are to bloom.

```
Large-flowered German Ten-Week Stock, height 1 ft.
  For medium or large-sized beds either of one colour, or assorted colours, this is the best; it is of a compact branching, robust growth, with large plowers, which are produced in great profusion.

  Dwarf Bouquet German Ten-Week Stock, height 3 ft.

For small or medium-sized beds, edgings, and sectional lines, this is a most usefut Stock; it is of a very dwarf,
            compact, neatly branched growth, and flowering so freely that each plant forms an elegant bouquet.

              Covent Garden Intermediate or Spring-Flowering Stock, 1 ft.
 This is a most valuable successional variety. Sown in March or April, it showers in autumn, succeeding the Ten-Week Stock, and continues decorative to the end of the season. This is the Stock sown in July and August by the growers for Covent Garden Market, wintered in cold frames, and used in May and June for furnishing jardinets, window-boxes, slower-beds, etc.

#### ASTERS.

The Aster, when well cultivated, is the most beautifut flower in its season. The Hamburgh Prize Paony Perfection has massive tasselled flowers; the Victoria, large perfectly formed imbricated blossoms; the Cockade has flowers with a large white centre; the Hedgehog is distinguished for its porcupine-quilled petals; the Dwarf Chrysanthemum-flowered covers the foliage with its large beautifut flowers; the Imbrique Pompone is a charming flower for bouquets; and the Dwarf Bouquet Elegantissima has exquisitely neat blossoms, which range from the size of a florin to that of a five ishilling piace, the combination of colours being very striking, white the habit of the plant is neat and compact. The German Emperor Aster is remarkable for its dwarf growth and large flowers, and the Quilled Aster is the one mostly prival by connoisseurs for Flower Shows.

NOT The Aster, when in flower, is by many lifted, potted, and used for conservatory decoration. To maintain a succession of bloom, sow at intervals from the beginning of March to the end of May; the first sowings under glass, the later sowings where the plants are intended to flower.

#### Pæony Perfection Hamburgh Prize Aster, height 11 ft.

This is the highest type of the Paony Section as recognized, by the Royal Horticultural Society. The habit of the plant is excellent: the flowers are remarkable for their fine quality and perfect form, their large size, and rich pure colours. For exhibition purposes these are indispensable, being the finest of the incurved globular

| flowered Asters.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |

| Victoria Large-flowered Aster, height 13 ft.  It is impossible to speak too highly of this magnificently imbricated Aster, the blossoms are large and distinguished by an clegant and regutar overlapping of the petals, thus giving to the flower a distinctive character from the Paony Aster; the growth is an elegant pyramid, and the plant carries from 10 to 20 flowers.                                                                                                                                                                                                                                                                                                                                                                                                                    |

The flowers are small, elegant, and perfect in form; thus for bouquets and table decoration invaluable.  465 Splendid mixed colours, for beds or groups 2 6   466 Splendid mixed, smaller packet                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| Cockade, or Crown Aster, height 2 ft.  The flowers of this section have generally a large white centre, surrounded by a corona of purple, crimson, lavender, or rose, etc., and thus in table bouquets the blossoms are particularly attractive, while in flower beds and borders the diversity is exceedingly pleasing.  2 6   469 Splendid mixed colours, for bods or groups 2 6                                                                                                                                                                                                                                                                                                                                                                                                                 |
| Perfection Large-flowered Hedgehog or Needle Aster, height 1½ ft.  A most beautiful Aster; the flowers are large, handsome, and richly coloured, while the characteristic porcupine-quilled petats distinguish it from all other Asters, thus giving it a special importance for table bouquets.  To Splendid varieties                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| Dwarf Chrysanthemum-flowered Aster, height 10 in.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| This fine Aster grows to the uniform height of 10 inches. Its large flowers are produced so profusely as entirely to hide the foliage; it is the latest flowering Aster, and, therefore, valuable for carrying the succession of flowers to the end of the season.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |

Betteridge's Perfection Quilled German Aster, height 2 ft. The beautifully quilled flowers of this Aster are greatly in demand for table bouquets, and extensively cultivated by those who exhibit Asters at flower shows. 

#### DOUBLE GERMAN WALLFLOWERS.

The importance of the German Wallflower cannot be over-estimated. It has long handsome spikes of deliciously fragrant massive double flowers, and is one of the most effective plants for spring decoration.

#### ZINNIA ELEGANS.

These are splendid summer and autumn-flowering plants, combining richness and diversity of colour with duration and profusion of bloom. The varieties of DOUBLE ZINNIA are remarkable for the large size, symmetry, and beauty of their flowers. The PUMILA or dwarf double varieties have also large, handsome, finely-formed flowers, and are admirably adapted for flower beds or pot-culture. The Darwinii new double varieties are very handsome. ZINNIA HAAGEANA, single and double, are valuable compact dwarf bedding plants.

## COLLECTIONS OF CHOICE CARNATIONS & PICOTEE SEEDS.

Saved in Classes from one of the finest Collections in Europe, yielding a large percentage of double flowers. Carnations and Picotecs are prized for their delicious fragrance and exquisite beauty. As cut flowers, they are much in demand for furnishing flower-baskels and drawing-room bouquels; and for this purpose a reserve piece of ground is usually devoted to their cultivation. Plants raised from seed, flower more profusely, and are more lasting than when propagated, hence the advantage of sowing from the following collections, which have been saved from the classes enumerated, and although the specific colours cannot be relied upon being reproduced, yet there will be a proportion sufficient lo please, while varieties of high merit may be selected as worthy of propagation.

#### CARNATIONS, SECTION I.

The Names of the Four Collections each define a distinct class.

544

A.—SELFS.—One-coloured.—12 superb varieties of 10 seeds each, 4/6; 5 seeds each, 2/6.

The flowers of these possess the delightful perfume of the old and highly prized Clove.

B.—FLAKES.—Two-coloured.—12 superb varieties of 10 seeds each, 4/6; 5 seeds each, 2/6.

The flowers are either striped or flaked with a distinct and brilliant colour.

C.—BIZARES.—Three-coloured.—12 superb varieties of 10 seeds each, 4/6; 5 seeds each, 2/6. 545

C.—BIZARKES.—Three-coloured.—12 superb varieties of 10 seeds each, 4/6; o seeds each, 2/6

The flowers are either striped or flaked with two distinct and brilliant colours.

D.—FANCY.—Parti-coloured.—12 superb varieties of 10 seeds each, 4/6; 5 seeds each, 2/6.

The flowers are either shaded, spotted, or mottled, with rich and peculiar hues.

Choice mixed from the above four Collections, 3/6 and 5/6

#### YELLOW CARNATIONS, SECTION II.

The Colours in these Three Collections are universally admired.

E.—YELLOW FLAKES.—Two-coloured.—12 superb varieties of 10 seeds each, 5/6; 5 seeds each 3/0. The flowers are either yellow or orange, striped or flaked with a distinct colour, as purple, scarlet, etc.

F.—YELLOW BIZARRES AND SELFS.—12 Superb varieties of 10 seeds each, 5/6; 5 seeds each, 3/0.

The flowers of the Bizarres are either yellow or orange, striped with two distinct colours.

G.—YELLOW FANCY.—Parti-coloured.—12 Superb varieties of 10 seeds each, 5/6; 5 seeds each, 3/0.

550

Yellow, exquisitely variegated with every lint of the rainbow. Choice mixed from the above three Collections, 3/6 and 5/6.

#### TREE CARNATIONS, SECTION III.

This Section consists of Four Collections, and the varieties are much sought after for conservatory decoration. The plants can be had in bloom, under glass, from November.

553

H.—SELFS.—One-coloured.—12 fine varieties of 10 seeds each, 4/6; 5 seeds each, 2/6.

I.—FLAKES.—Two-coloured.—12 fine varieties of 10 seeds each, 4/6; 5 seeds each, 2/6

J.—BIZARRES.—Three-coloured, 12 fine varieties of 10 seeds each, 4/6; 5 seeds each, 2/6.

K.—FANCY.—Parti-coloured.—12 fine varieties of 10 seeds each, 4/6; 5 seeds each, 2/6. 554 555

Choice mixed from the above four Collections, 3/6 and 5/6.

#### PICOTEES, SECTION IV.

The Picotee is distinguished from the Carnation by the flowers being elegantly margined or fringed with scarlet, purple, rose, earmine, crimson, vermilion, etc.

L.—WHITE GROUNDS.—12 superb varieties of 10 seeds, 4/6; 5 seeds each, 2/6.
M.—YELLOW GROUNDS.—12 superb varieties of 10 seeds, 5/6; 5 seeds each, 3/0.

Choice mixed from the above two Collections, 3/6 and 5/6

| Eligan and showy summer and astummer and astummer. The Tom Thamb varieties are dwarf, bushy and profuse flowering, wall and sing summer and astummer, or Again to the Month to following year.  5061 12 "WWW.18 miles of the Control of                                                                                                                                                                                                                                                          | 12 and 13, King Street, Covent Garden, 1888.] 9                                                                                                                                                                        |

| CONVOLVULUS MAJOR, OR THE AMERICAN MORNING GLORY.  Whether covering a trellis, a verandah, or rambling amongst the branches of shrubs, or festooning the hedgerows, alone, or with other climbers, such as Tropacium Canariense (Canary Creeper), Clematis, etc., the hedgerows, alone, or with other climbers, such as Tropacium Canariense (Canary Creeper), Clematis, etc., the heavy of Convolvulus Adopts is conspicuous, and the effect of its fresh rich fleasing colours is most charming. In floral walks, pyramids of twiggy faggots, covered with Convolvulus, Sweet Peas, and Canary Creeper intermingled, are grand objects.  The grand available of the convolvulus and the grand of the convolvulus, Sweet Peas, and Canary Creeper intermingled, are grand object.  The grand varieties                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | The Ipomæas are rapid growing climbers with large handsome flowers of rich dazzling colours; unrivalled for                                                                                                            |

| PETUNIAS.  The Petunia in the flower garden is an effective plant, blooming profusely till late in autumn. When planted in large beds it should be trained over a frame-work of boughs; and in the flower borders, supported by twiggy faggots. The Petunia is very telting in effect when trained against rustic fences, espatiers, or walts. It is also invaluable in rustic baskets, on rockwork, or drooping from fissures of rock formations and on old walls.  590 12 Splendid large flowered varieties 36 592 Splendid large-flowered varieties, mixed 26 591 6 , , , , , , , , , , , , , , , , , ,                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | 585 6 ,, ,,                                                                                                                                                                                                            |
| The Petunia in the flower garden is an effective plant, blooming profusely till late in autumn. When planted in large beds it should be trained over a frame-work of boughs; and in the flower borders, supported by twiggy faggots. The Petunia is very telting in effect when trained against rustic fences, espaliers, or walts. It is also invaluable in rustic baskets, on rockwork, or drooping from fissures of rock formations and on olt walls.  590 12 Splendid large flowered varieties                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | 586                                                                                                                                                                                                                    |

Sow Spring and Autumn.  606 10 Splendid varieties  2 0 607 Splendid mixed, sufficient for a large bed I  For Oriental Poppies, Iceland Poppies, Indian Poppies, etc., see Papavers, pages 30, 33, 35.  PORTULACAS.  These flowers are remarkable for the dazzling brilliancy of their colours, and on mounds, raised flower beds, sunny situations, and on gravelly soils, few plants are so effective as Portulacas.  608 8 Splendid single varieties  1 6 610 8 Splendid double varieties  2 6                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |                                                                                                                                                                                                                        |

| PORTULACAS.  These flowers are remarkable for the dazzling brilliancy of their colours, and on mounds, raised flower bads, sunny situations, and on gravelly soils, few plants are so effective as Portulacas.  608 8 Splendid single varieties                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | 606 to Splendid varieties                                                                                                                                                                                              |
| These flowers are remarkable for the dazzling brilliancy of their colours, and on mounds, raised flower bids, sunny situations, and on gravelly soils, few plants are so effective as Portulacas.  608 8 Splendid single varieties                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |                                                                                                                                                                                                                        |

| DIVISION II.  ORNAMENTAL GOURDS.  Decorative on arches, effective in beds, and the ripe fruit in winter much prized for decorating charge.                                                                                                                                                                                                                                                                                                             | hac                         |         |

These are Picturesque, Curious, Interesting, and Beautiful, when grown on Mounds, Sloping Banks, trained over Arches, or planted in Beds for distinct effects. Last summer in the Royal Gardens, Kew, a Collection of our Gourds were grown in beds cut in the grass. In the summer of this year there will be a special "Gourd Garden," at Kew, and those interested in this class of decorative gardening should visit this Gourd Garden in August and September. The Plants can be raised under class in April or the scale planted in Meyor the state of the second such as a special of the second summer of the second such as a special "Gourd Garden in August and September." tember. The Plants can be raised under glass in April, or the seeds planted in May, where intended to be decorative.

The fruits, when ripe, make the most elegant of all ornaments for church decoration in harvest festivals, and in winter are unsurpassed for hall ornaments.

HYACINTHUS CANDICANS (THE GREAT SNOW-WHITE SUMMER-FLOWERING HYACINTH).
       This is perhaps the most ornamental of summer-flowering hardy bulbs; it attains a height of 3 to 6 feet,
surmounted with 20 to 50 graceful pendant bell-shaped snow-white flowers, and is as decorative for the flower border, as it is for the conservatory. Flowering bulbs, per 100, 15/ & 21/; per doz., 2/6 & 3/6.
                                                                                                                    A few extra large bulbs, per doz., 4/6
No flower is more gorgeously coloured than the Tigridia. The petlas are self-coloured, while the petaloid stigmas, and the cup of the flower, are superbly tiger-spotted, producing a remarkable contrast between the lower, and the upper part of the flower. The individual flower of a Tigridia lasts one day, but from the same scape comes a series of blossoms continually replacing each other, and thus maintaining a succession for a long time. Plant March Aril March are Lung for late supers and thus maintaining a succession for a
long time. Plant March, April, May, or June for late summer and autumn-blooming. cach—s.

725 Grandiflora conchifiora, yellow, cup spotted scarlet, flowers very large, I ft., p. 100, 21/; p. doz., 3/6 o

726 Grandiflora rubra, rich scarlet, cup spotted crimson on a yellow ground, flowers very large,
                                                                                                                                                          each-s. d.

#### DIVISION IV.

#### BARR AND SON'S ASSORTMENTS OF FLOWER SEEDS.

These assortments consist of the most beautiful and effective flowers, best adapted for the purposes indicated. Those unacquainted with the names of the various flower seeds, should order from the undermentioned selections, and they will be supplied with the best kinds of seeds for maintaining throughout the summer and autumn months, a succession of flowers. Those acquainted with the names of flower seeds should make their own selection from the general list.

      GERANIUM (PELARGONIUM), Nat. Ord. Gerania'ceæ. Half-hardy bedding plants.
The greatest attention has been, and still continues to be given to the improvement of the Scarlet Geranium. To the amateur purchasing seed it is of the first importance to make sure what the chances are of having really fine howers. To this end we have had seed collected from the very best named kinds. Plants raised from seed sown early in spring are decorative in summer.

1684
                 LOBETIA, Nat. Ord. Lobelia'cea. Beautiful half-hardy annuals, etc.
LUBE'DIA, Nat. Ord. Lobelia'ceæ. Beautiful half-hardy annuals, etc.

Gems of the flower garden. The Erinus varieties of Lobelia are indispensable for beds and ribbons; and
amongst these, the varieties of Pumila, with their compact, tufty growth, are very attractive. Ramosa
and Queen of Whites are distinguished for their large flowers and branching habit. No plant in
the flower garden is more usefut than the blue Lobelia speciosa, or required for so great a variety of
purposes. As an edging the Lobelia is unsurpassed, while in front lines and ribbons no plant is more
effective. Intermingled in small beds with the Variegated Alyssum, Cerastium, or White-leaved
Centaurea, the contrast of the blue Lobelia is very beautiful; but when associated with the Silver-
leaved Grass (Dactylis elegantissima), the effect is chasteness to perfection. Seeing the importance
therefore attached to this plant, it is very desirable to have seed from a bure and a good stock.
```

therefore attached to this plant, it is very desirable to have seed from a pure and a good stock.

MELIAN'THUS, Nat. Ord. Zygophylla'ceæ. Sub-tropical perennial.

1786 Meltan'thus ma'jor, a handsome sub-tropical plant, with beautiful pinnate foliage. A flower border is incomplete without this fine-foliaged plant. Λ good conservatory plant, 3 to 6 ft...6d. & r
             MECONO'PSIS, Nat. Ord. Papavera'cea. Grand Indian Poppies, hardy biennials.
 The most distinct and stately of all Poppies are these species of Meconopsis. The radical leaves, which are abundant, have a dense golden hairy surface, so that the plants are ornamental both summer and winter. In summer, from the midst of this rosette of handsome leaves, rises a stout pyramidal flower stem, 4 to 5 feet high, clothed with brownish green leaves, and covered with handsome saucer-shaped flowers.
 1787 Mecono'psis nepal'ense (The Sulphur-coloured Indian Poppy), radical leaves abundant, and with
                                          a golden hairy surface, decorative summer and winter, 4 ft.

Wallich'i (The Blue Indian Poppy), the radical leaves abundant, and with a golden hairy surface, decorative summer and winter, 4 ft.
                                                                                                                                                                                                                                                  6

 1796 Michaux'ia campanuloi'des, large white Passion-flower-like blossoms produced in profusion, 3 ft... o 6
                     MIGNONETTE (Reseda odorata), Nat. Ord. Resedu'ceæ. Hardy annuals.
Seed of this universal favourite should be scattered liberally in flower and shrubbery borders, also on dry banks, old walls, and in sunny situations, such for instance as the margins of gravel paths close under the windows. The varieties enumerated are all delightfully fragrant, but differ in shade of colour or habit of growth. The finest for pot-culture are the new varieties, Covent Garden Favourite, Miles Spiral, Victoria Crimson, Covent Garden Dwarf Crimson, Golden Queen, Parsons White Tree, and "Machel."
6
                                                                                                                                                                                                                                                   6

  MIMO'SA (Sensitive Plant), Nat. Ord. Legumino'sæ. Curious greenhouse annual.

1806 Mimo'sa pudi'ca, so sensitive are the leaves of this plant, that if touched, they instantly fold up:
                                   it grows freely in the conservatory or sitting-room, also in warm sheltered situations out of doors in summer; plants are easily raised from seed, and are very soon ornamental, 2 ft...... o 6
 MIM'ULUS (Monkey-flower), Nat. Ord. Scrophularia'ccæ. Beautiful perennials.

Splendid conservatory and sitting-room plants, with singularly shaped and brilliantly coloured flowers, distinguished by their rich hieroglyphic with markings. CWhen cultivated indoors they succeed best if the pots are placed in saucers of water. Raised in heat, seedlings flower in a few weeks, and if planted in the open ground they are very effective, and they are admirably suited for growing in shady, damp, and marshy situations, or by the sides
  of lakes, etc.

                        MUSK-PLANT, Nat. Ord. Scrophularia'cca. A favourite hardy perennial.
  MY080'TIS (Forget-me-not), Nat. Ord. Boragina'cew. Hardy perennials.

For spring gardening M. sylvatica and M. dissitifora are by far the best; Sylvatica we recommend where great quantities are planted; Dissitifora for select beds, and sheltered situations, and where a very early effect is necessary. Palustris semperforens is in flower throughout the summer, thus furnishing a constant supply of flowers for bouquets, especially if grown in damp and shady situations. All the Forget-me-nots potted up in autumn are valuable for winter and spring-flowering under glass.

OXLIP, Nat. Ord. Primula'ceæ. Hardy perennials.

Those who delight in possessing the old fashioned English flowers will doubtless await themselves of the seeds offered, as they are almost certain to find amongst the seedlings many of the curious varieties which were greatly prized centuries ago, such as "Gallegaskins," "Jacke-an-Apes on Horse Back," etc.

PETUNIA, Nat. Ord. Solana'ceæ. Splendid half-bardy perennials.

When grown in large beds hooped ver, and the plants trained to the hoops, the effect produced is splendid. Trained on trellises, or against rustic fences, the effect is grand. Planted on old walts, in old stumps of trees, rustic baskets, or fissures in rock formations, and allowed to droop over, they are matchless. On rockwork and among old roots and ruins the effect is beautiful. As a pot plant and for hanging baskets, valuable, continuing in beauty till very late in autumn. Sown in March and April they commence flowering in June and July.

PHLOX, Nat. Ord. Polemonia'ceæ. Half-hardy annuals, etc.

Superb plants, with richly-coloured flowers of many hues, exceedingly effective in beds, pots, and rockwork, also in rustic baskets, and as drooping plants. The new large-flowered varieties of Phlox Drummondii are very handsome, and the Nana varieties are fine dwarf plants for pot-culture and small beds, edging, etc.

 RICINUS, Nat. Ord. Euphorbia'ceæ. Highly ornamental foliage plants.

Picturesque, umbrageous, elegant foliage plants, which in autumn are studded with grotesque fruit. As specimens on the lawn or terrace they are unsurpassed, and for the Sub-tropical garden indispensable. In strubbery borders, and by the sides of ravines, rivulets, and lakes, they have a majestic appearance possessed by few, if any other plant. From seed they speedily attain gigantic proportions, and are ornamental till destroyed by frost.

2114 Ri'cinus Bordonen'sis arbo'reus, large handsome ornamental foliage, 5 ft.

Cœrules'cens, a distinct, large-leaved variety, with bluish green fruit, 5 ft. o 6

The Tritoma has long spikes of bright flume-scarlet dowers. Glaucescens is in flower throughout the ter; Grandis continues the succession to Christmas. In shrubberies and for naturalization, the tic effect of these plants is unsurpassed. It is more satisfactory to purchase plants of Tritoma Glaucescens trandis than to raise them from seed; they are inexpensive, per doz.7s. 6d, and 10s. 6d.; each 1s. & 1/6.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | 6                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |

In the spring flower garden the Pansy (Viola Iricolor) bluoms continuously, and produces a matchless effect in designs, beds, and ribbons. From seed the colours cannot be implicitly depended upon; they should, therefore, be transplanted from the seed-bed and flowered before finally planting out. Seed sown in spring, flowers during the summer; sown in summer, flowers in autumn. With a little attention, the Pansy is a charming plant for summer decoration. The varieties of Viola are very important, as they succeed in situations where the Pansy is a failure. Viola odorata flowers during winter and spring, and is prized for its fragrance.

## TROPE'OLUM, Nat. Ord. Tropeola'cee. Half-hardy annual and perennial climbers.

The varieties of T. Lobbia him are exceedingly elegant, and remarkable for their richly diversified colours and profusion of bloom, being equally adapted for in or out-door decoration. In the flower garden, when pegged down, they are very effective bedding plants, and very graceful growing over rustic baskets, rock formations, etc., or trained over trellises, chains, pillars, walls, etc. The new varieties, Cardinal and Crown Prince of Prussia, have finely-formed flowers, and are specially recommended for indoor-culture, as during winter and spring they keep the conservatory gay, supplying a large quantity of cut flowers. The seed from the self-colours usually comes true, but parti-coloured varieties sport very much. T. Canariense, the Canary Creeper, with its beautifully fringed rich yellow flowers and pretty foliage is universally known and admired as a fine climber. T. I arattic is a beautiful greenhouse plant. T. pentaphyllum is in the style of Jarattii, but hardy, succeeding out of doors in warm situations and in light soils. T. Speciosum is a charming hardy species.

|      |            | ct-growing bedding Tropæolums are described under the heading Nasturtium, on $p_{c,3}$       | 31. |

MIXED FLOWER SEEDS FOR NATURALIZATION. For Scattering in large Shrubberies, Woodland Walks, Railway Embankments, decoration of Wildernesses and where there is a desire to naturalize flowers, 4s. 6d. per pound, or 6d. per ounce. (The mixture is quite unsuitable to sow in the flower garden.)

Many have availed themselves of the above suggestion, and have scattered our Mixed Flower Seeds on rough

Many have availed themselves of the above suggestion, and have scattered our Mixed Flower Seeds on foligh rockeries and rooteries, natural and artificial; in shrubberies, woodland walks, and wildernesses; also, by the sides of rivulets, railway embankments, moors, heaths, and wherever it is desired to naturalize flowers.

For a Summer and Autumn Display, sow during March, April, and May, at the rate of six or seven pounds per acre, and slightly cover the seed, then tread or roll the ground. The seed should not be scattered amongst long grass, but in such places patches here and there should be cleared and the seed deposited, then rolling or trampling it into the soil. For a Spring and Early Summer display sow in August, September, and October.

ORNAMENTAL GRASSES FOR WOODLAND WALKS, &c.

Extra Fine Selections

B. and S. test the growth of all Vegetable Seeds immediately they are received from the growers.

#### SON'S COLLECTIONS OF VEGETABLE SEEDS. BARR &

These assortments consist of judicious selections from the different sections of the Catalogue, suited to gardens of various sizes; they contain the most approved varietics, and such as are best adapted to secure a succession of best vegetables from January to December. However, as the wants of families are so varied, it may be more advantageous for purchasers to order from the body of the Catalogue the quantities and sorts best suited to their requirements, using the Order Sheet which accompanies the Catalogue for this year. In the Order Sheet the names are printed consecutively as they appear in the Catalogue, so that it is only necessary to fill in the quantity of each article required.—Cultural Directions are printed on every Packet of Seed.

#### COLLECTIONS OF SEEDS FOR ONE YEAR'S SUPPLY.

Any of our customers having a preference for collections arranged by any other London or large provincial house, may have the same made up by us at the prices and conditions of the advertiser.

THE LONDON MARKET GARDENS. This work gives information how Flowers, Fruits, and Vegetables are grown for the supply of Covent Garden Market, 1s. 6d.; by post, 1s. 8d. QUIN'S GARDEN RECEIPTS. A collection of recipes for the eradication of garden pests, etc. 1s. 6d.; by

post, 1s. 8d.

ROBINSON'S ASPARAGUS CULTURE. Recommended specially to amateur gardeners, by post, 1s.

EARLY'S BOOK ON MUSHROOM CULTURE. 15; by post, 15.1d.

THE DAFFODIL: its History, Culture, Hybridization, etc. By F. W. B. and P. B. Price 15.

Barr's Flower and Fruit Conveyance Boxes. These are made in varioussizes, of strong tin japanned, brown, the lower half divided into three compartments for fruit or early vegetables, and the upper half fitted with a tray for cut flowers. No. 1, 14 in., 10 in., 8 in., 22/6; No. 2, 18 in., 13 in., 10 in., 40/; No. 3, 23 in., 16 in., 14 in., 50/. Lock and two keys.

Watson's Weed-destroying Lawn Sand, kills daisies, dandelions, plantains, &c., on lawns, croquet grounds,

&c. Particulars on application. Sample Canisters, 2/6 and 5/6; per \( \frac{1}{4} \) cwt., 9/6; \( \frac{1}{2} \) cwt., 18/; \( \text{r cwt.}, 34/)

B. and S. test the growth of all Vegetable Seeds immediately they are received from the growers.

#### SELECT LIST OF VEGETABLE SEEDS.

ARRANGED AND CLASSIFIED ON A NEW PRINCIPLE, AND EMBRACING ALL THE BEST VARIETIES OF VEGETABLES IN CULTIVATION.

#### PARCELS POST, SEEDS POST FREE TO ALL PARTS OF THE UNITED KINGDOM.

The Parcels Post offers great facilities in forwarding small packages, especially to families residing outside the radius of the Railway delivery. We shall in all cases use the Parcels Post when cheapest, and the articles ordered weigh under eleven pounds, and admit of being packed for safe transmission by "Parcels Post." In the case of plants and heavy packages we shall, as hitherto, send by Rail. See Special Notices, page 2.

CULTURAL DIRECTIONS ARE PRINTED UPON EVERY PARCEL OF SEED.

#### PEAS.

The arrangement and descriptive matter following are the results of personal observations at our Experimental Grounds, and at the Chiswick Gardens of the Royal Horticultural Society.

All new Peas, or old Peas with new names, which are not guoted by us, can be supplied at advertised prices. The varieties of Peas, and also other vegetable seeds which we enumerate and describe, are the best representatives of their classes. We mention this as, in our present edition, we have only described the varieties most worthy of cultivation. (All inferior sorts of Peas have been excluded from this list.) Division I,-THE EARLIEST ROUND SEEDED PEAS.

| If sown from November to February, will be ready to gather in May and June. per quart.                   | —3. | đ. |

| Under this heading, we enumerate a few sorts of Runners deserving of special attention. An would specially notice the Butter Beans, the pods have no membraneous inside lining; they are cook whole, making a very delicate dish.  Butter Bean, Haricot d'Algiers, wax-podded.  Butter Bean, Mont d'Or, the pods of this valuable variety are 6 to 8 inches long, thick, ficshy, of lenion colour, and produced very abundantly.  Transylvanian Butter Bean, a valuable acquisition to the stringless section of Runner Beans, pod broad, fleshy, 8 to 10 inches long, in good condition from August till destroyed by frost. Champion Scarlet Runner, pods very long, thick and ficshy, an exceedingly fine variety per Girtford Giant Scarlet Runner (Laxton), the pods are borne in clusters, and surpass all ot length, breadth, thickness, and flavour | per p<br>a pa<br>per p<br>s gree<br>per p                                  | int sale int | rved d. 3 3                 |
| Eclipse, or Giant White, very long pods, produced in clusters, and in great abundance Scarlet, exceedingly prolific                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | per qu                                                                     | art,—s,                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | d.                          |

| Asparagus Rale (True), early in spring this plant throws out long stout succulent shoots, which are gathered when young and tender. At this stage the plant may be covered for a few days before cutting, to blaneh the shoots, when they become white, like French Asparagus Paragon Giant Parsley-Curled, this is the most beautifully curled of all Kales; leaves dark green, resembling the most perfectly curled parsley; height 3 feet, with a profusion of sprouts from top to bottom of stem; in use throughout the winter and spring months.                                                                                                                                                                                                                                                                                                       |                                                                            |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |                             |

#### Section III. - EDIBLE-ROOTED PLANTS.

#### BEET.

For Illustrated Report of Beets grown at our Experimental Grounds, see "Gardeners' Magazine," 1870.

In the process of cooking, Beet is frequently made hard and unedible, and the seedsman or gardener made to bear the consequences of the cook's shortcomings. Following up our experimental trials, we have looked into the cook's department, and offer to our readers the following conclusions:—

1 In preparing Beet for cooking, the greatest care must be taken not to bruise the skin, or in any way wound the root; and if by accident any injury has been done to the root, bake and not boil it.

2. If a deep crimson hue is the colour preferred in the Beet, or a firm flesh, this is best attained by baking.

3. If a light, clear bright colour is desired, or a soft, juicy flesh, then boiling will secure this.

per pkt. per os.

Barr'e Selected Compact-topped Pine Apple, crimson flesh, beautifully shaped roots, of uniform size and colour; it boils tender, and is of a fine flavour. A pure stock of the true Pine Apple Beet, as originally sent out, and the very best for early-sowing

Nutting's Dwarf Red (Barr's Selection), purple flesh, a pure stock, with roots of a medium size, and surpassing all others for rich flavour. The best for sowing from the middle of May....

Barr'e Green Top, roots of a medium size, and rich purple-crimson flesh, boils tender, with a fine rich flavour, recommended with the fullest confidence as sure to give satisfaction

Dell'e Crimson leaved Beet, purple flesh, leaves rich dark crimson, compact and upright, slightly arched, and of a uniform medium height; in the Flower Garden it is more effective than Perilla, and is also a first-rate table beet

Perfection of Beete (Carter), purple flesh, leaves rich metallic crimson, gracefully arched, uniform in height, a fine variety for the flower-garden, and excellent for table use

Omega Dwarf Topped (Cooling), medium in size, handsome in shape, and of a rich crimson flesh, which is delicately sweet.

Pragnell's Exhibition, very handsome smooth medium sized root, flesh rich deep crimson 0 4.. 0 9 0 4...0 10 1 0...2 6 6...1 6 6,.,1 6 6...I 6 Pragnell's Exhibition, very handsome smooth medium sized root, flesh rich deep crimson

Nonparell Dwarf Green Top (new), scarlet flesh, very dwarf, roots small and well formed

White's Black, very deep crimson flesh, roots large; a fine sort for those who prefer a large beet.... 0... ... 0... 4...0 8 Turnip-shaped Dark Red Egyptian, rich in colour and delicate in flavour, valuable for shallow soils 4...0 10 3...0 6 ..... 6...x o

#### ONION.

The Fruit Committee of the Royal Horticultural Society awarded to us in 1869 a special certificate for the largest and finest Collection of Onions ever exhibited before them. A report of these at the period will be found in the "Gardeners' Chronicle" and the "Journal of Horticulture." In the "Gardeners' Weekly Magazine," in connection with the report, will be found illustrations of the different types of Onions, from specimens supplied by us, and grown at our Experimental Grounds.

In our re-arranged list of Onions, we have placed the allied varieties under their respective heads; this we have will be found serviceable to our contourners in selecting. The first and second grows represent the Election.

we hope will be found serviceable to our customers in selecting. The first and second groups represent the Flat Onious; the third the Globe-shaped; the fourth the Italian Onions; the fifth the Silver or White Skinned Onions. The fourth and fifth groups are generally sown in Autumn for Spring and early Summer use; if sown in Spring they should be used early in the Autumn.

| 12 and 13, King Street, Covent Garden, 1888.] 53                                                                                                                                                                                                                                                                 |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |                                         |                                               |

| The number of fine varieties of Potatoes is so great, it has become a very serious matter what so recommend our customers to grow. With the able assistance of our friend, Mr. Peter McKinlay (whose amongst potato growers is a household word, and whose extensive knowledge of every known variety, and sound judgment on the individual merits of Potatoes no one would think of questioning) we passed in revit the sorts worthy of consideration, and made such a selection as, we have no hesitation in saying, is per unique, inasmuch as each sort offered possesses all the qualities to be desired in a Potato, viz., handsome eye, agreeable to the palate, and an abundant eropper. We may add, most of the varieties are from a factor of the seed farm, and this alone is a high recommendation, as it guarantees a thorough change, an pensable condition to good potato culture; no practice is so disadvantageous as that of growing from homesteed, year after year.  Adirondack, a rosy-skinned, handsome, round, main-crop variety, of great excellence, both as to cropping and cooking qualities.  ———————————————————————————————————                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | man<br>who<br>ew a<br>feet<br>to the<br>indi<br>save<br>s. | ne ose all ly he us s-ed d.             |

CHIVES, TARRAGON, POT ANO SWEET HERBS, 8d. per bunch, 6s. per dozen hunches.

GARLIC, per lb., 1s.; SHALLOTS, per lb., 1s.; UNDER-GROUNO OR POTATO ONIONS, per lb., 6d.

MUSHROOM SPAWN, of very superior quality, 16 bricks, 6s.; 4 bricks, 1s. 8d.; per brick, 9d. (EARLY'S BOOK ON MUSHROOM CULTURE, 1s.)

RHUBARB ROOTS, Prince Albert, Linnæus, Victoria, and other varieties.—Strong, 9d. each; 7s. 6d. per dozen.

RHUBARB ROOTS, Johnston's St. Martin's. This is one of the earliest and finest Rhubarbs. The flavour is superior, and less sugar is required than for the Victoria. Each 1s., per dozen 10s. 6d.

RHUBARB ROOTS, "The Monarch." This fine rich apple-flavoured Rhubarb surpasses all others hitherto introduced for excellence in quality, and abundance in produce. It was raised by Mr. Stott, Market Gardener, Alnwick. The plant is unusually dwarf, and the stalk remarkably thick, the flesh of which, when cooked, is of a fine green colour. Each, 1s.; per dozen, 10s. 6d. See Gardeners' Chronicle, May 31 and June 14, 1879.

RHUBARB ROOTS, KERSHAW'S EARLY PARAGON. This new variety is described as the earliest of all Rhubarbs, the reddest, and most productive, per dozen 10s. 6d., each 1s.

RHUBARB ROOTS, HAWKES' CHAMPAGNE. Mr. Gilbert describes this fine variety as the earliest and finest red Rhubarb he has ever grown. In the Rhubarb trial at Chiswick, the Royal Horticultural Society placed this variety first, per dozen 10s. 6d., each 1s.

this variety first, per dozen 10s. 6d., cach 1s.

## DIVISION X.

GRASSES, ETC.

FOR LAWNS, CROQUET AND CRICKET GROUNDS, PUBLIC PARKS, PLEASURE GROUNDS, ETC. The following Grasses are all thoroughly cleaned, and cannot fail to give the greatest satisfaction. There is no clover or coarse grasses in the mixture, and it is sold by weight only, with the estimated quantity per acre stated.

In sowing grass sced, always take advantage of rainy weather, or when the carth is damp, and after sowing give a slight covering of clean soil; this followed by rolling, at every favourable opportunity, will ensure a

successful vegetation

No. 1. Thames Embankment Lawn Grasses. This special mixture has been very successful on the Thames Embankment, and the various public and private parks and squares, around London. It is well adapted for renovating or forming new pleasure grounds, Ornamental Parks, People's Parks, etc., in large towns, and for enclosures, such as Squares, in and about London, and other populous cities. 60 pounds per acre if the ground is required to be covered quickly; and for renovating, 20 to 30 pounds per acre, per lb., 1/3; per 10 lbs., 12/0; per 20 lbs., 22/6; per 56 lbs. and upwards, at the rate of 1/1 per lb.

No. 2. Fine Lawn Grass Mixture for Improving Old Lawns or Laying Down Nsw Onss, Croquet Grounds,

No. 2. Fine Lawin Grass Mixture for Improving Old Lawins or Laying Down New Ones, Croquet Grounds, and Bowling Greens. In this mixture there is a larger quantity of small grasses than in No. 1, 70 lbs. is, therefore, required per acre if the ground is required to be covered quickly; and for renovating, 20 to 35 lbs. per acre, per lb., 1/4; per 10 lbs., 12/9; per 20 lbs., 24/6; per 56 lbs. and upwards, 1/2 per lb. No. 3. Extra fine Lawin Grass Mixture for Improving Old Lawins, or Laying Down New Ones, Croquet Grounds, and Bowling Greens; this is a specially fine mixture of dwarf growing grasses only, which make a finer, closer, and smoother turf, and does not require to be so often moved as Nos. 1 and 2; it is specially adapted for scleet lawing 1/8 per lb.; per 10 lbs. 20/6, per college. Per fell to per college.

make a finer, closer, and smoother turt, and does not require to be so often mowed as Nos. I and 2; it is specially adapted for sclect lawns. 1/8 per lb.; per 10 lbs., 15/6; per 20 lbs., 30/; per 56 lbs. and upwards, 1/5 per lb. 70 lbs. per acre if the ground is required to be covered quickly.

No. 4. Hunter's Now Mixture of Dwarf Growing Grasses, specially recommended, when an extrafine, smooth lawn is required; the grasses are of the finest leaved kinds, and dwarfest growers, so that in using this seed a great saving is effected in moving, besides having a perfect lawn, per lb., 2/; per 10 lbs., 19/; per 20 lbs., 37/; per 56 lbs. and upwards, 1/9 per lb. 80 lbs. per acre if the ground is required to be covered quickly.

Dutch Clover, Finest White (no Clover is inclinded in above mixture of Grasses, as we consider a lawn should consist of grass alone, when it is possible; but there are circumstances that necessitate clover, and in such eases it should be sown separately from the grass seed, at the rate of 3 to 5 lbs. per acre), per lb., 1/6.

cases it should be sown separately from the grass seed, at the rate of 3 to 5 lbs. per acre), per lb., 1/6.

Watson's Weed-destroying Lawn-Sand, will daisies, dandelions, plantains, etc., on Lawns, Croquet Grounds, etc. The Weed-destroying Lawn Sand is also a good fertilizer, quickly imparting to the Grass a rich emerald-green colour. It is highly spoken of by those who have used it, and the best testimony we can offer of its appreciation, is the increasing annual demand. Fuller particulars regarding the value of the Weed-destroying Lawn Sand, are given in Circular, with testimonials. Price in London for sample canisters, 2/6 and 5/6; per \(\frac{1}{2}\) cwt. 18/; 1 cwt. 34/.

# www.libtool AGRICULTURAL SEEDS.

Permanent Pasture Grasses in Mixturs, specially cleaned and expressly selected to suit the particular soils as required—heavy, medium, or light soils, meadows, or pastures, sufficient for an acre, 30s.; superior mixture, 35s. The quantity we supply per acre is 26 lbs. light seeds, and 10 lbs, heavy seeds. If seed for 10 or more acres be ordered a reduction of 10 per cent. will be allowed for cash payment. MARKET PRICES.

## TOBACCO CULTURE IN THE UNITED KINGDOM.

Sow under glass, March and April.

This prospective industry is an economic question of considerable importance, not to the agriculturist alone, It is prospective industry is an economic question of considerable importance, not to the agriculturist alone, but to the country at large, in as much as what lessens our imports increases our national wealth. The growth of Tobacco, to a certain extent, is experimental, in the United Kingdom, although long ago, it was tried in Ireland, and considered a success; further, it is well known that many gardeners rear tobacco, for fumigating purposes; the question to be solved, can it be grown year after year as a profitable crop, that can readily be sold to manufacturers, who will do the curing, so that small growers may not have to incur the expenses of Drying Houses. We have the authority of eminent agriculturists, in favour of tobacco culture; thus we are now face to face with the question of the varieties best adapted to this climate, and most useful to manufacturers. In the following list we submit a few sorts, imported from the United States as most likely to meet the turers. In the following list we submit a few sorts, imported from the United States, as most likely to meet the requirements of climate and commerce.

The seed is offered in packets, but quotations can be given by weight, to those who desire to grow large breadths.

The seeds will be sent out in packets, with cultural directions. per pkt.

0 of soil and climate, a fine yellow variety

Ysllow Oronoko. Has been in cultivation for over fifty years, and is still considered one of the best sorts 6d. & Hyco. A desirable variety of fine texture and good flavour. Cures yellow

Yellow Pryor. A valuable sort which has been already successfully tested in England with good success

6d. &

## DIVISION XI.

## HELLEBORUS OR CHRISTMAS AND LENTEN ROSES.

The Christmas and Lenten Roses are Winter-flowering plants, covered with blossoms, at a period of the year when plants in flower out of doors, are a rarity. In the family there is great variety, both in the flower and foliage. On rockwork, and in flower-borders, established plants are highly decorative, covered as they are with blossoms at a time, when outdoor flowers are much appreciated.

From the *H. orientaliis* group have originated some beautiful sorts, and the new varieties of this section of Lenten Roses, which are detailed and described in our Autumn Bulb Catalogue, are very important additions, which will be found highly decorative in the flower garden, or cultivated in pots for greenhouse decoration.

The Christmas and Lenten Roses make good pot-plants, and are well worth the attention of gardeners to grow into large specimens, for Conservatory decoration.

## HERBACEOUS HARDY JUNE-FLOWERING CHINESE DOUBLE PÆONIAS.

(Varieties of Albiflora.)

These noble plants compete favourably in general effect with the finest hybrid Rhododendrons, whether is be in variety of tint, diversity of colour, profusion or duration of bloom. With these qualities, combined to a handsome, massive foliage, accommodating habit, and easy culture, you have a plant to occupy the place of, or to associate with, the Rhododendron. These Paronias succeed in any ordinary garden soil, and are equally adapted to intermingle with shrubs, or to take their place amongst herbaccous plants, in flower borders and wild gardens, or for large beds cut in the grass, and associated with Lilies and Gladiolus, and the beds edged with Plantain Lilies (Funkias).

CULTURE.—Trench the ground before planting, as deeply as possible, adding abundance of rotten manufactor and then mulch the surface with manure. In Summer, if convenient, give a plentiful supply of liquid manure twice a week to encourage a rapid development, as the plant is decorative in proportion to its size. The Pacony may be planted in any position, but, considering that the flower buds are formed early in Spring, it is preferable to grow the plants where the sun's rays do not fall upon them in Spring earlier than 11 or 12 o'clock.

## HERBACEOUS HARDY EUROPEAN DOUBLE PÆONIAS (Varieties of Officinalis), May-flowering.

The Peconias enumerated under this heading are very old inhabitants of our gardens, but at the present day not so generally known as their merits deserve. The grand double Peconias from China, rich and magnified at they are, have not a representative amongst them that will compare in brilliancy, with the old double red Pecony, which, during the month of May, has for three centuries and more enriched English gardens. Cultural treatment the same as for the Chinese Paonias.

HERBACEOUS HARDY SPECIES AND VARIETIES OF SINGLE PEONIAS (May & June-flowering). The species and varieties of Single Peonias, offered in the following Selections, are new to gardens, although not new introductions, and we recommend them as fine border plants, possessing considerable character and diversity, in foliage, and habit of growth; some are tall with a fine bold outline, others are dwarf and bushy, some have very large poppy-like flowers, others, with flowers not unlike water lilies, while others, again, have comparatively small flowers. On the whole, a more interesting class of plants for flower border decoration, it would be difficult to find. Cultural treatment same as for Chinese Paonias.

#### THE LILIUM.

The Lily is matchless amongst hardy plants for variety of colour, chasteness, and beauty of form. It commences flowering in May, and maintains a continuous unrocken succession of bloom, from species of different countries, till the frosts of autumn destroy the last unexpanded flower buds; thus it is unequalled for its successional display, and is an important plant to associate in beds with Rhododendrons, Pæonias, Double Pyrethrums, and Herbaceous plants.

Pyrethrums, and Herbaceous plants.

CULTURE OUT OF DOORS.—In its native habitat the Lily is usually found growing amongst brushwood or long grass, in soils of varied texture, but always sweet and well drained; so that, in choosing a situation for planting, perfect drainage, natural or artificial, should be the first consideration. The borders of Rhododendron and Azalea beds are generally suitable for Lily culture, as the necessary compost for the particular species can easily be given, and the shelter from the surrounding branches is beneficial in protecting the plants in spring, and affording a partial shelter from the sun's rays in summer; amongst dwarf shrubs, or herbaceous plants, and in the proximity of trees, the Lily makes the most satisfactory growth, if care is taken that there is always sufficient exposure so that the plants do not make a leeble growth. In the preparation of ground for Lilies, loosen the soil to a depth of several feet, and add fresh loam, coarse sand, good peat, or sweet decomposed leaf soil, care being taken that the soils are free as possible from insect life, and the compost sufficiently friable not to cling to the bulb. Plant the bulbs 6 inches deep, and if all things are equal they may remain undisturbed for many years. The bog or swamp-loving Lilies, Superbum, Canadense, and the varieties of Pardalinum succeed best in pure loam or a moist peaty soil. Rockwork and artificial mounds, such as may be seen in the Edinburgh best in pure loam or a moist peaty soil. Rockwork and artificial mounds, such as may be seen in the Edinburgh Botanic Gardens, are admirable for lilies, there being sufficient choice of aspects, soil, and drainage—thus the majestic bog-loving lilies would occupy the base with marsh plants, and the other species such positions as are best suited to them.

CULTURE IN-DOORS.—When grown in pots, the Lily should have a compost of fibry loam and good peat, with plenty of sand, or sweet leaf soil and loam with sand, the bulb potted firmly, and the top covered at least two inches; this done, plunge the pots in ashes out of doors on the north side of a wall or hedge, and there let the Lilies remain till they spear through the ashes, or, still better, till the flower buds are formed; at this stage remove to the conservatory, corridor, or sitting-room. Lilies in pots, when removed from the ashes, should have clear liquid manure twice a week. The drainage of the pots must be good, and no stagnant moisture tolerated in the plunging ground. Superbum, Canadense, and the varieties of Pardalinum, prefer fine loam or moist sandy peat.

Lilium auratum, (The White Gold-Banded and Crimson-spotted Lily of Japan) flowsring roots of various sizes, 9/-, 12/-, 18/-, 21/-, and 30/- per dozen. This is the finest and most stately of Lilies. It is perfectly hardy, and equally adapted for the flower garden, and the conservatory. For planting large beds, we supply strong roots, 63/-, 84/-, and 105/ per 100.

Illium Auratum, var. Platyphyllum. This is undoubedly the largest and handsomest of all lilies, the petals are of great substrated when petals are of great substrated when we have the petals are of great substrated.

lilies, the petals are of great substance, very broad, overlap each other, and are beautifully spotted; the diameter of the flower is about 12 inches (bulbs very large), each 10s. 6d.

## HYACINTHUS CANDICANS.

## THE GREAT SNOW-WHITE SUMMER-FLOWERING HYACINTH.

2685 Hyacinthus Candicans is perhaps the most ornamental of summer-flowering hardy bulbs; it attains a height of 3 to 6 feet, according to soil and situation, and is surmounted with 20 to 50 graceful pendant pure white belt-shaped flowers. It is equally decorative for the flower border and conservatory. Figured in The Garden, 1881. Flowering bulbs, per 100, 15/- & 21/per doz., 2/6 & 3/6; each, 4d. & 0

## FUNKIA, OR THE HARDY PLANTAIN LILY.

These handsome ornamental-foliaged hardy herbaccous plants develope their leaves early in Spring, and in er and Autumn, throw up a profusion of fine Lily-like flower spikes. The leaves range in size from the mature to the gigantic, and from pale green to a deep glaucous green. All are grand plants for edgings, and the large-leaved sorts adapted especially to naturalize in wild gardens; also to grow as distinctive objects in the grass of pleasure parks, etc., as exemplified by their extensive use in Hyde Park. Out of doors in shady and somewhat moist situations, the Plaintain Lily is most decorative; there the foliage is developed to its full size.

No A Detailed List of Plantain Lilies will be found on page 23 of our Bulb Catalogue, 1887, and a special list has just been printed, which will be forwarded on application.

# FRENCH VARIETIES OF GLADIOLUS GANDAVENSIS.

(Autumn-flowering Gladioli.)

CULTURE.—Trench the ground as deep as the soil will admit, intermingling as the work proceeds abundance of rotten manure, and plant the roots at a depth of 6 inches.

PLANTING TO ADVANTAGE.—Groups of three to a dozen roots, planted in the flower borders in distinct, or diversified colours, produce an exceedingly fine effect. The roots should be six inches from each other, and when the plants are sufficiently advanced place a stake in the centre of the group, and fasten the plants to it.

CHOICE NAMED VARIETIES OF GLADIOLUS GANDAVENSIS.

The varieties coumerated were specially selected by us when in bloom this season, from the finest collection of Gladioli in France; and we can confidently recommend each individual sort, our great aim having been to secure only those varieties of the highest type and with the largest flowers and brightest and most distinct colours.

OUR OWN SELECTIONS OF CHOICE NAMED VARIETIES, named vars. 9/, 12/, & 18/. | 2693 3 each of 12 choics named sorts, 25/, 32/, & 48/. | 2694 3 ,, 25 ,, ,, 56/, 84/, & 120. 2690 12 choice and distinct named vars. 9/, 12/, & 18/. 2691 25 ,, ,, ,, 21/, 30/, & 42/. 2692 50 ,, ,, ,, 63/, 84/, & 105/.

### TUBEROSE (Polyanthus tuberosa).

CULTURE.—The growers for Covent Garden pot the Tuberose singly in 5 or 6 inch pots, and plunge in moist bottom heat, withholding water till the foliage appears, then giving it freely, growing on in a house with a high temperature and a m. i-t amosphere, till the flower-buds develope; at this stage, if the plants are for the conservatory or sitting-room, remove to a greenhouse temperature. The bulbs for early flowering, pot as soon as they can be procured, and plunge the pots in a temperature of about 60 degrees. The bulbs for succession keep dry or pot at once, 10 make root-growth; in either case they should be kept in a temperature not below 50 degrees. In Spring, the bulbs may be planted out of doors, and in September, potted up, and flowered under glass, of in the sitting-topin window. under glass, or in the sitting room windo v.

## TIGRIDIA (Tiger-flower).

AMERICAN ROOTS.

No flower is more gorgeously coloured than the Tigridia, or creates so much interest, in as much as each flower has but one day to live; in the evening the bud appears, and in the morning its unrivalled beauty is ceveloped; from the same scape a succession of flowers follow each other for several weeks.

The roots may be planted in March, April, and May; or for pot-culture earlier. Plantings
may be made as late as Midsummer, and if lifted and potted up in September, they will flower
under glass late in Autumn.

#### IRISES.

## IRIS BARBATA, THE BEARDED IRIS, COMMONLY CALLED GERMAN OR FLAG IRIS.

Our collection of Bearded Iris is the most complete in Europe, and in THE FLORIST and POMOLOGIST of December, 1884, a lengthened, classified, and descriptive list is given of the varieties we flowered the preceding summer. Those enumerated in this list are selected from upwards of 200 varieties. The flowers of this Section are all large and handsome, more or less beautifully mottled in the standards, and reticulated in the falls; the beards range from delicate primrose to orange, and the petaloid stigmas frequently enhance the general effect by a contrast in colour. There is no flower, however, that so improves by examination. Its beauty at first sight types the Orebid but on closer examination, we have no besitation in saving there are points of interest, and by a contrast in colour. There is no flower, however, that so improves by examination. Its beauty at hirst sight rivals the Orchid, but, on closer examination, we have no hesitation in saying there are points of interest surpassing the finest of the Orchids. In colours there are the richest yellows, the intensest purples, the most delicate blues, the softest mauves, and the most beautiful claret-reds. There are whites, and printroses, and bronzes of every imaginable shade. Those who have not used this Iris for surrounding artificial lakes and ponds, or cultivated it in the flower borders, shrubberies, woodland walks, and wild gardens, should do so. It is also most valuable wherever a large quantity of cut flowers are required from May to July, as plants when established, will, with good cultivation, increase in size annually till they attain large proportions, each plant yielding 50 to

100 spikes of bloom. 2720 50 in 50 most superb varieties ...215. & 30 0 2721 25 in 25 ,, 105. 6d. & 15 0 2726 Mixed from Squalens 7arieties...pcr doz. 3 2727 Mixed yellow varieties......, 2728 Blue Flag Iris .....pec 100, 105.6d.; ,, 2722 12 in 12 , , , 5s. 6d. & 7 6 2723 Choice mixed ......p. 100 15s.; p. doz. 2 6 2724 Fine mixed ....... , 10/6 , , 2 15.; p. doz. 2 6 2729 Purple Flag Iris ,, 215. 10/6 ,, 2 0 2730 Violet Flag Iris ,, 15. ida vars. ,, 3 6 2731 Snow.White Flag Iris ,, 755. DWARF IRIS, INCLUDING PUMILA, OLBIENSIS, Etc.

Charming Iris, growing 6 to 12 inches high, and flowering during March, April, and May. They succeed in almost any soil and situation, and are valuable for groups in mixed borders, and as edgings.

OUR OWN SELECTIONS.

2732 10 each 12 beautiful varieties.....21s. & 30 0 2735 3 each 12 beautiful varieties ....7s. 6d. & 10 6 2733 5 ... 12 ... ... 10s. 6d. & 15 0 2734 Choice mixed varieties .....per 100, 15s. 2737 Fine mixed varieties ...per 100, 10s. 6d. 2733 5 ,, 12 ,, 10s. 6d. & 2734 Choice mixed varieties .....per 100, 15s.

BEARDLESS SPECIES OF FLAG IRIS.

The Iris offered in this section are perfectly hardy. They are altogether distinct from the Bearded group, and most of them make grand aquatics, especially Aurea, Monneri, Ochroleuca, Goldenstadtii, and the varieties of Pseudo-Acorus, and Spurea, which in water are not only majestic in growth, but have flowers surpassingly beautiful. The varieties of Sibirica, including Orientalis, are graceful in water. All the other Iris in this group, with the exception of Cristata, Iberica, Ruthenica, Stylosa, Susiana, Tectorum and Tuberosa, may be grown as marsh aquatics. Cristata is charming on dry banks and rock-work in sunny sheltered places; Iberica and Susiana require special treatment.

5s. 6d., 7s. 6d. & 10 6

NEW IRIS KÆMPFERI (the Clematis-like-flowered Japanese Flag Iris).

The magnificence of these splendid new Japanese fris surpasses any written description that we could give. CULTURE.—A naturally good adhesive, moist, loamy garden soil, laying well to the sun suits this plant. For example, on the moist Bagshot soil, in Mr. Stevens' garden, the plant makes very strong growth, and flowers with remarkable freedom. When a soil has to be specially prepared, we recommend leaf soil, loam, and peat in equal parts; but manure should not be given, unless as a liquid. We are of opinion that the Iris Kæmpjeri is semi-aquatic in summer, and frequent heavy watering should be given from April to end of August. The plants should be moderately dry in winter.
